

More intuitive way to work

Collaboration Novinky

Cisco Collaboration Launch
Září 2018

Agenda

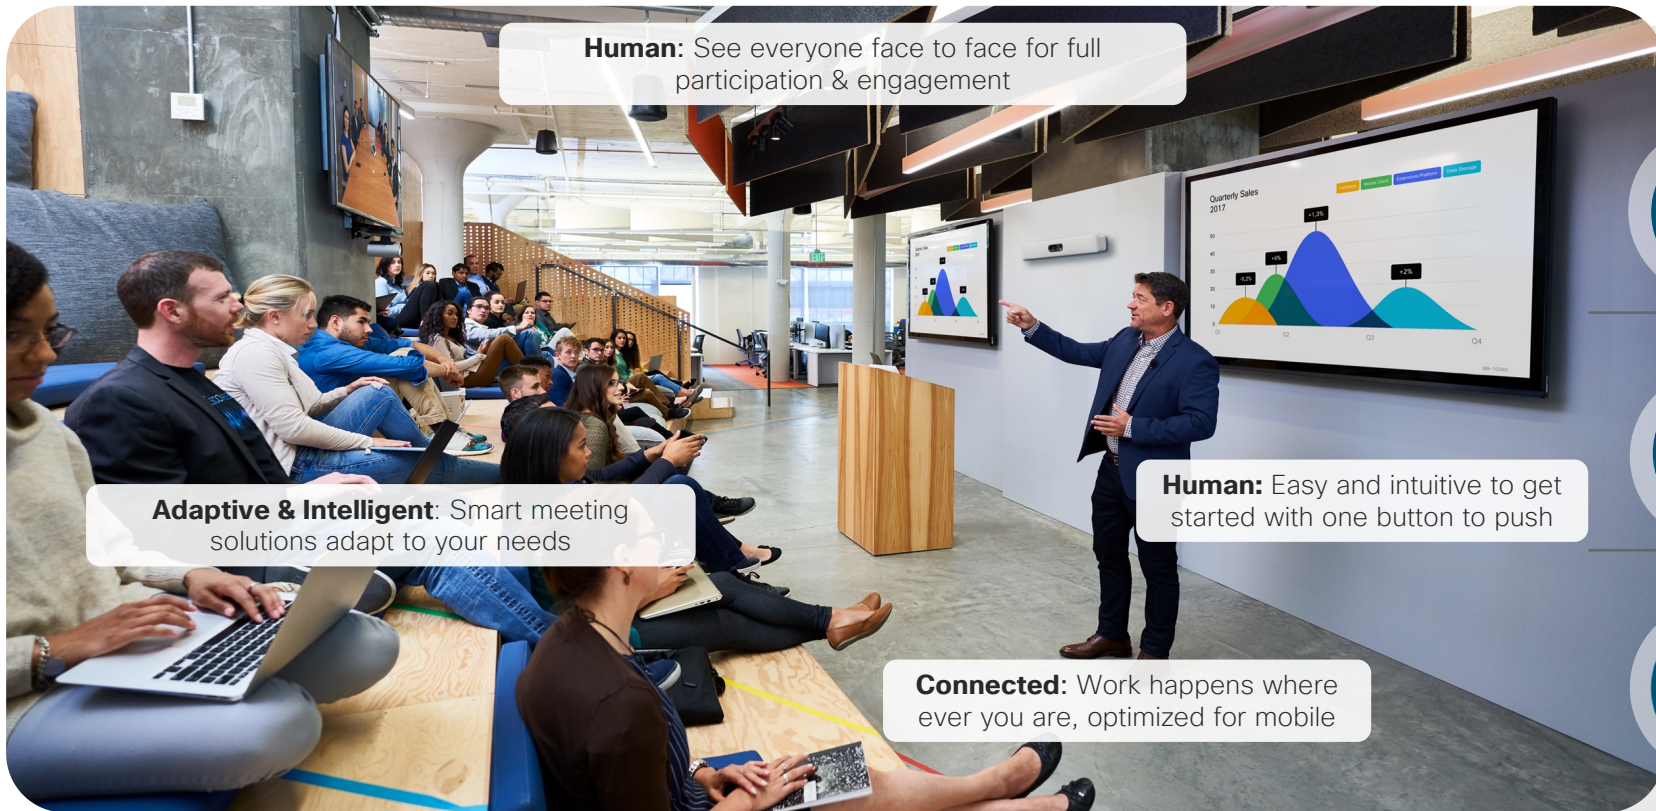

- Introduction – Advanced Meetings
- On-premise Meetings – Cisco Meeting Server 2.4
- Cloud Meetings
 - Webex Edge
 - Building Bridges, not Islands
- Collaboration Devices
 - Roomkit Pro
 - Room 70 G2
 - Room 55D
 - Headsets

Evolution of Meetings in a Digital Economy

How Do You Create Experiences that Matter for Your Distributed Teams?

Work Intuitive: Better Meetings

Human: See everyone face to face for full participation & engagement

Adaptive & Intelligent: Smart meeting solutions adapt to your needs

Human: Easy and intuitive to get started with one button to push

Connected: Work happens where ever you are, optimized for mobile

Human

Adaptive & intelligent

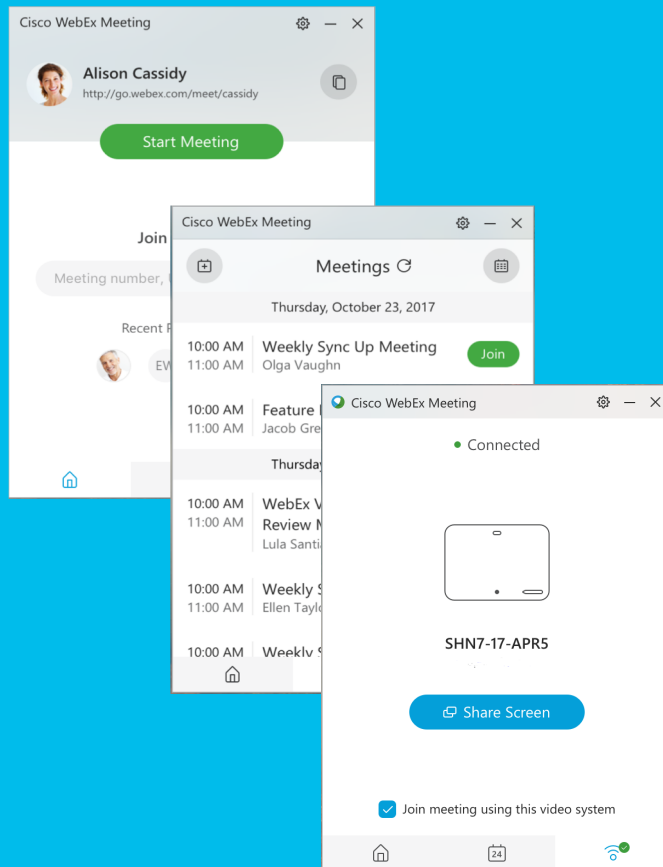

Connected

Delivered over a flexible platform for a path to the future of work

Better Meeting Experiences

The New Webex Meetings Experience

adoption
of the
latest
release

Universal Way to Join

Join

Same experience for any Cisco meeting deployment on-prem or cloud based

Intuitive experiences make the evolution to the cloud seamless

November
2018

Universal Way to Meet

@Meet

Simplify scheduling with @Meet

Same experience for any Cisco meeting
deployment on-prem or cloud based

On-premise Meetings

Meeting Server 2.4

Cisco Meeting Server priorities

Experience

- Align scheduling, joining, and in-meeting experiences
- Filling gaps from legacy products experience

Simplification

- Simplify manageability
- Enable self-service
- Simplify architecture

Interoperability

- APIs / Solution plus
- Microsoft/ Google Interoperability
- Browser support

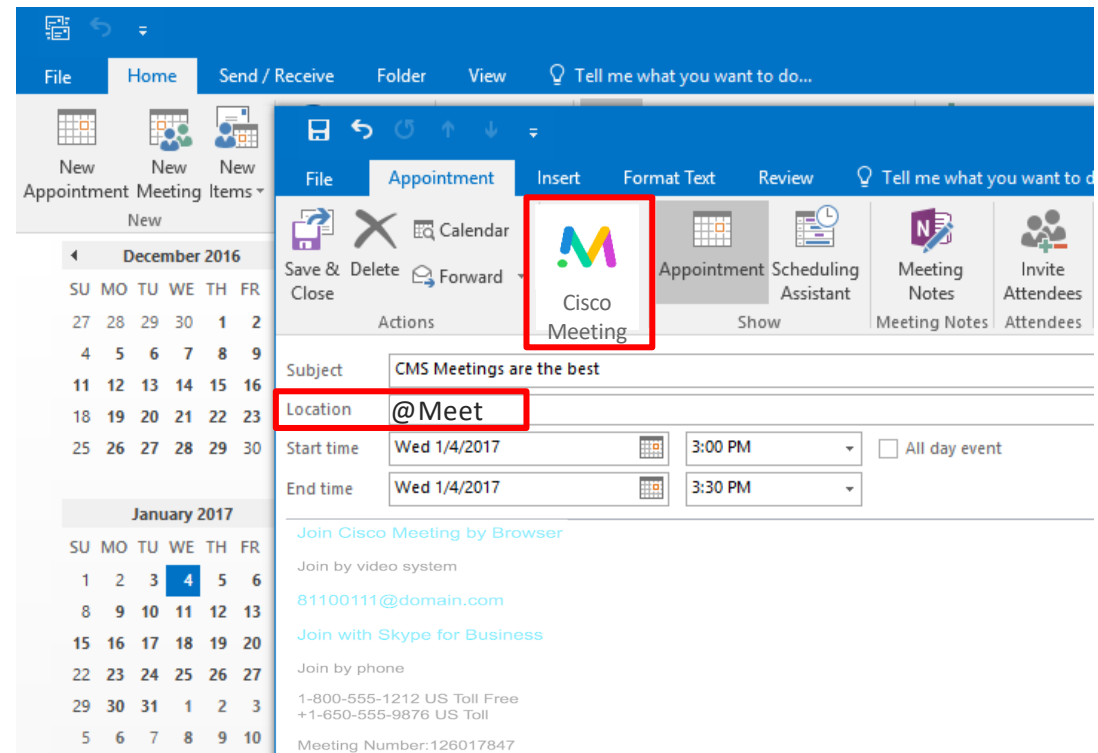

Cisco Meeting Server **What's new!** Details

CMS with “@Meet” Scheduling

Phase 1: O365 Exchange and Google Calendar

- Common scheduling paradigm between CMS and Cloud meetings
- Optional add-in button for additional simplicity (populates the “@meet” info for the user)
- Join info updated in the invitation sent to all participants
- Support for O365 Exchange and Google Calendar (Premises based Exchange future)

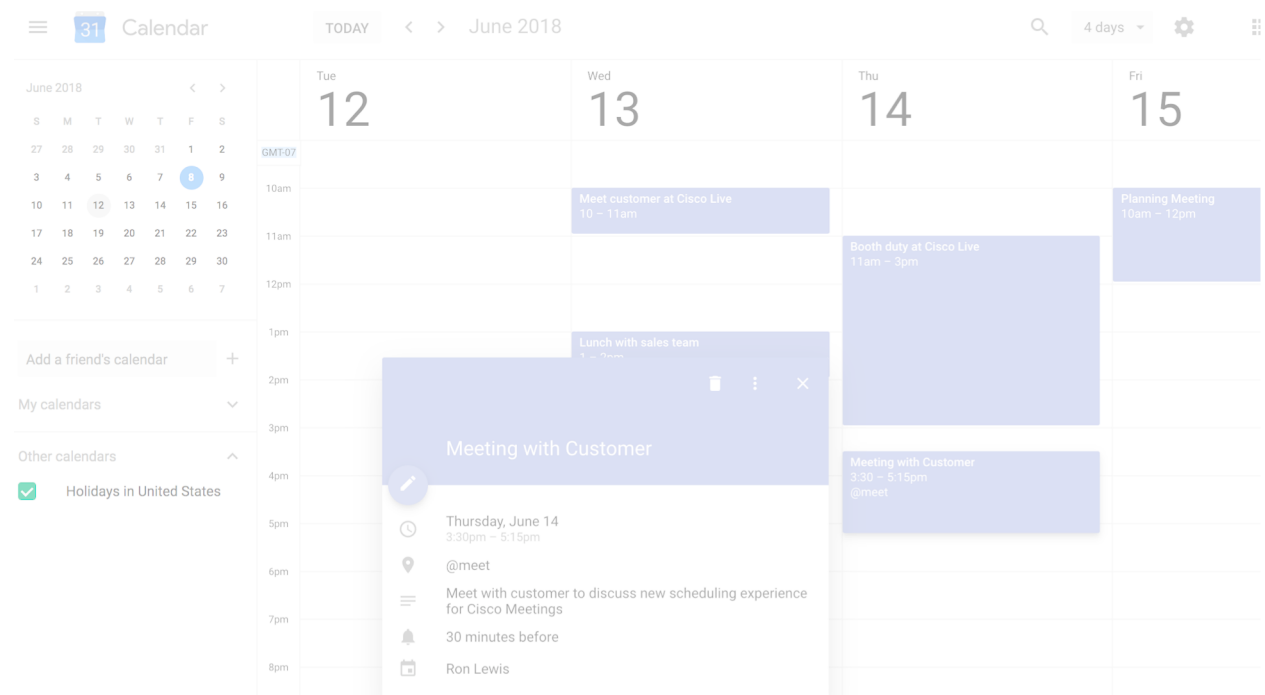

CMS with “@Meet” Scheduling

Google Calendar example

- Join info updated in original invite
- Any calendar client with Google Calendar
- OBTP on-prem & cloud registered
- Click to join (WebRTC, Skype for Business, Jabber)
- Dial in phone numbers list
- Per org config for @Meet:
 - CMS/ TMS Scheduled Meeting
 - Webex scheduled meeting
- Enables future migration to cloud

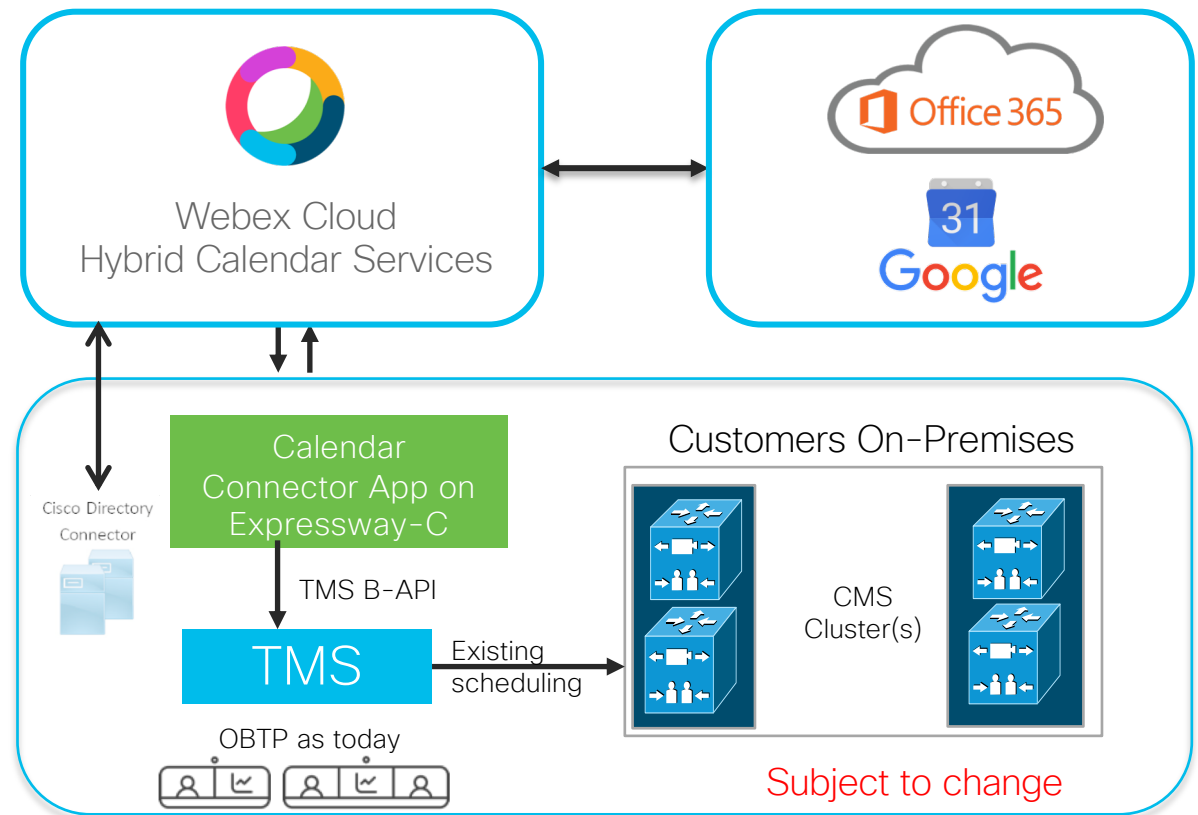

CMS with “@Meet” Scheduling

Phase 1: O365 Exchange and Google Calendar

- Requires TMS15.7 and Expressway-C with Webex Calendar Connector
- Room systems get big green join button
- Conference service type “TMS” for CMS scheduled meetings
- Users are imported to Common Identity and have calendar service enabled
- Coexists with existing TMS scheduling

CMS with “@Meet” Scheduling

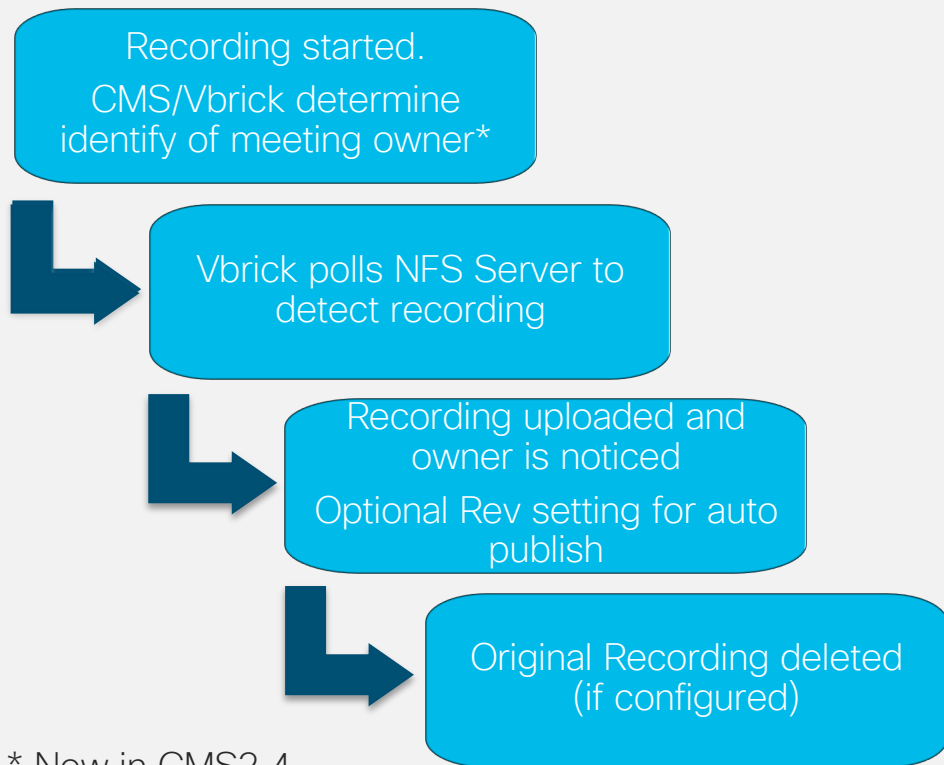

Licensing requirements

- TMS core with appropriate device licenses (no changes)
 - TMS licensed per endpoint for management and/or scheduling
 - Base TMS Starter kit includes first 25 endpoints with MSFT + 10 servers (CMS, CUCM, VCS)
 - Flex or ELA includes base licensing and MSFT TMS-XE licensing
 - CCA does not require a device license
- Options for @meet scheduling with Expressway & Webex Calendar Connector
 - Leverage existing TMS-XE licensing per endpoint
 - A la carte (25 quantity) or “Appint” (server license)
 - New customers should purchase B-API (or TMS-XE MSFT) licensing
 - PoC customer using both TMS-XE software and @meet needs two B-API licenses (or temp trial)
- Customer needs Webex Org/CI with at least 1 admin (M1) account for configuration via Control Hub. Webex per organizer licensing is not required for on-prem only meetings

CMS Recording

Improved Vbrick uploader

Easily record
and live
stream from
video
endpoints

Extend the
reach of video
to 10,000's of
viewers

Audience
interaction
with real time
chat, polling,
and Q/A

Single
Repository
for all video
Content

CMS Recording

Additional enhancements

- Experience: 1080p recording capability
 - Configure the recording resolution of the Recorder:
 - Audio only or 720p (default) or 1080p
- Simplify:
 - Understand via API if “Lync client is recording a call”.
 - `endpointRecording = true` in GET on `/calls/<call id>` means Skype client is recording the conference
 - CDR Record `callEnd` has a new parameter:
 - `endpointRecorded` (means Lync client recorded the meeting)

CMA WebRTC – Expanded browser coverage

- Existing CMS 2.3 WebRTC
 - Chrome for PC, Mac, and Android
- New with CMS 2.4
 - Firefox for PC or Mac
 - Safari on Mac*
- Enhanced Chrome on Android for small screen
- Experience compliments new Jabber 12.5 experience with Guest Join

Cisco Meeting Management

CMM1.1: TMS scheduled meeting support

- Monitor TMS scheduled conferences
- Improved meetings filters
- Cross launch to TMS meeting page
- No TMS Booking API license needed

Cisco Meeting Management

CMM1.1: Improved operator controls

- Speaking/noise indication
- New filters to easily find speakers

The screenshot shows the Cisco Meeting Management interface. At the top, there are filter buttons: 'Activity', 'Important', 'Speaking', 'Status', 'Connected', and 'Disc'. The 'Activity' button is circled in red. Below the filters, it says 'Showing 2 of 2 available participants'. A table lists the participants:

<input type="checkbox"/>	1 ▲	Participant name
<input type="checkbox"/>	✓	Sandra Ty
<input type="checkbox"/>	✓	Sally Wood@10.209.81.72

The speaker icon in the second column of the table is circled in red.

Cisco Meeting Management

CMM1.1: Improved operator controls

- Make participant(s) important controls
- Places important speaker(s) in prominent pane of layout

Architecture Update

Microsoft Interop

- Expressway required for O365/B2B
- Expressway between CMS and SfB Front End servers, X8.11.1 required

CMA WebRTC

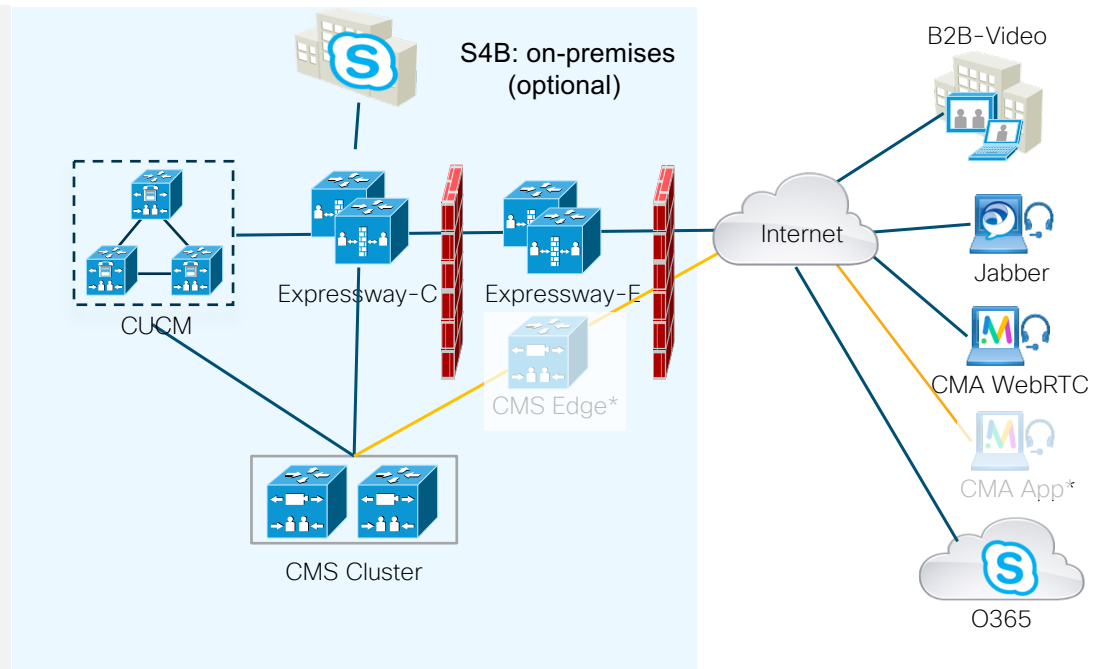

- Improved support with 443 over TCP

CMA thick app*

- Requires CMS Edge*

CMS H.323 Gateway

- End of software maintenance support, use Expressway for H.323 mediation

* Jabber is the recommended thick client

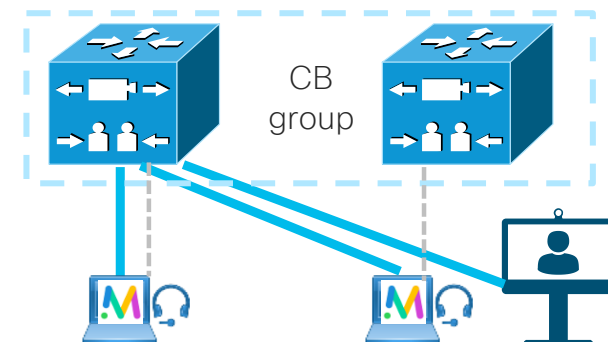

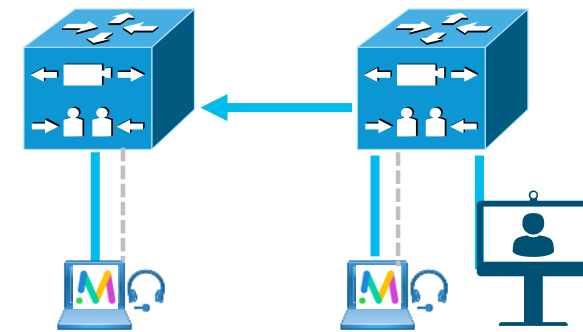

CMS Call Bridge Groups for Expressway deployments

Scaling Expressway Deployments

- CMS 2.4 with Expressway 8.11
- Call Bridge group support for Expressway registered SIP endpoints
- Increase platform scale for traditional video customers leveraging Expressway
 - Reduces distribution links between call bridges

Subject to change

Cisco Meeting Server Interoperability

CMS 2.4 Enhanced meeting controls in Dual Home Conferences

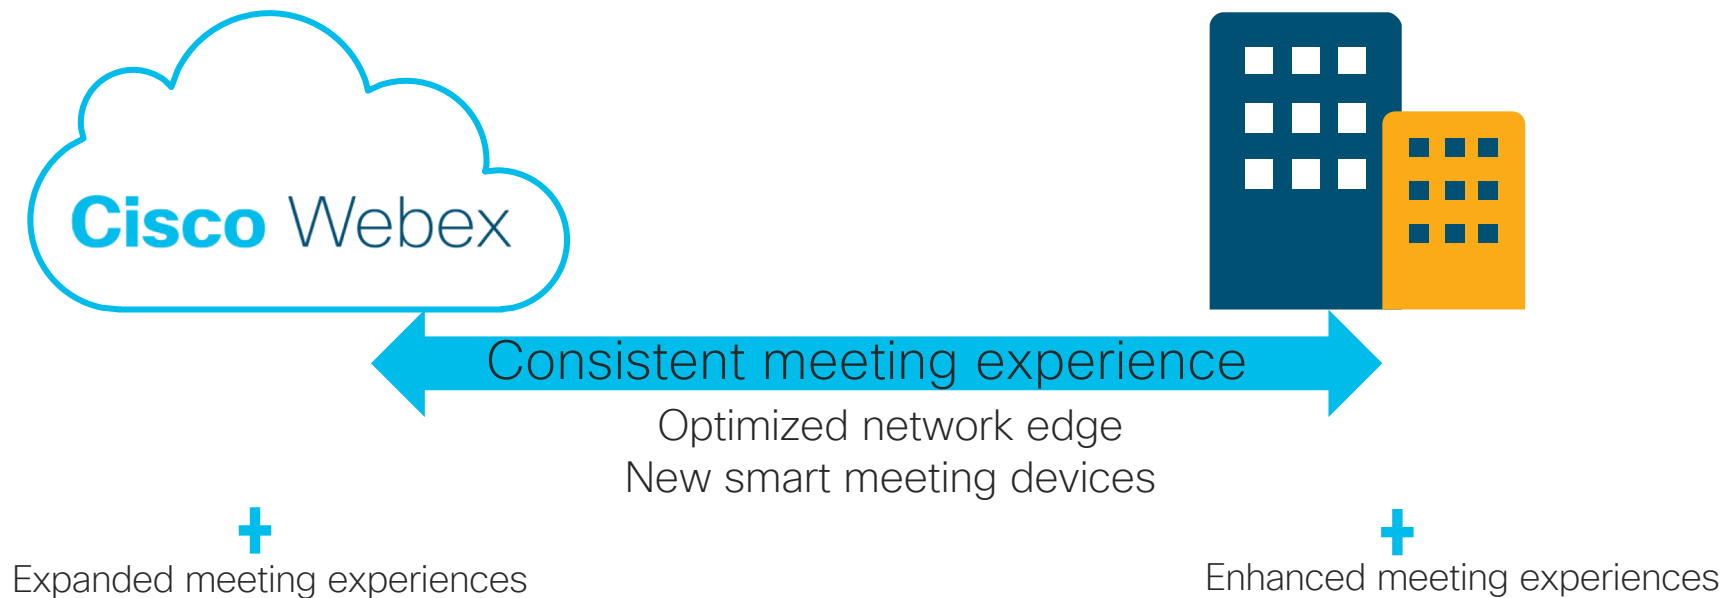

- Microsoft clients can mute and un-mute SIP endpoints
- Microsoft clients can mute all and un-mute all (including SIP endpoints)
- SIP endpoints will display an onscreen message that they have been muted / unmuted
- SIP endpoints will display a recording indicator when Microsoft clients start a recording

Better Meetings from the Cloud

Empowering Customer Evolution to Cloud Journey

Cloud First, Not Cloud Only

The Cloud Meeting Landscape Today

 **37%**
Time spent in meetings

 **\$\$\$\$**
PSTN & dedicated Internet bandwidth are expensive

 **50%**
enterprise voice traffic ends up on a conference bridge

 **10⁺ years**
IT transforming networks for VOIP & Video efficiency

— PSTN
- - - - - Public Internet

The Cloud Meeting Landscape Today...Yet

Cisco Webex Global Backbone

The Only Cloud Service Built and Optimized for Real-time Media

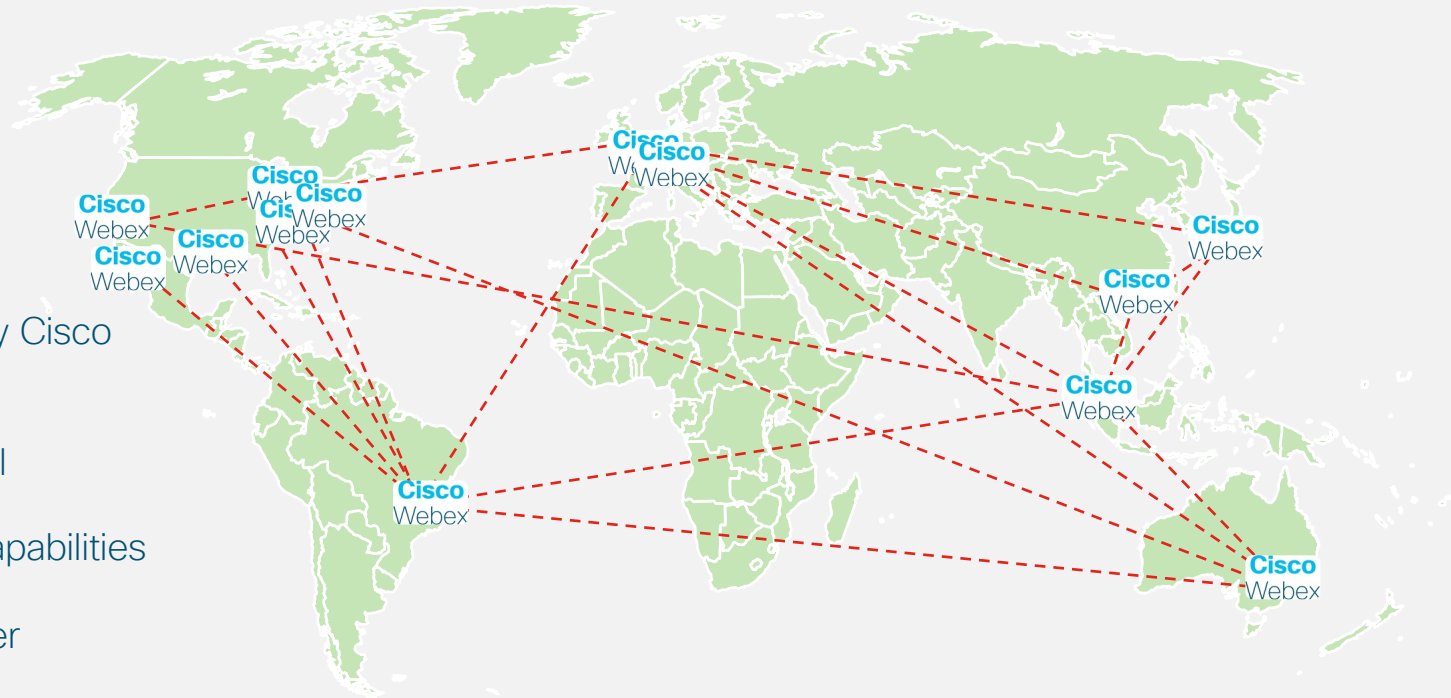

Purpose built for real-time, intelligent, globally distributed meetings

End-to-end controlled and monitored by Cisco

Up to 20G links and customized hardware for security and edge traversal

End-to-end Cisco network & security capabilities

Attendees join via the closest data center

Cisco Webex Edge Service

Reshaping the edge to maximize the power of the Webex cloud for
audio, video and content

Purpose-built for collaboration and
real-time media

Customer Premises

Leverage existing investments

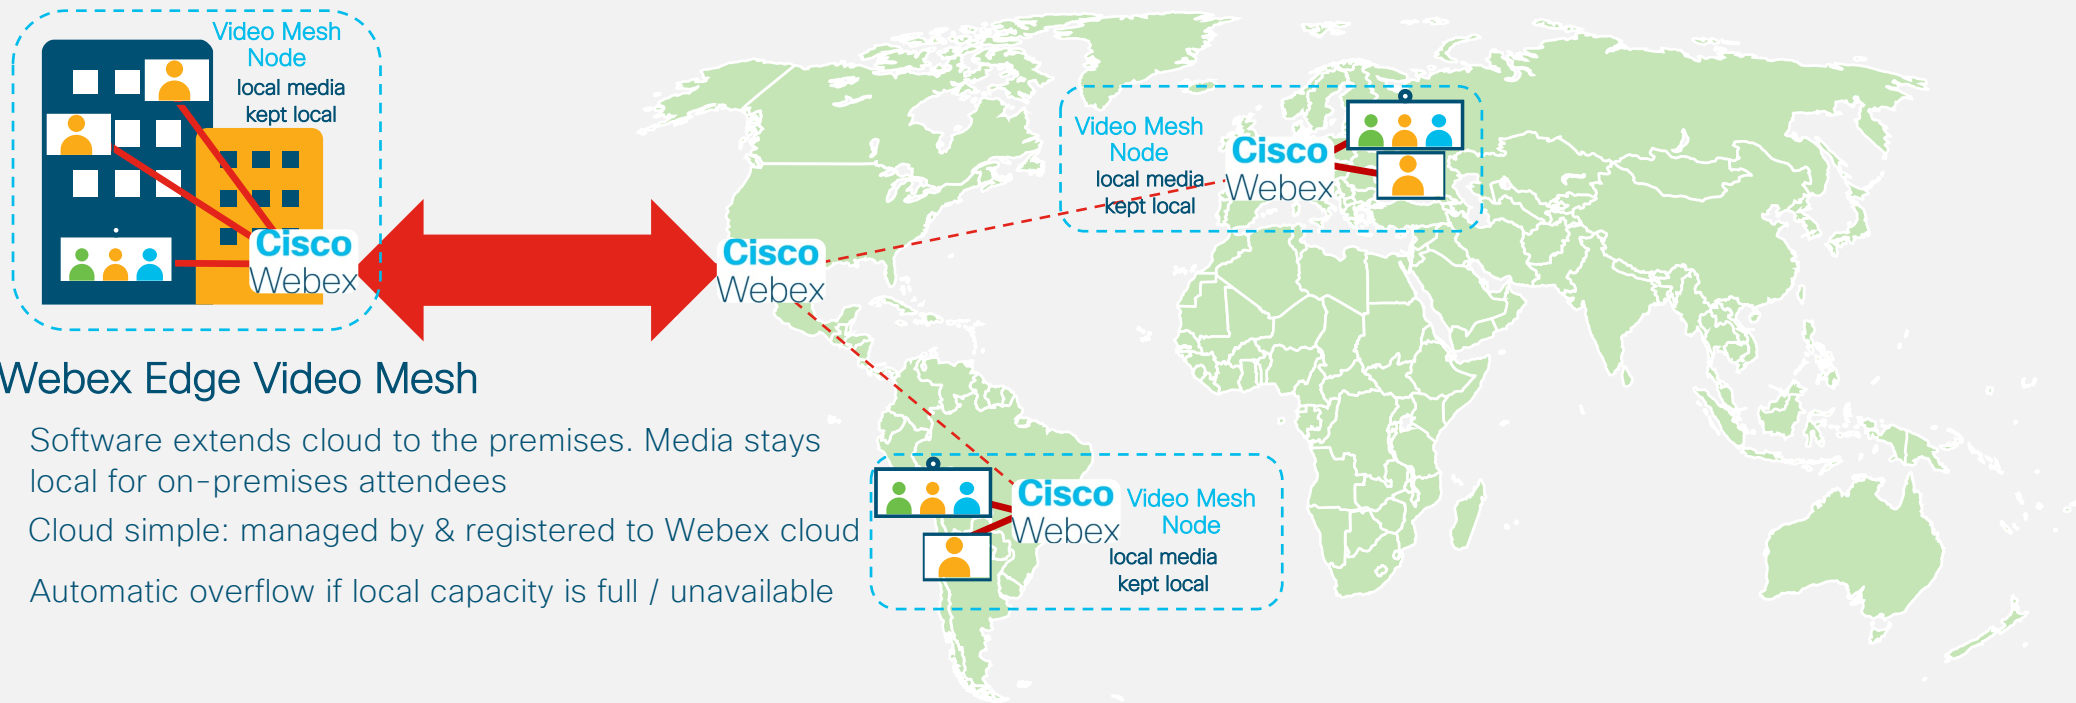

Enhanced, Consistent
Quality

Cost Savings

No Change in
User Behavior

Webex Edge Video Mesh

On-premises Video Quality and Bandwidth Savings

Webex Edge Video Mesh

- Software extends cloud to the premises. Media stays local for on-premises attendees
- Cloud simple: managed by & registered to Webex cloud
- Automatic overflow if local capacity is full / unavailable

Capabilities of Webex Edge

Intelligent Audio + Industry-Leading Media Experiences+ Direct Connection

VoIP Adoption for Meetings

Changing habits requires simplicity and quality

October
2018

Webex Edge Audio

Transparently decouples PSTN from Webex to lower costs & improve quality

Not just the
PC

From the desk
phone

From any phone

Even cell
phones

Partners and
customers too

Reduce PSTN costs. Intelligent wideband audio to more scenarios.
No change in user behavior

Webex Edge Audio

Intelligent Audio Routing

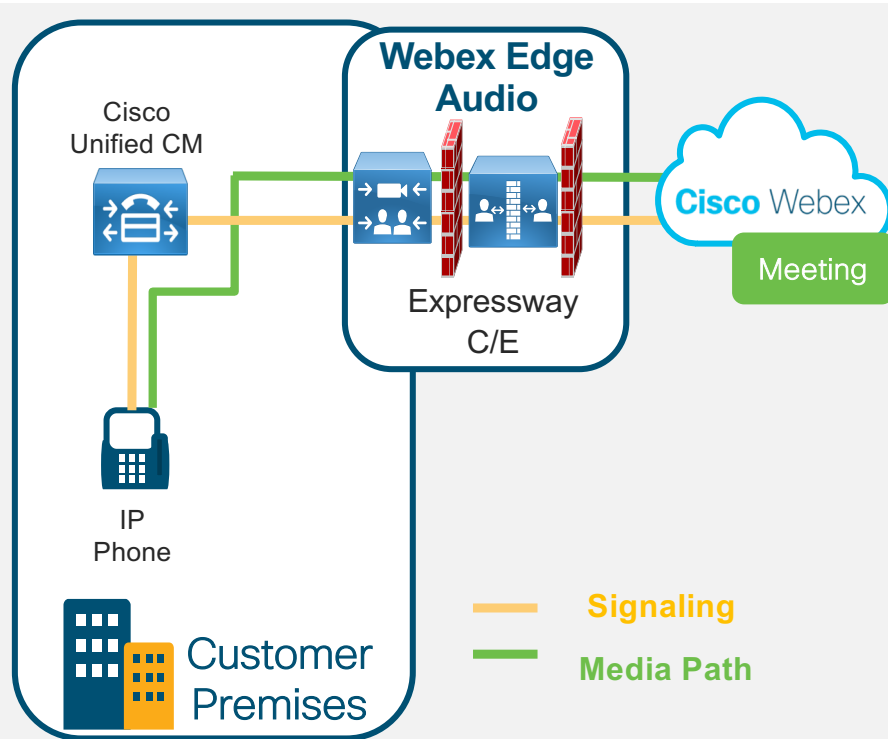

- Applicable to any size business
- Intelligent audio routing: integrating Webex with Unified CM
 - Creates end-to-end VoIP path for Unified CM registered devices (callback and dial-in)
 - Uses company's own PSTN for any other device (callback only)
- No SIP trunks, no direct peering arrangements or additional traversal elements required
- Geo-country code configurable
- Included in Collaboration Flex Plan – no extra charge. No port charges on Expressway
- Supports Webex Meetings, Events, Training

Customers save as much as 20%
No user training, no change in user behavior, easy for IT

Webex Edge Audio

Webex Edge Audio

Intelligent audio routing

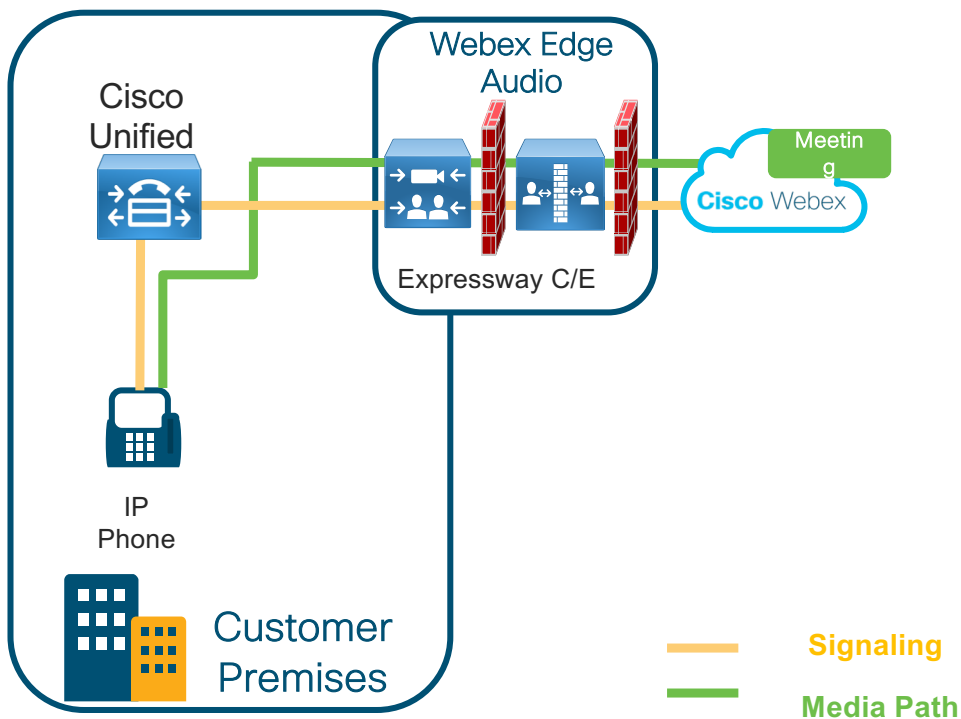

- Intelligent audio routing: integrating Webex with Unified CM
 - Creates end-to-end VoIP path for Unified CM registered devices (callback and dial-in)
 - Uses company's own PSTN for any other device (callback savings)
 - No SIP trunks or peering arrangements required
- Geo-country code configurable
- Included in Collaboration Flex Plan – no extra charge. No port charges on Expressway
- Supports Webex Meetings, Events, Training

No user training, no change in user behavior, easy for IT

Cisco Webex Edge Audio

Architecture requirements

Unified CM support only

- 10.5 or later

Cisco UCM registered IP phones

- Supporting G.711 or G.722

Expressway support only

- X8.10 or later
- Can use existing Expressway C/E deployment
- Audio scale dependent on Expressway deployment and services enabled.

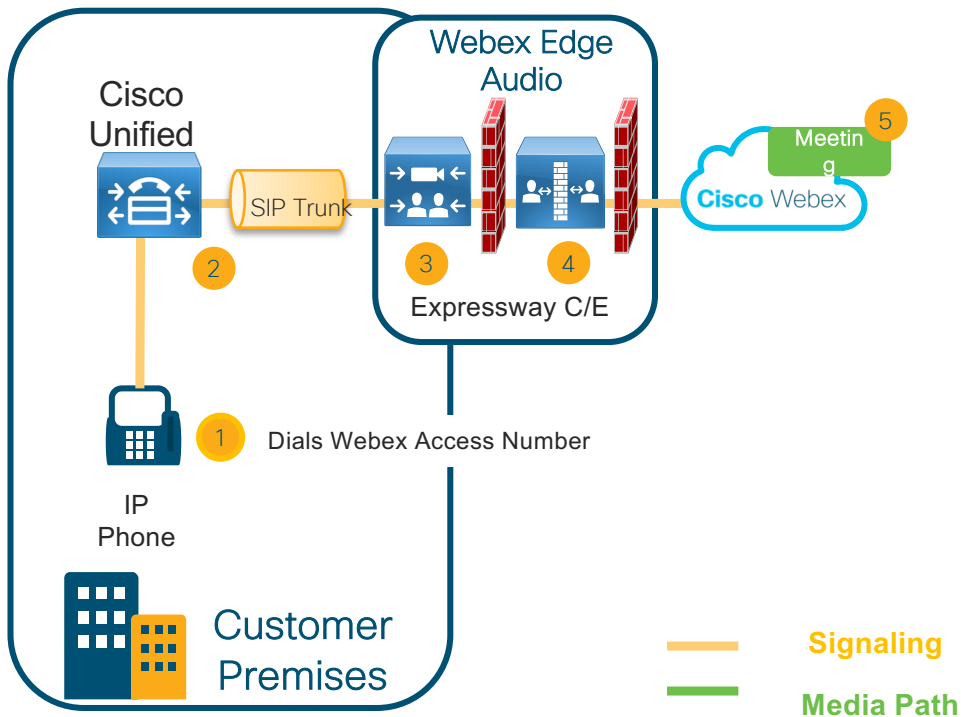

Webex site

- WBS 33.x or higher
- Included in Flex, A-WBX and A-SPK SKU need the Webex Edge Audio package
- Not available on CCA-SP, CCA-ENT or TSP sites.
 - Requires migration to Webex Audio Site

Requires a signed certification from a Cisco trusted Certificate Authority (CA)

Cisco Webex Edge Audio

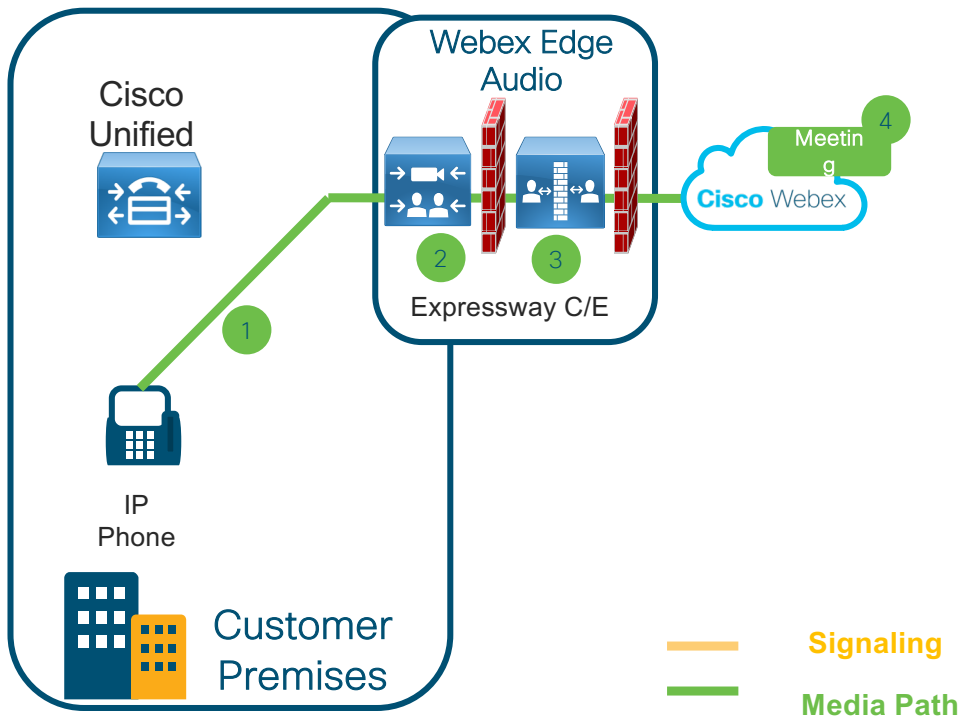

Dial in Signaling Call Flow

1. Endpoint dials Webex Audio access number.
2. Cisco UCM matches the number and routes as +E.164 through SIP trunk to Expressway-C.
3. LUA script on SIP trunk to Expressway-C applies transformations required for correct routing to Webex
4. Expressway-C sends request to Expressway-E.
5. Expressway-E routes call to the Webex cloud.
6. Meeting resources are setup.

Cisco Webex Edge Audio

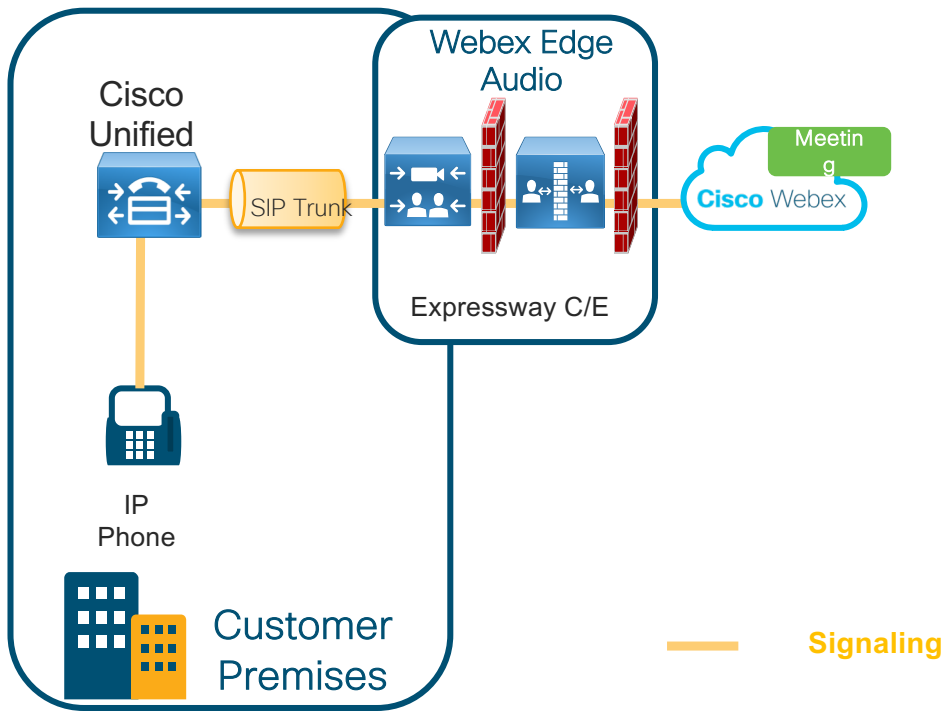

Dial in Media Call Flow

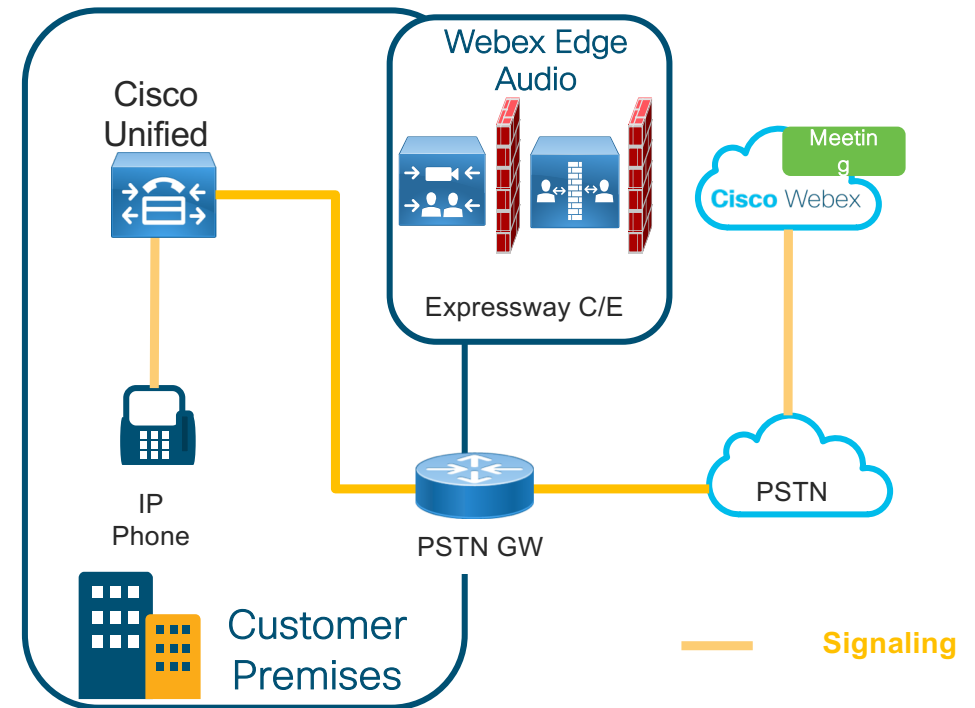

1. The IP phone sends media to Expressway-C
2. The Expressway-C sends media to Expressway-E via the traversal zone
3. The Expressway-E sends media to the Webex cloud.
4. IP phone's audio is mixed into the meeting and it hears the other participants.

Cisco Webex Edge Audio

Dial in Signaling Call Flow with and without Edge Audio configuration

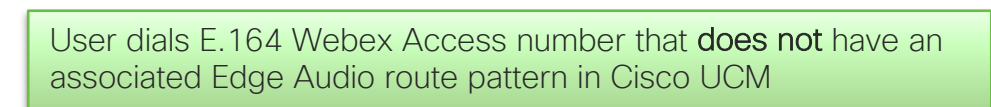

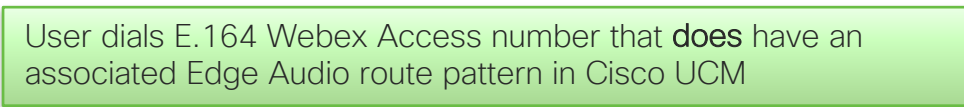

User dials E.164 Webex Access number that **does** have an associated Edge Audio route pattern in Cisco UCM

User dials E.164 Webex Access number that **does not** have an associated Edge Audio route pattern in Cisco UCM

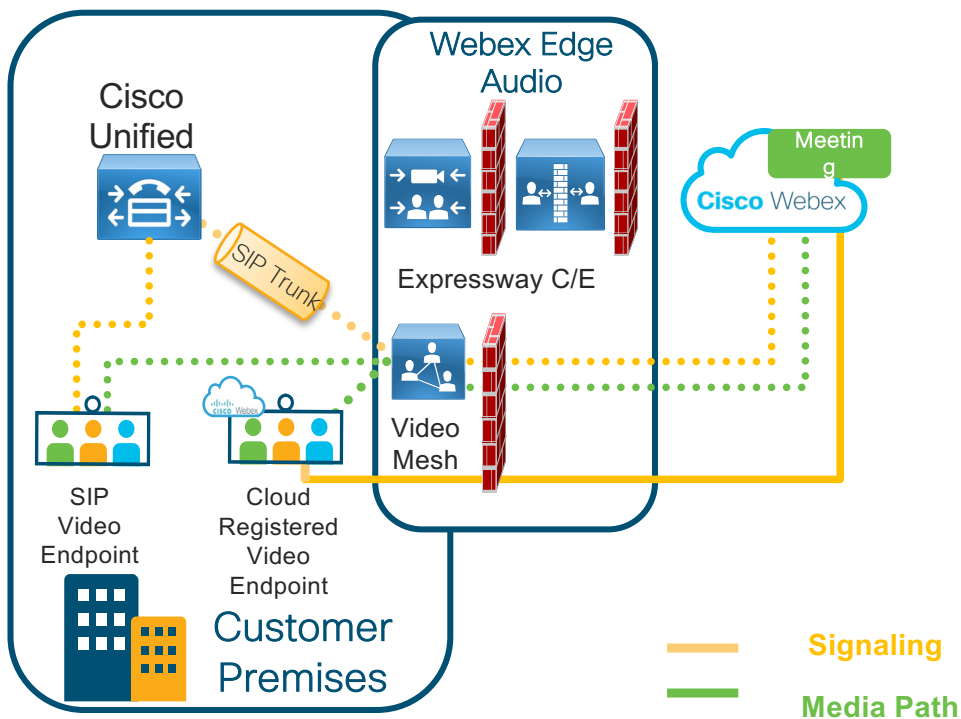

Dial in Media Call Flow with and without Edge Audio configuration

Webex Edge Audio
+ Video Mesh

Cisco Webex Edge Video Mesh

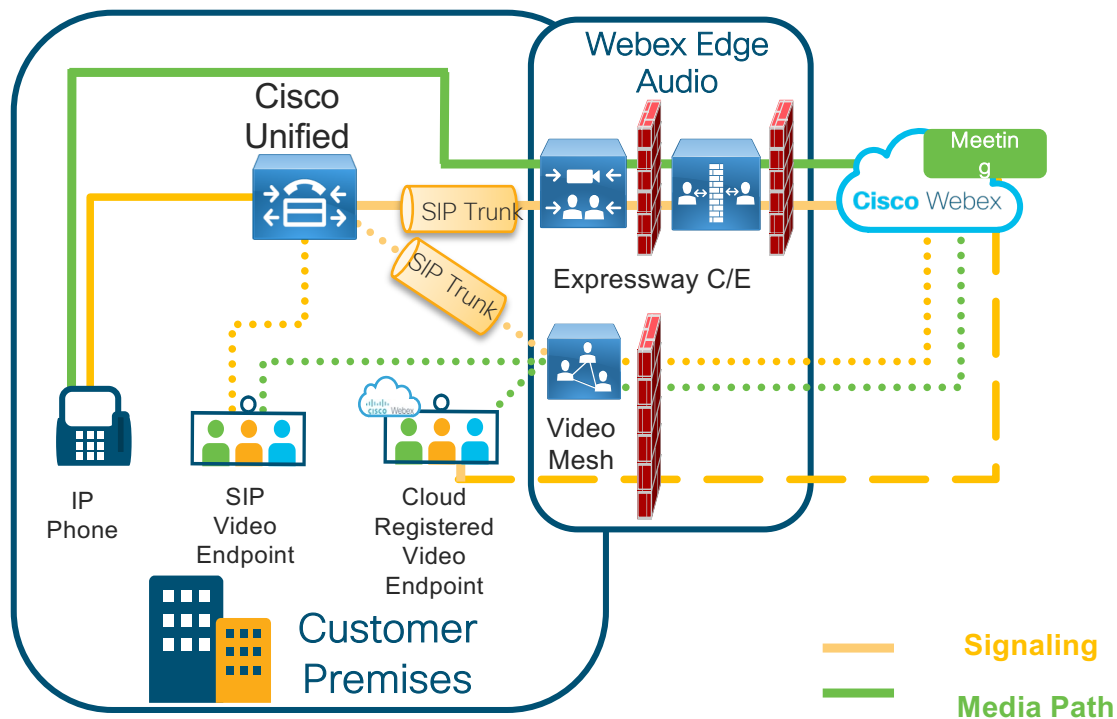

Architecture

- Video Mesh is part of the Webex Edge solution
- Video Mesh functionality is the same, handling the Main Video, Speaker's Audio and Content being shared by the video devices in the meeting that can utilize Video Mesh
- Video Mesh communicates directly to Webex cloud and terminates the media for cloud registered device and SIP video endpoints for dialing into Webex meetings.
- Webex Teams, Webex registered devices and Cisco UCM registered SIP video endpoints use Video Mesh. Webex Meeting app or Webex Teams browser does not use Video Mesh.

Cisco Webex Edge Audio + Video Mesh

Signaling and Media

- Video Mesh and Edge Audio work independently but are part of an overall solution when connecting to a Webex meeting.
- IP phones dialing in or call back to the Webex meeting use +E.164 numbers and utilize the Expressway to connect to the Webex meeting. (Webex Edge Audio)
- Cisco UCM registered SIP video endpoints, Webex registered devices and Webex Teams app dial SIP URIs to the Webex meeting and use Video Mesh for local media processing.
- Webex Meeting app goes directly to the Webex Cloud.

Cisco Webex Room Kit Pro

Backplane Overview

Key Physical I/O Enhancements

Rich set of video and audio inputs, flexible media engine, and support for up to three screens enable a variety of use cases, adaptable to your specific needs.

Video inputs/outputs

6 concurrent video inputs:

- 3x HDMI (up to 4Kp30)
- 2x HDMI (up to 1080p60)
- 1x SDI (up to 1080p60)

3 video outputs:

- 2x HDMI (up to 4Kp60)
- 1x HDMI (up to 4Kp30)

Audio inputs/outputs

- 4x balanced line input (Euroblock)
- 8x microphone inputs (Euroblock)
- 3x HDMI input (input #1 support ARC)

Other

Chipset:

Nvidia Tegra X2 with GPU

Wireless:

WiFi 802.11a/b/g/n/ac 2.4GHz/5GHz for LAN. 2x2

Bluetooth:

Bluetooth 4.0 LE for wireless sharing and proximity
2 antennas

Software Enhancements

Bringing Room Kit system software technology to the top-of-the-line integrator codec

Embedded conferencing

- 4-way MultiSite (up to 15 Mbps total bw)

Content

- 4Kp15 in-call content share
- HDCP ready

Wireless sharing

- Cisco Webex Teams app @4Kp5
- Cisco Proximity app @1080p5

In-room Control

- Customizable GUI and support for control of 3rd party peripherals through the XAPI

Intelligent camera control

- Speaker tracking with Quadcam and SpeakerTrack 60

Other

- Noise suppression
- Diagnostics
- Metrics

Room Customization – Source Compositing

- Combine sources to send a composited image in Main or Dual stream/Presentation channel
- Remote side will receive multiple views from the source room
- Integrators has flexibility to create custom solutions
- Available in all endpoints with more than one input
- Equal layout available for up to 6 sources locally and 4 sources remote
- Simplified and improved replacement for TC Console functionality

Room Customization - Source Compositing

- Example of sending 4 sources composited in presentation channel

Local end

Remote end

Detailed I/O Overview

A – Antenna connector

B – 6 x Line outputs (Euroblock, 3,5mm)

C – 8 x Microphone/Line inputs (Euroblock, 3,5mm)

D – GPIO port (Euroblock, 3,5mm)

E – COM port (Euroblock, 3,5mm)

F – Antenna connector

G – Ground (Protective earth)

H – Main power input (1.3-0.6A, 100-240V ac, 50/60Hz)

I – 2 x HDMI outputs with audio and video (1-2), 4Kp60

J – HDMI output with audio and video (3) 4Kp30

K – 2 x Camera inputs (HDMI 1-2) 1080p60

L – 3 x HDMI inputs with audio and video (3-5) 4Kp30

M – Camera input (3G-SDI/HD-SDI, 6) 1080p60

N – 2 x USB 2.0, type A

O – USB 2.0, type B

P – Maintenance (micro USB)

Q – Factory reset

R – Network (Ethernet) 1Gb

S – 2 x Camera control (Ethernet)

T – Ethernet PoE – internal network port for Poe device

U – Touch panel (user interface, Ethernet PoE)

V – Status LED

W – Power On/Off
