

Cisco Security for Retail

Retail cyberattacks and employee theft are on the rise

50% of retailers have had a cyberattack in the past year (Thales Group).

The average cost per incident of employee theft is \$1,551 (National Retail Federation).

E-commerce retailers deal with an average of 206,000 web attacks per month (Signa Sciences).

Stay competitive

Retail security solutions must keep pace with the shopping landscape and become more comprehensive to:

Safeguard goods and inventory to reduce shrinkage resulting from theft and fraud.

Build brand loyalty by protecting consumer data and privacy.

Connect stores and prioritize traffic to ensure uptime and reliability.

Safeguard your retail operations with Cisco security

Cisco uplevels your security to provide safe and compliant environments for associates and customers.

Within minutes, Cisco blocks domains associated with malware, phishing, ransomware, and unsolicited cryptomining, before ever reaching your network or users.

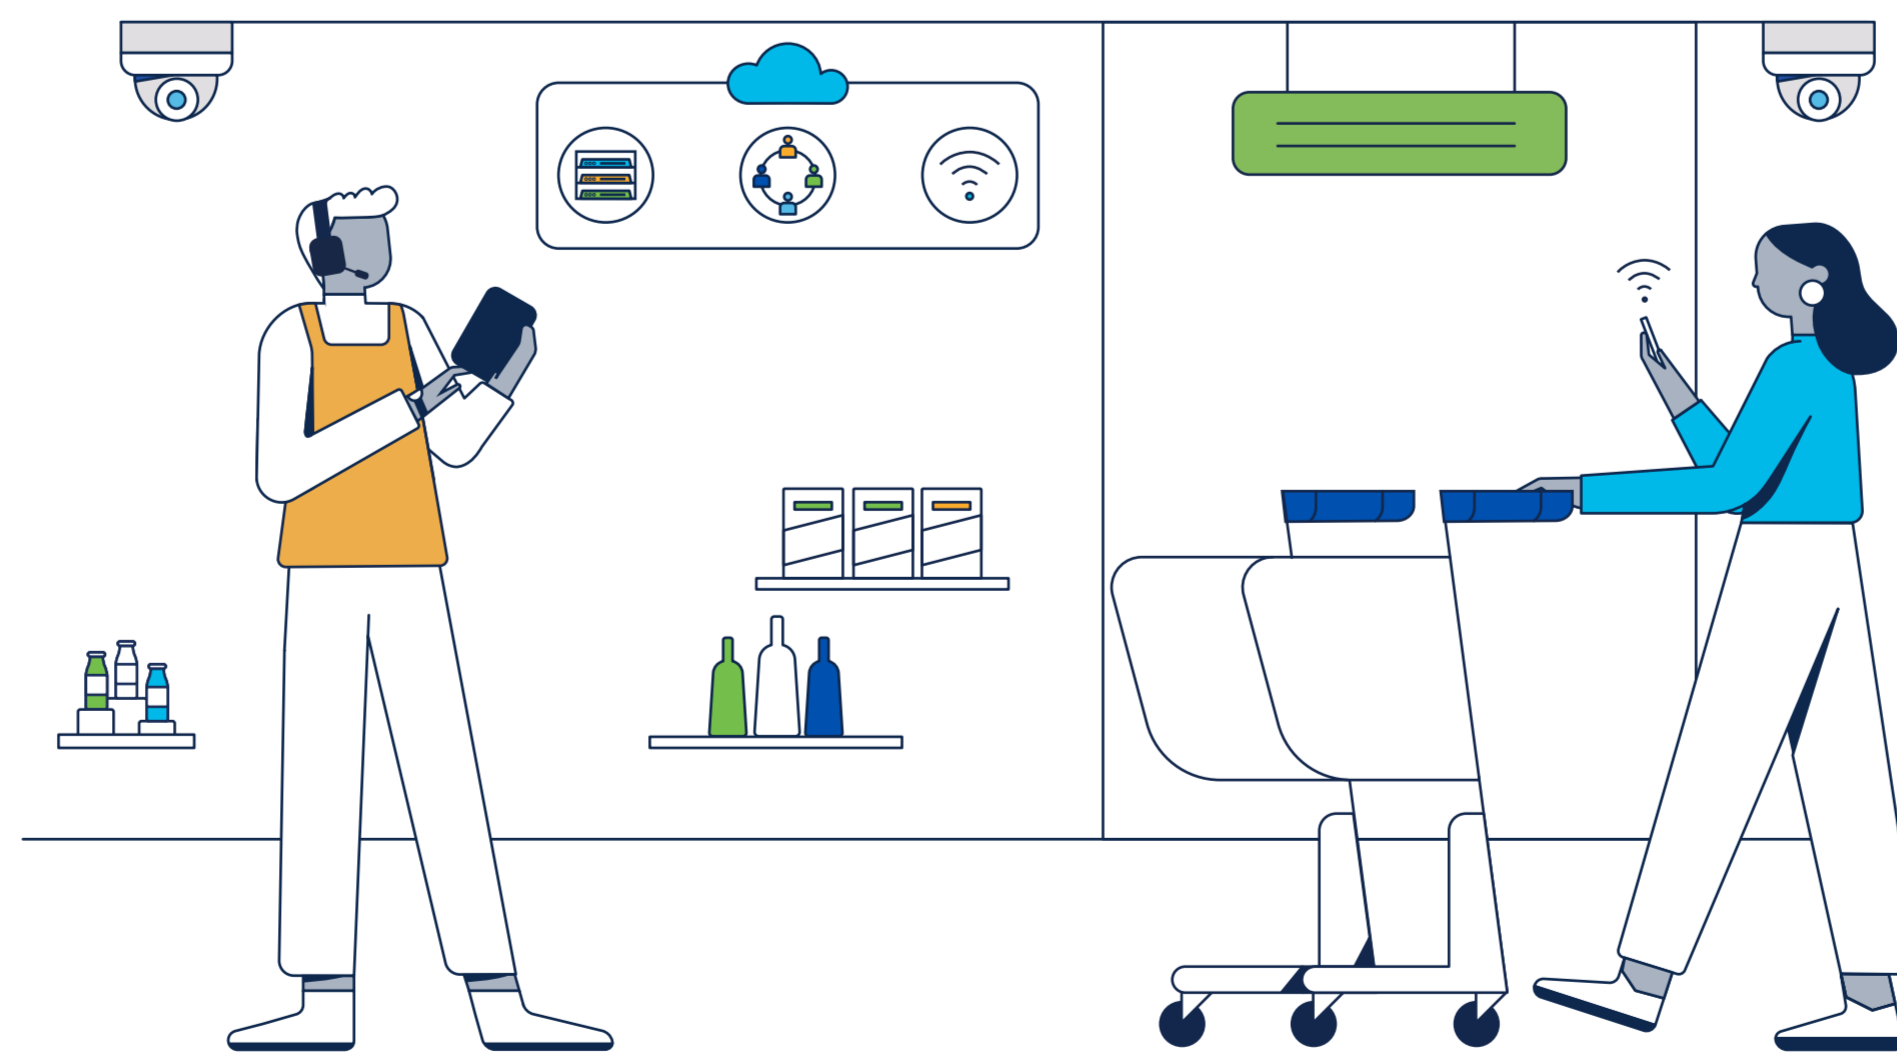

Cisco deployment is secure, resilient, and scalable between stores, corporate locations, and the cloud.

Cisco mitigates cybersecurity risk, detecting attacks and blocking threats.

Security solutions lead to a competitive advantage

Retailers that successfully implement security solutions develop a competitive advantage to continue their digital transformation without the deterrent of security incidents.
