On the plant floor, as connectivity increases, so does complexity, and so do security concerns. Every new asset you put on the network is another security consideration. Enable a real-time view of your entire network topology, with alerting, segmentation, and more. So both IT and OT stay informed of what they need to know to ensure continuous operation.

Intent-Based Security for Industrial Networks

- Comprehensive security built for the needs of both IT and OT
- Manufacturer is at greater risk
- Connected things will hit 30 billion endpoints by 2020, and by 2025 that number could reach 80 billion

Intent-Based Security for Industrial Networks

- Comprehensive security built for the needs of both IT and OT
- Manufacturer is at greater risk
- Connected things will hit 30 billion endpoints by 2020, and by 2025 that number could reach 80 billion

- Enables IT to predefine security policies and automatically enforce them based on input and intent from the OT team
- Cisco IND interfaces with Cisco Identity Services Engine (ISE). OT staff can input their intent, and Cisco IND dynamically applies the correct security policies for the scenario, based on previous IT policy definition
- Cisco Stealthwatch® provides the deep network visibility and analytics that IT teams need to build the best possible security policy strategy and to keep up-to-date on network activity

1. Cisco 2018 Annual Cybersecurity Report

69% of organizations believe OT is a viable attack vector in 2018.

On the plant floor, as connectivity increases, so does complexity, and so do security concerns. Every new asset you put on the network is another security consideration.
