[Einführung](#)

Dieses Dokument veranschaulicht, wie eine Verbindung zwischen einem Router und dem Cisco VPN Client 4.x mithilfe des RADIUS (Remote Authentication Dial-In User Service) für die Benutzeroauthentifizierung konfiguriert wird. Die Cisco IOS® Software-Versionen 12.2(8)T und höher unterstützen Verbindungen vom Cisco VPN Client 4.x. Die VPN-Clients 3.x und 4.x verwenden die DH-Richtlinie (Diffie Hellman) der Gruppe 2. Der Befehl **isakmp policy # group 2** ermöglicht den VPN-Clients, eine Verbindung herzustellen.

Dieses Dokument zeigt die Authentifizierung auf dem RADIUS-Server und die lokale Autorisierung (z. B. die Zuweisung des Windows Internet Naming Service (WINS) und des Domain Naming Service (DNS)) durch den Router. Wenn Sie sowohl die Authentifizierung als auch die Autorisierung über den RADIUS-Server durchführen möchten, lesen Sie den Abschnitt [Konfigurieren von IPSec zwischen einem Cisco IOS-Router und einem Cisco VPN Client 4.x für Windows mithilfe von RADIUS](#).

Hinweis: IPSec VPN Accounting ist jetzt verfügbar. Weitere Informationen und Beispielkonfigurationen finden Sie unter [IPSec VPN Accounting](#).

Weitere Informationen zum Szenario, in dem die Benutzeroauthentifizierung extern mit dem TACACS+-Protokoll erfolgt, finden Sie im [Konfigurationsbeispiel für den IPsec-Tunnel zwischen dem IOS-Router und dem Cisco VPN-Client 4.x für Windows mit TACACS+-Benutzeroauthentifizierung](#).

Weitere Informationen zum Szenario, in dem die Benutzeroauthentifizierung lokal im Cisco IOS-Router erfolgt, finden Sie unter [Konfigurieren von Cisco VPN Client 3.x für Windows zu IOS mit lokaler erweiterter Authentifizierung](#).

Weitere Informationen zum Einrichten der VPN-Verbindung für den Remote-Zugriff zwischen einem Cisco VPN-Client (4.x für Windows) und einem Cisco VPN-Client (4.x für Windows) und der PIX 500 Security Appliance 7.x unter Verwendung eines Microsoft Windows 2003 Internet Authentication Service (Internet Authentication Service) finden Sie unter [PIX/ASA 7.x und Cisco VPN Client 4.x für Windows 2.\) RADIUS-Server](#).

Unter [IPSec - PIX to VPN Client Wild Card, Pre-shared, Mode Configuration with Extended Authentication](#) finden Sie Informationen zum Verbinden eines VPN-Clients mit einer PIX-Firewall mithilfe von Platzhaltern, mode-config, dem Befehl **sysopt connection-ipsec** und Extended Authentication (Xauth).

Unter [IPsec Between a VPN 300 Concentrator and a VPN Client 4.x for Windows using RADIUS for User Authentication and Accounting Configuration Example](#) finden Sie Informationen zum Einrichten eines IPsec-Tunnels zwischen einem Cisco VPN 300 Concentrator und einem Cisco VPN Client 4.x für Windows mit RADIUS für Benutzeroauthentifizierung und -Accounting.

Voraussetzungen

Anforderungen

Stellen Sie sicher, dass Sie diese Anforderungen erfüllen, bevor Sie versuchen, diese Konfiguration durchzuführen:

- Ein Adresspool, der IPsec zugewiesen wird
- Eine Gruppe mit dem Namen "3000clients" und dem Kennwort "cisco123".
- Benutzeroauthentifizierung auf einem RADIUS-Server

Verwendete Komponenten

Die Informationen in diesem Dokument basieren auf den folgenden Software- und Hardwareversionen:

- Ein 2621XM-Router, auf dem die Cisco IOS-Softwareversion 12.2(15)T2 ausgeführt wird
- Cisco Secure ACS für Windows 2000, Version 4.2 (alle RADIUS-Server sollten funktionieren)
- Cisco VPN Client für Windows 4.8 (alle VPN Client 4.x und höher sollten funktionieren)

Die Informationen in diesem Dokument wurden von den Geräten in einer bestimmten Laborumgebung erstellt. Alle in diesem Dokument verwendeten Geräte haben mit einer leeren (Standard-)Konfiguration begonnen. Wenn Ihr Netzwerk in Betrieb ist, stellen Sie sicher, dass Sie

die potenziellen Auswirkungen eines Befehls verstehen.

Dies ist die Ausgabe des Befehls **show version** auf dem Router:

```
vpn2621#show version
Cisco Internetwork Operating System Software

RADIUS-Serverkonfiguration

Konfigurieren des RADIUS-Servers für die Benutzeroauthentifizierung

Gehen Sie wie folgt vor, um den RADIUS-Server zu konfigurieren:

- Fügen Sie in der RADIUS-Serverdatenbank einen Eintrag für den Router hinzu.

AAA Client Hostname	AAA Client IP Address	Authenticate Using
340	172.18.124.151	RADIUS (Cisco Aironet)
Aironet-340-Lab	14.36.1.99	RADIUS (Cisco Aironet)
glenntest	172.18.124.120	RADIUS (Cisco IOS/PIX)
router	172.18.124.150	TACACS+ (Cisco IOS)

Add Entry

- [Network Device Groups](#)
- [Adding a Network Device Group](#)
- [Renaming a Network Device Group](#)
- [Deleting a Network Device Group](#)
- [AAA Clients](#)
- [Adding a AAA Client](#)
- [Editing a AAA Client](#)
- [Deleting a AAA Client](#)
- [AAA Servers](#)
- [Adding a AAA Server](#)
- [Editing a AAA Server](#)
- [Deleting a AAA Server](#)
- [Proxy Distribution Table](#)
- [Adding a Proxy Distribution Table Entry](#)
- [Sorting Proxy Distribution Table Entries](#)

- Geben Sie die IP-Adresse des Routers "172.18.124.159" zusammen mit dem gemeinsamen geheimen Schlüssel "cisco123" an. Wählen Sie RADIUS im Dropdown-Feld Authenticate Using (Authentifizieren mit) aus.

- [AAA Client Hostname](#)
- [AAA Client IP Address](#)
- [Key](#)
- [Network Device Group](#)
- [Authenticate Using](#)
- [Single Connect TACACS+ AAA Client](#)
- [Log Update/Watchdog Packets from this AAA Client](#)
- [Log RADIUS Tunneling Packets from this AAA Client](#)

AAA Client Hostname
The AAA Client Hostname is the name assigned to the AAA client.
[\[Back to Top\]](#)

AAA Client IP Address

- Fügen Sie den Benutzernamen für den VPN-Benutzer in der CiscoSecure-Datenbank hinzu. Im Beispiel lautet der Benutzername cisco.

- [User Setup and External User Databases](#)
- [Finding a Specific User in the CiscoSecure User Database](#)
- [Adding a User to the CiscoSecure User Database](#)
- [Listing Usernames that Begin with a Particular Character](#)
- [Listing All Usernames in the CiscoSecure User Database](#)
- [Changing a Username in the CiscoSecure User Database](#)

User Setup enables you to configure individual user information, add users, and delete users in the database.

- Geben Sie im nächsten Fenster das Kennwort für den Benutzer cisco an. In diesem Beispiel ist das Kennwort auch cisco. Sie können das Benutzerkonto einer Gruppe zuordnen. Wenn Sie fertig sind, klicken Sie auf Senden.

- [Account Disabled](#)
- [Deleting a Username](#)
- [Supplementary User Info](#)
- [Password Authentication](#)
- [Group to which the user is assigned](#)
- [Callback](#)
- [Client IP Address Assignment](#)
- [Advanced Settings](#)
- [Network Access Restrictions](#)
- [Max Sessions](#)
- [Usage Quotas](#)
- [Account Disable](#)
- [Downloadable ACLs](#)
- [Advanced TACACS+ Settings](#)
- [TACACS+ Enable Control](#)
- [TACACS+ Enable Password](#)
- [TACACS+ Outbound Password](#)
- [TACACS+ Shell Command Authorization](#)
- [TACACS+ Unknown Services](#)
- [IETF RADIUS Attributes](#)
- [RADIUS Vendor-Specific Attributes](#)

Account Disabled Status

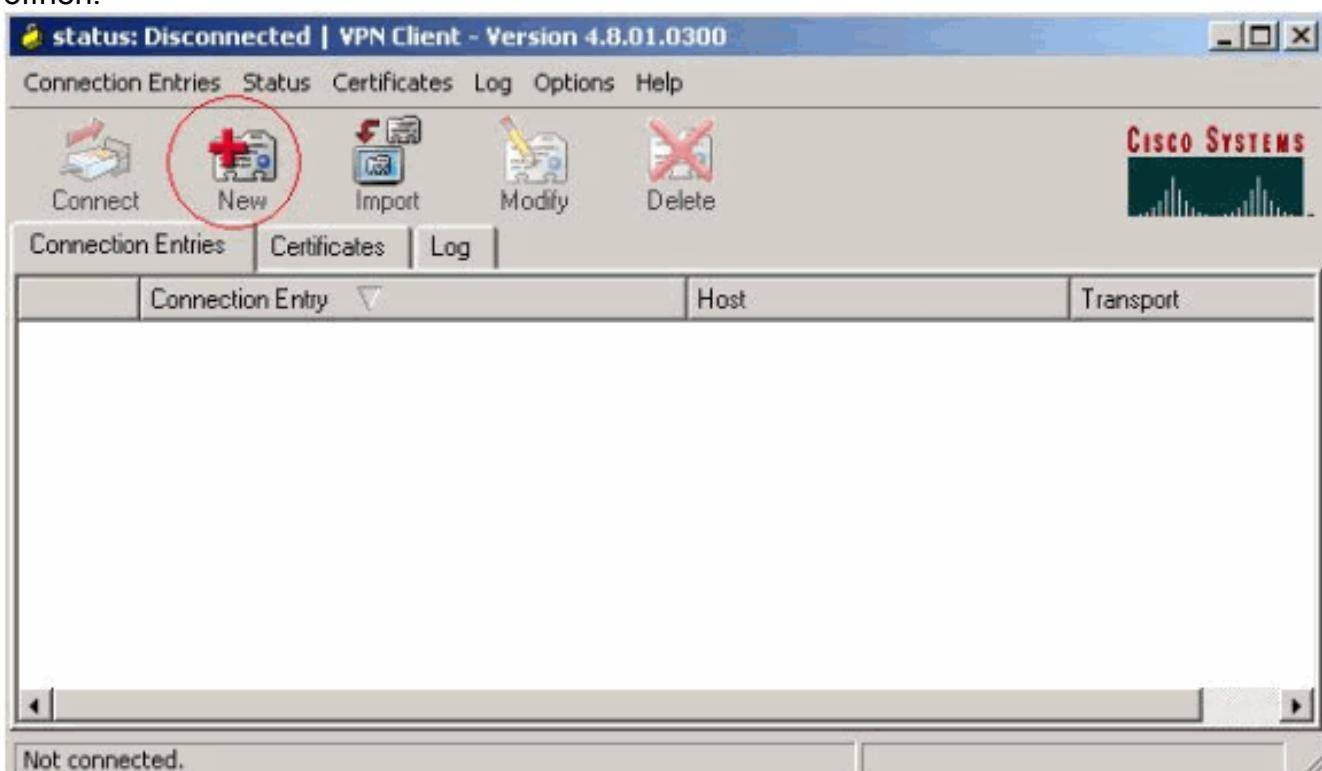

Select the Account Disabled check box to disable this account; clear the check box to enable the account.

[\[Back to Top\]](#)

Konfiguration des VPN-Clients 4.8

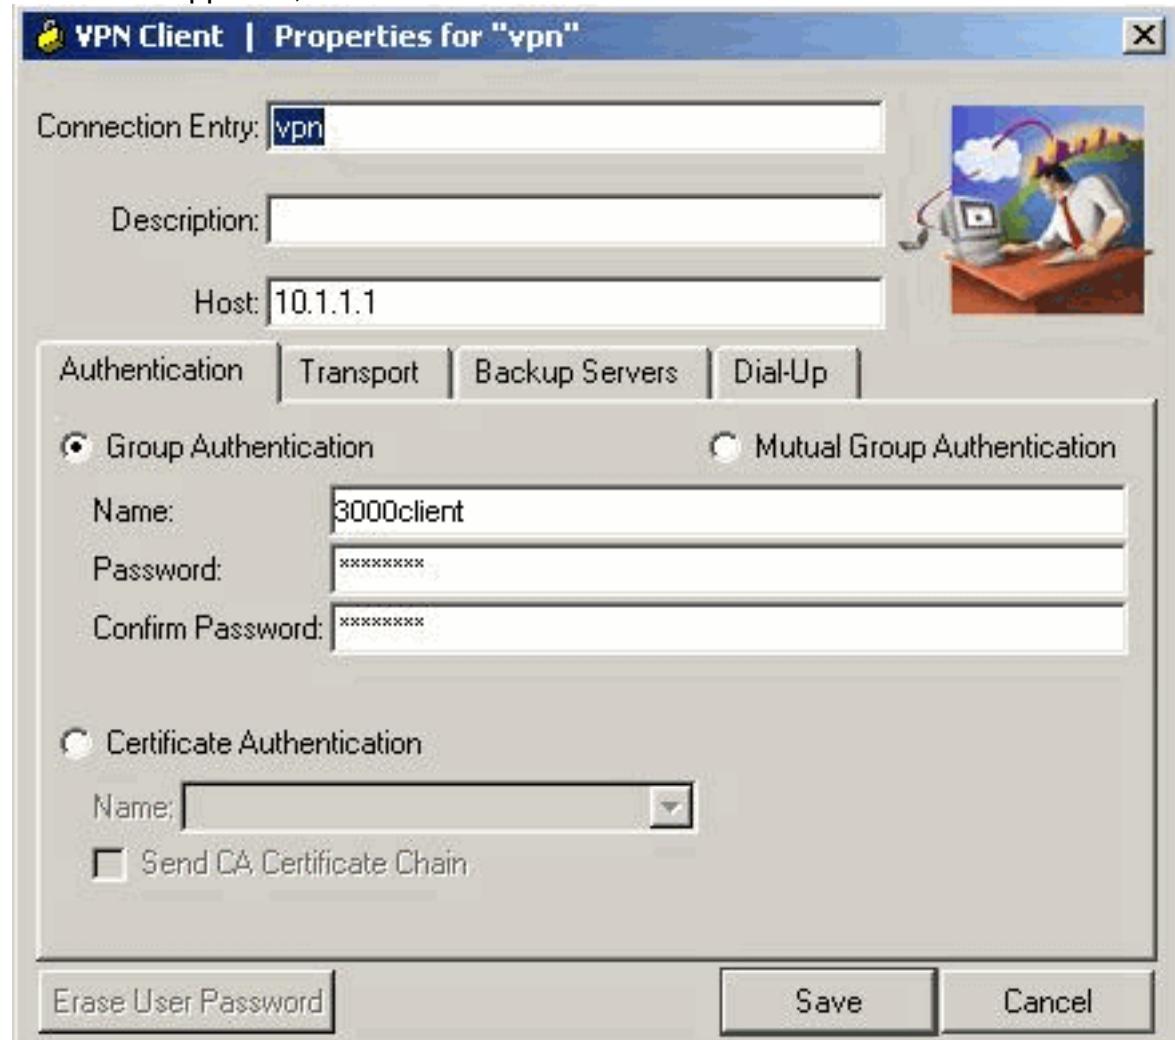

Gehen Sie wie folgt vor, um den VPN Client 4.8 zu konfigurieren:

1. Wählen Sie Start > Programme > Cisco Systems VPN Client > VPN Client aus.
2. Klicken Sie auf Neu, um das Fenster Create New VPN Connection Entry (Neue VPN-Verbindung erstellen) zu öffnen.

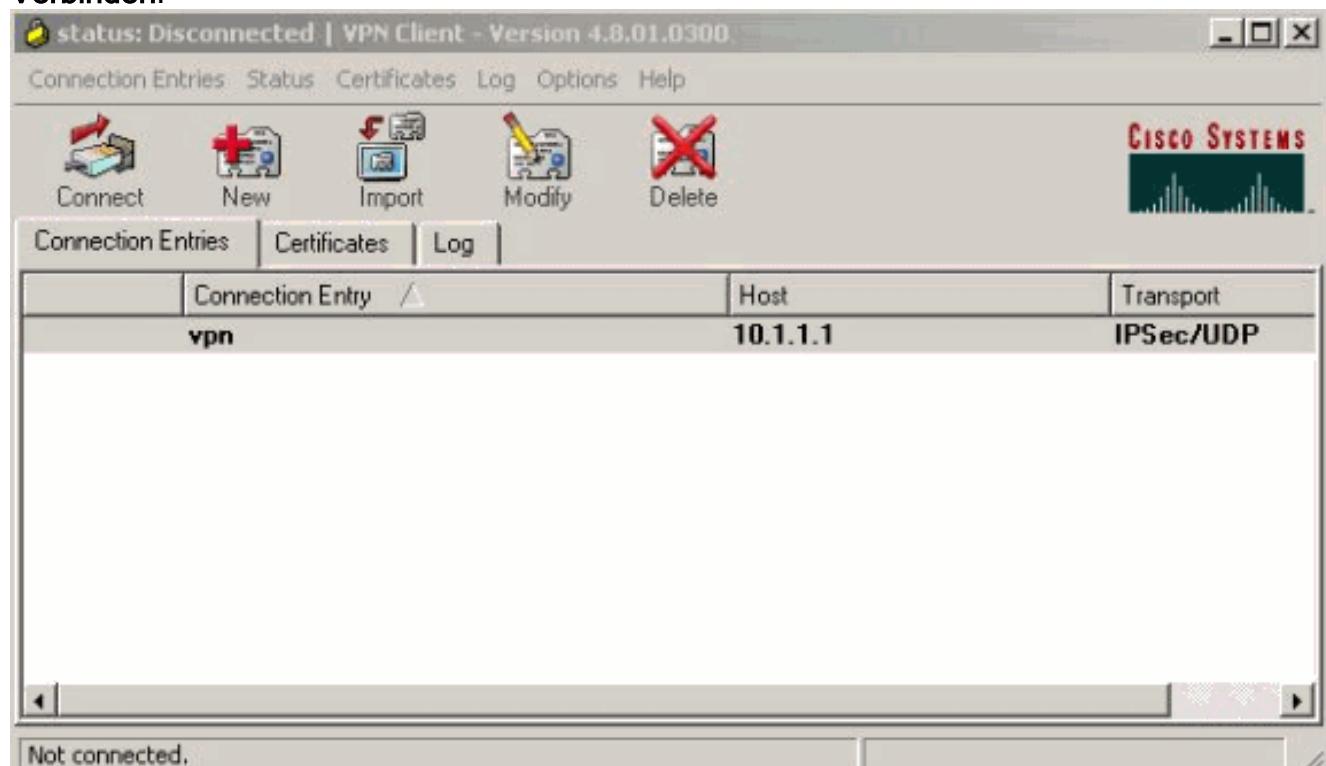

3. Geben Sie den Namen des Verbindungseintrags und eine Beschreibung ein. Geben Sie die

externe IP-Adresse des Routers in das Feld Host ein. Geben Sie dann den Namen und das Kennwort der VPN-Gruppe ein, und klicken Sie auf

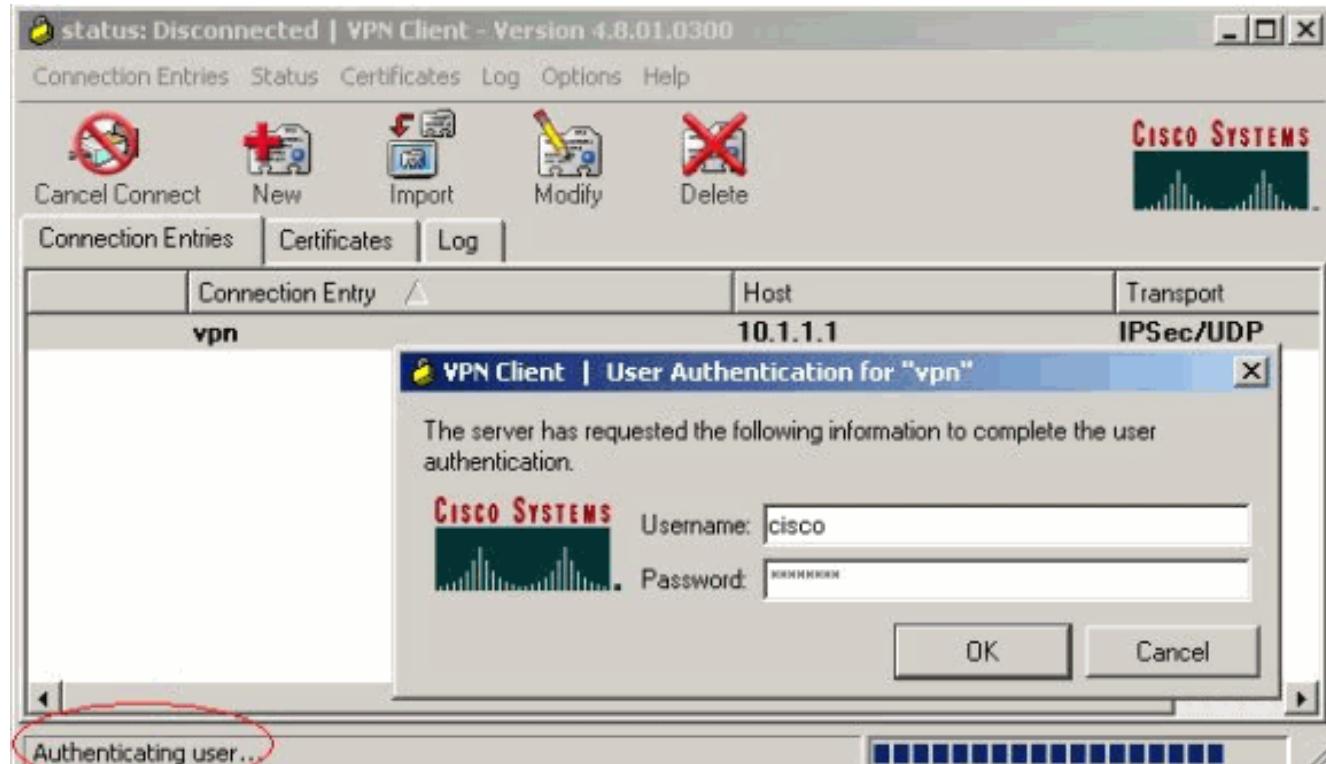

Speichern.

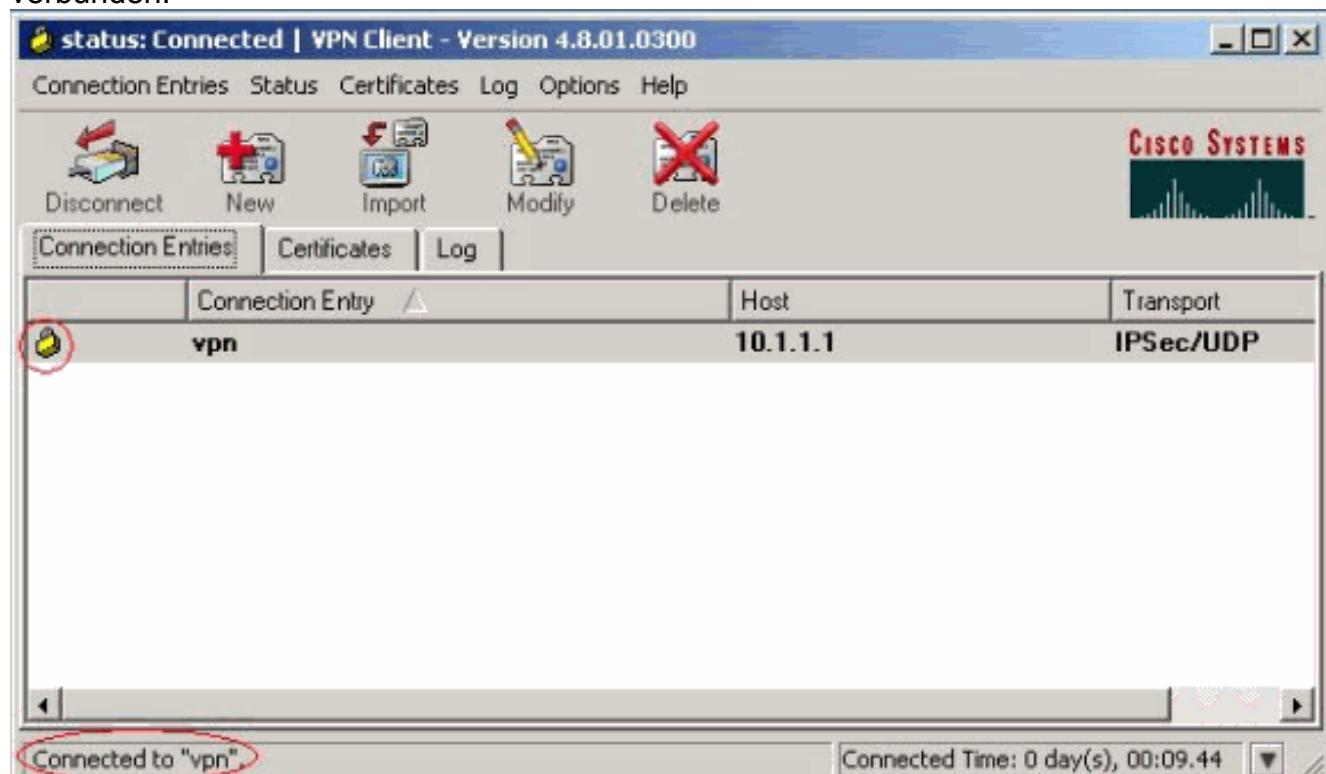

4. Klicken Sie auf die Verbindung, die Sie verwenden möchten, und klicken Sie im Hauptfenster des VPN-Clients auf **Verbinden**.

5. Geben Sie bei Aufforderung die Benutzernamen- und Kennwortinformationen für xauth ein, und klicken Sie auf OK, um eine Verbindung zum Remote-Netzwerk herzustellen.

Der VPN-Client wird mit dem Router in der Zentrale verbunden.

Aktivieren von Split Tunneling

Um Split-Tunneling für die VPN-Verbindungen zu aktivieren, müssen Sie eine Zugriffskontrollliste (ACL) für den Router konfigurieren. In diesem Beispiel ist der Befehl **access-list 108** für Split-Tunneling der Gruppe zugeordnet, und der Tunnel wird zum Netzwerk 14.38.X.X /16 geformt. Der Datenverkehr fließt unverschlüsselt zu Geräten, die sich nicht in der ACL 108 befinden (z. B. das

Internet).

```
access-list 108 permit ip 172.18.124.0 0.0.255.255 10.16.20.0 0.0.0.255
```

Wenden Sie die ACL auf die Gruppeneigenschaften an.

```
crypto isakmp client configuration group 3000client
key cisco123
dns 10.1.1.10
wins 10.1.1.20
domain cisco.com
pool ippool
acl 108
```

Konfigurieren der RADIUS Server-Fallback-Funktion

Wenn der primäre RADIUS-Server nicht mehr verfügbar ist, führt der Router ein Failover zum nächsten aktiven Backup-RADIUS-Server durch. Der Router verwendet weiterhin den sekundären RADIUS-Server für immer, selbst wenn der primäre Server verfügbar ist. In der Regel ist der primäre Server eine hohe Leistung und der bevorzugte Server. Wenn der sekundäre Server nicht verfügbar ist, kann die lokale Datenbank mit dem lokalen [Befehl aaa authentication login userauthen group radius local](#) für die Authentifizierung verwendet werden.

Überprüfen

In diesem Abschnitt überprüfen Sie, ob Ihre Konfiguration ordnungsgemäß funktioniert.

Das [Output Interpreter Tool](#) (nur [registrierte](#) Kunden) (OIT) unterstützt bestimmte **show**-Befehle. Verwenden Sie das OIT, um eine Analyse der **Ausgabe des** Befehls **show** anzuzeigen.

Diese Ausgabe wird aus relevanten **show**-Befehlen ausgegeben:

Fehlerbehebung

In diesem Abschnitt finden Sie eine Fehlerbehebung für Ihre Konfiguration.

Befehle zur Fehlerbehebung

Das [Output Interpreter Tool](#) (nur [registrierte](#) Kunden) (OIT) unterstützt bestimmte **show**-Befehle. Verwenden Sie das OIT, um eine Analyse der **Ausgabe des** Befehls **show** anzuzeigen.

Hinweis: Beachten Sie [vor der](#) Verwendung von Debug-Befehlen die [Informationen](#) zu [Debug-Befehlen](#).

- **debug crypto ipsec:** Zeigt Debuginformationen über IPSec-Verbindungen an.
- **debug crypto isakmp:** Zeigt Debuginformationen über IPSec-Verbindungen an und zeigt die erste Gruppe von Attributen an, die aufgrund von Inkompatibilitäten an beiden Enden abgelehnt werden.
- **debug crypto engine:** Zeigt Informationen vom Crypto Engine an.
- **debug aaa authentication:** Zeigt Informationen zur AAA/Terminal Access Controller Access Control System Plus (TACACS+)-Authentifizierung an.
- **debug aaa authorized raduis:** Zeigt Informationen über AAA/TACACS+-Autorsisierung an.
- **debug radius:** Zeigt Informationen zur Problembehebung für die Kommunikation zwischen

dem RADIUS-Server und dem Router an.

Debugausgabe

Dieser Abschnitt enthält Debugging-Informationen vom Router, mit denen Sie eine Fehlerbehebung für Ihre Konfiguration durchführen können.
