CHAPTER 1

VMWare VDI Scalability Testing on Cisco UCS B200 M4 Server with UCS Mini

- [Overview, page 1](#)

Overview

When deploying your virtual desktop solution, choosing server hardware that is powerful enough across the compute and memory dimensions to support a large number of virtual desktops is crucial. The more virtual desktops per server you can support, the fewer servers you need to buy to provide virtual desktops to support your desired number of users.

Cisco UCS Mini is the ideal solution for customers who need fewer servers but still want the comprehensive management capabilities provided by Cisco UCS Manager. Cisco UCS Mini delivers servers, storage, and 10-Gigabit networking in an easy-to-deploy, compact form factor.

To find the virtual desktop capacity of a single Cisco UCS B200 M4 Server with UCS Mini, we used the Login Consultants Virtual Session Indexer (Login VSI) 4.1.4 benchmark. The Login VSI workload we used performs a range of tasks to simulate a typical knowledge worker. The benchmark results show the maximum number of virtual desktops that a server can support by measuring response times throughout the test.

We set out to examine such a virtual desktop solution that consisted of the following components:

- Cisco UCS Mini (Cisco UCS 5108 AC2 Chassis and Cisco UCS 6324 FI).
- Cisco UCS B200 M4 server with Intel(R) Xeon(R) E5 2699 V3 processor.
- VMware vSphere 5.5 U2.
- A VMware Horizon View 6.0.2 virtual desktop linked clone pool consisting of Microsoft Windows 7SP1 x64 VMs.
- All Virtual machines in the Desktop Pool are provisioned with 2 vCPU, 1.5GB of reserved memory and 32GB Storage for Windows 7 SP1 x64.
- All the VMs are created on the 3TB LUN provided from the NetApp Storage.

Acronyms

| Acronym | Description |
|----------------|----------------------------------|
| FI | Fabric Interconnect |
| LUN | Logical Unit Number |
| OS | Operating System |
| HDD | Hard Disk Drive |
| UCS | Unified Computing System |
| UCSM | Unified Computing System Manager |
| VDI | Virtual Desktop Infrastructure |
| VIC | Virtual Interface Card |
| VM | Virtual Machine |
| VSI | Virtual Session Index |

Environment Matrix

Infra Components

| Component | Version |
|---|--|
| UCS Server | UCS B200 M4 |
| UCSM | 3.1(1e) |
| Hypervisor | |
| ESXi | VMWare ESXi 5.5 U2 |
| Operating System | |
| Windows Server OS | Windows Server 2012 R2 x64 (Japanese/ English) |
| Virtual Desktop Delivery Component | |
| VMWare Horizon View | 6.0.2 |

| Component | Version |
|--|--|
| VDI Scalability Measuring Tool | |
| Login VSI | 4.1.4 |
| Active Directory, DHCP and DNS | Windows Server 2012 R2 x64 (Japanese/ English) |
| Login VSI Launcher, Analyzer and VSI share | Windows Server 2012 R2 x64 (Japanese/ English) |
| Switches | |
| Nexus 7010 | 7.2(1)D1(1) |
| MDS 9513 | 6.2(13b) |

SUT Components

| Component | Version/ Type |
|--------------------------------|--|
| UCS Server | Cisco UCS B200 M4 Server with UCS Mini |
| UCSM | 3.1(1e) |
| CPUs | |
| Vendor | Intel® Corporation |
| Name | Intel(R) Xeon(R) E5-2699 v3 |
| Core Frequency (GHz) | 2.3 |
| Platform | |
| Vendor | Cisco |
| BIOS Settings | 3.1(1e) |
| Memory Modules | |
| Total RAM in the system (GB) | 576 |
| Type | DDR4 |
| Speed (MHz) | 2133 |
| Number of RAM Modules | 18 |
| Size (GB) | 32 |
| Chip organization | Double sided |
| Rank | Quad |
| Hypervisor | |
| Name | VMWare ESXi 5.5 U2 |
| Build Number | 2068190 |
| Operating System Power Profile | Maximum Performance |

| Component | Version/ Type |
|--------------------------|---------------------------------------|
| Operating Systems | |
| Windows Desktop OS | Windows 7 SP1 x64 (Japanese/ English) |
| Adapters | |
| IO Adapter | Cisco UCS VIC 1380 - 4.1(1d) |

Tested Windows 7 SP1 x64 VM Configuration

| Components of VM | English | Japanese |
|-----------------------------------|--------------------------|--------------------------|
| Virtual Desktop - vCPU | 2 | 2 |
| Virtual Desktop - RAM | 1.5 GB | 1.5 GB |
| Virtual Desktop - Hard Disk | 32 GB (Thin Provisioned) | 32 GB (Thin Provisioned) |
| Virtual Desktop - Network Adapter | Intel e1000 | Intel e1000 |
| OS Build number | 677651 | 677662 |

Implementation Steps and Test Execution Steps

- [Implementation steps, page 7](#)
- [Test Execution Details, page 7](#)

Implementation steps

- Infra components such as Active Directory/DNS and DHCP server, vCenter server, View composer and View Connection server are deployed as Virtual machines on Cisco UCS B200 M4 server with UCS Mini.
- Master image created on Server Under Test (Cisco UCS B200 M4 server with UCS Mini) and installed with Windows 7 SP1 x64 resides on 3TB LUN provided from NetApp Storage.
- Login VSI Launcher is deployed as VM to incrementally login the users to the virtual desktop sessions(created from master image) and begin the workload(Light, Medium, Heavy) on each.

Test Execution Details

Login VSI helps to test and compare the performance of different software and hardware solutions in VDI environment. Login VSI used to measure the maximum capacity of current infrastructure in a quick and easy way. The simulated users work with the same applications as your average employee such as Word, Excel, Outlook and Internet Explorer and also can easily add our own custom applications to the tests.

Light Workload

The light workload runs fewer applications and starts/stops them less frequently. This results in lower CPU, Memory and IO usage.

Medium Workload

Medium workload is the default workload in Login VSI. The standard Login VSI medium workload designed to run on 2vCPU's per desktop VM. This workload emulates a medium knowledge worker using Office, IE, PDF and Java/ FreeMind.

- Once a session has been started the workload will repeat (loop) every 48 minutes. The loop is divided in 4 segments, each consecutive Login VSI user logon will start a different segments. This ensures that all elements in the workload are equally used throughout the test.

- During each loop, the response time is measured every 3-4 minutes. The medium workload opens up to 5 applications simultaneously. The keyboard type rate is 160 ms for each character. Approximately 2 minutes of ideal time is included in simulate real-world users.

Each loop will open and use:

- Outlook, browse messages.
- Internet Explorer, browsing different web pages and a YouTube style video(480p Movie Trailer) is opened 3 times in every loop.
- Word, one instance to measure response time, one instance to review and edit the document.
- Doro PDF Printer & Acrobat reader, the word document is printed and reviewed to PDF.
- Excel, a very large randomized sheet is opened.

Heavy Workload

The heavy workload is based on the medium workload except that the heavy workload:

- Begins by opening 4 instance of internet explorer. These instances stay open throughout the workload loop.
- Begins by opening 2 instances of Adobe Reader. These instances stay open throughout the workload loop.
- There are more PDF Printer actions in the workload.
- Instead of 480p videos, a 720p and a 1080p videos are watched.
- Increased the time the workload plays the flash game.
- The ideal time is reduced to 2minutes.
