Einführung

Dieses Dokument beschreibt die Installation, das Upgrade und die Registrierung von Firepower Threat Defense (FTD) auf ASA55xx-X-Appliances.

Voraussetzungen

Anforderungen

Für dieses Dokument bestehen keine speziellen Anforderungen.

Verwendete Komponenten

Die Informationen in diesem Dokument basieren auf den folgenden Software- und Hardwareversionen:

- ASA 5508-X
- ASA 5512-X
- FireSIGHT Management Center (FMC) mit 6.0.1 (Build 1213)

Die Informationen in diesem Dokument wurden von den Geräten in einer bestimmten Laborumgebung erstellt. Alle in diesem Dokument verwendeten Geräte haben mit einer leeren (Standard-)Konfiguration begonnen. Wenn Ihr Netzwerk in Betrieb ist, stellen Sie sicher, dass Sie die potenziellen Auswirkungen eines Befehls verstehen.

Hintergrundinformationen

FTD ist ein einheitliches Software-Image, das auf folgenden Plattformen installiert werden kann:

- ASA5506-X, ASA5506W-X, ASA5506H-X, ASA5508-X, ASA5516-X
- ASA5512-X, ASA5515-X, ASA5525-X, ASA5545-X, ASA555-X
- FPR4100, FPR9300
- VMware (ESXi)
- Amazon Web Services (AWS)
- KVM
- ISR Router-Modul

Dieses Dokument soll zeigen,

- Installation von FTD Version 6.0.0 auf den Plattformen ASA5508-X und ASA5512-X
- Das Upgrade-Verfahren für FTD von Version 6.0.0 auf 6.0.1
- Registrierung von FirePOWER Management Center (FMC) und grundlegende Lizenzierung

Konfigurieren

Netzwerkdiagramm

FTD-Software-Download

Navigieren Sie zu Next-Generation Firewalls (NGFW) > ASA mit FirePOWER Services > ASA 5508-X mit FirePOWER Services, und wählen Sie Firepower Threat Defense Software:

Ebenso für die ASA5512-X-Software.

Aufgabe 1: Überprüfen der Voraussetzungen

Überprüfen Sie die Voraussetzungen vor der FTD-Installation.

Lösung:

Für die FTD-Installation verwenden Sie zwei Images:

- Betriebssystem-Image (auch als Boot-Image bekannt) Für Firepower Threat Defense auf ASA5506-X, ASA5506H-X, ASA5506W-X, ASA5508-X, ASA5516-X ist eine *.Ifbff-Datei. Bei Firepower Threat Defense auf Saleen (ASA5512-X, ASA5515-X, ASA5525-X, ASA5545-X, ASA5555-X) handelt es sich um eine *.cdisk-Datei.
- 2. Systemabbild Dies ist eine .pkg-Datei.

Bevor Sie mit der FTD-Installation fortfahren, überprüfen Sie Folgendes:

- Der ASA-Flash-Speicher muss mindestens 3,1 GB freien Speicherplatz (3 GB + Größe des Boot-Image) aufweisen.
- Das Boot-Image wird auf einen TFTP-Server hochgeladen.
- Das System-Image wird auf einen HTTP- oder FTP-Server hochgeladen.
- Auf ASA5506/08/16 ist der ROMMON mindestens 1.1.8-Version

Überprüfen Sie den freien Speicherplatz:

FTD5508X# **show flash** | **i free** 7859437568 bytes total (4273819648 bytes free) Überprüfen Sie diese Bilder:

Dateiname	Beschreibung
ftd-boot-9.6.1.0.lfbff	5506/5508/5516. Dies ist das Boot-Image für die saubere Installation unter 5506/5508/5516.
ftd-boot-9.6.1.0.cdisk	v6.0.1 Firepower Threat Defense-Boot-Image für ASA 5512/5515/5525/5545/5555. Dies ist das Boot-Image für die saubere Installation unter 5512/5515/5525/5545/5555
ftd-6,0,0-1005,pkg	v6.0.0 Firepower Threat Defense für alle unterstützten ASAs: 5506/5508/5512/5515/5516/5525/5545/5555.

Aufgabe 2: Aktualisieren Sie ASA5508-X ROMMON.

Wie in den erforderlichen Komponenten erwähnt, müssen ASA5506-X-, ASA5508-X- und ASA5516-X-Geräte sich auf ROMMON v1.1.8 befinden. Falls nicht, installieren Sie asa5500-firmware-1108.SPA (auf der Cisco ASA-Downloadseite verfügbar).

Aufgabenanforderung:

Aktualisieren Sie ASA5508 ROMMON von 1.1.1 auf 1.1.8.

Lösung:

Das Verfahren wird im ASA ROMMON Upgrade Guide beschrieben.

Schritt 1: Überprüfen Sie die vorhandene ROMMON-Version:

FTD55	08X# show module			
Mod	Card Type		Model	Serial No.
1	ASA 5508-X with FirePOWER services	s, 8GE, AC,	ASA5508	JAD192100SZ
sfr	FirePOWER Services Software Module	e	ASA5508	JAD192100SZ
Mod	MAC Address Range	Hw Version	Fw Version	Sw Version
1	188b.9dle.ca7c to 188b.9dle.ca84	1.0	1.1.1	9.5(2)
sfr	188b.9dle.ca7b to 188b.9dle.ca7b	N/A	N/A	5.4.1-211

Schritt 2.Laden Sie die ROMMON-Firmware in den Flash-Speicher der ASA herunter:

```
FTD5508X# copy ftp://10.48.40.70/ANG/mzafeiro/asa5500-firmware-1108.SPA disk0:asa5500-firmware-
1108.SPA
Address or name of remote host [10.48.40.70]?
Source filename [ANG/mzafeiro/asa5500-firmware-1108.SPA]?

• • •

Überprüfen:

Sie können den Befehl **show module** verwenden, um die ROMMON-Softwareversion zu überprüfen:

FTD55 Passw	08X>	enable			
FTD55	508X#	show module			
Mod	Card	Туре		Model	Serial No.
1 sfr	ASA 5 Fire	5508-X with FirePOWER services POWER Services Software Module	s, 8GE, AC,	ASA5508 ASA5508	JAD192100SZ JAD192100SZ
Mod	MAC A	Address Range	Hw Version	Fw Version	Sw Version
1 sfr	188b. 188b.	.9dle.ca7c to 188b.9dle.ca84 .9dle.ca7b to 188b.9dle.ca7b	1.0 N/A	1.1.8 N/A	9.5(2) 5.4.1-211

Aufgabe 3: Installieren Sie das FTD-Boot-Image auf ASA55xx-X.

Aufgabenanforderung:

Installieren Sie das FTD-Boot-Image ftd-boot-9.6.1.0.lfbff auf ASA5508-X.

Lösung:

Dafür gibt es mehrere Methoden. Dies ist die erste:

Methode 1. Von RUMON

Schritt 1: Laden Sie die ASA neu, und wechseln Sie in den ROMMON-Modus:

```
FTD5508X# reload
Proceed with reload? [confirm]
FTD5508X#
***
*** --- START GRACEFUL SHUTDOWN ---
Shutting down isakmp
Shutting down webvpn
Shutting down webvpn
Shutting down sw-module
Shutting down License Controller

Cisco FTD Boot 6.0.0 (9.6.1.)

Type ? for list of commands

firepower-boot>

Bei ASA5512/15/25/45/55 ist die Vorgehensweise identisch, wobei der Boot-Image-Name nur vom Namen abweicht:

rommon #0> ADDRESS=10.62.148.10
rommon #1> SERVER=10.229.22.42
rommon #2> GATEWAY=10.62.148.1
rommon #3> IMAGE=ftd-boot-9.6.1.0.cdisk

Methode 2. Aus ASA-Modus

Schritt 1: Kopieren Sie das FTD-Boot-Image im ASA Exec-Modus (ohne ROMMON) in den ASA-Flash-Speicher:

ciscoasa# copy ftp://10.48.40.70/ANG/mzafeiro/ftd-boot-9.6.1.0.1fbff flash Schritt 2: Löschen Sie alle ASA-Images von der Festplatte:

ciscoasa# delete flash:asa* Der Flash-Inhalt nach dem Löschen von ASA-Images:

ciscoa	sa# show fla	sh				
#	length		da	ate/t	ime	path
131	33	May	20	2016	09:27:28	.boot_string

System initialization in progress. Please stand by. You must change the password for 'admin' to continue. Enter new password: Confirm new password: You must configure the network to continue. You must configure at least one of IPv4 or IPv6. **Do you want to configure IPv4? (y/n) [y]: Do you want to configure IPv6? (y/n) [n]:** Configure IPv4 via DHCP or manually? (dhcp/manual) [manual]: Enter an IPv4 address for the management interface [192.168.45.45]: 10.62.148.29 Enter an IPv4 netmask for the management interface [255.255.255.0]: 255.255.128 Enter the IPv4 default gateway for the management interface []: 10.62.148.1 Enter a fully qualified hostname for this system [firepower]: FTD5508 Enter a comma-separated list of DNS servers or 'none' []: 173.38.200.100,144.254.71.184 Enter a comma-separated list of search domains or 'none' []: If your networking information has changed, you will need to reconnect. For HTTP Proxy configuration, run 'configure network http-proxy'

Configure firewall mode? (routed/transparent) [routed]:

Configuring firewall mode ...

Update policy deployment information - add device configuration

You can register the sensor to a Firepower Management Center and use the Firepower Management Center to manage it. Note that registering the sensor to a Firepower Management Center disables on-sensor Firepower Services management capabilities.

When registering the sensor to a Firepower Management Center, a unique alphanumeric registration key is always required. In most cases, to register a sensor to a Firepower Management Center, you must provide the hostname or the IP address along with the registration key. 'configure manager add [hostname | ip address] [registration key]'

However, if the sensor and the Firepower Management Center are separated by a NAT device, you must enter a unique NAT ID, along with the unique registration key.

'configure manager add DONTRESOLVE [registration key] [NAT ID]'

Later, using the web interface on the Firepower Management Center, you must use the same registration key and, if necessary, the same NAT ID when you add this sensor to the Firepower Management Center.

Tipp: Sie können die Option **noconfirm** verwenden, um das Bild zu installieren. In diesem Fall werden Sie während der Installation nicht dazu aufgefordert.

firepower-boot>system install noconfirm ftp://10.229.22.42/ftd-6.0.0-1005.pkg

Bei FTD 6.1.x und höher werden Sie aufgefordert, den Verwaltungsmodus (lokal oder remote) einzustellen.

For HTTP Proxy configuration, run 'configure network http-proxy'

Manage the device locally? (yes/no) [yes]: no

Configure firewall mode? (routed/transparent) [routed]:

Lokaler Modus = Gilt nur für ASA55xx-X-Geräte. Sie verwalten das FTD über den FirePOWER Device Manager (FDM).

Remote-Modus = Sie verwalten FTD über FMC.

Überprüfung

<pre>> show version</pre>	
[FT]	D5508]
Model	: Cisco ASA5508-X Threat Defense (75) Version 6.0.0 (Build 1005)

VDB version	: 252

>

Die Installation des Systemabbilds auf ASA5512/15/25/45/55 ist mit der oben beschriebenen identisch.

Aufgabe 5: Registrierung des FTD beim FMC

FTD auf FMC-Server registrieren Verwenden Sie die folgenden Einstellungen:

Host	10.62.148.29
Anzeigename	FTD5508
Registrierungsschlüssel	Cisco
Gruppe Keine	
Zugriffskontrollrichtlinie	FTD5508
Grundlegende Richtlinie für Zugriffskontrolle	Keine
Standardaktion für Zugriffskontrollrichtlinie	Blockieren des gesamten Datenverkehrs

Lösung

Schritt 1:Geben Sie in FTD den FMC-Server an:

```
> configure manager add 10.62.148.73 cisco
Manager successfully configured.
Please make note of reg_key as this will be required while adding Device in FMC.
> show managers
                     : 10.62.148.73
Host
Registration Key
                       : ****
Registration
                       : pending
RPC Status
                       :
                      : Manager
Type
                      : 10.62.148.73
Host
Registration
                      : Pending
```

>

Schritt 2:Bevor Sie die FTD hinzufügen, müssen Sie das FMC beim Smart Licensing Server registrieren. Wenn Sie versuchen, ein FTD-Gerät ohne Smart License hinzuzufügen, erhalten Sie die folgende Fehlermeldung:

Sie können den Evaluierungsmodus auswählen. So können Sie FTD 90 Tage lang ohne Funktionen verwenden, die eine starke Verschlüsselung erfordern (z. B. VPN).

Overview	Analysis	Policies	Devices	Objects	AMP					Deploy	୍ ତ୍ 🦻	ystem Help 🔻	admin 🔻
			c	onfiguration	Users	Domains	Integration	Updates	Licenses + Sma	rt Licenses	Health *	Monitoring •	Tools •

On version 5.4 devices specified from licensing	ces or earlier, the li page.	icensing options will need to	be					
	3	Register Can	cel					

Am Ende des FTD-Dokuments wird eine Richtlinie bereitgestellt:

Um zu überprüfen, was im Hintergrund passiert, während das FTD-Gerät hinzugefügt wird, aktivieren Sie **Pigtail** auf FMC und FTD.

Auf FMC:

FTD:

> pigtail

Hinweis: Wenn der Status der FTD-Verwaltungsschnittstelle ausgefallen ist, stellen Sie sicher, dass der Wert für die Konvertierung 0x1 lautet.

Aufgabe 6: FTD-Upgrade

Aktualisieren Sie FTD bei dieser Aufgabe von 6.0.0 auf 6.0.1.

	Version	Dateiname
Anfängliches FTD-Image	Version 6.0.0 (Build 1005)	ftd-6,0,0-1005,pkg
FTD-Zielbild	Version 6.0.1 (Build 1213)	Cisco_FTD_Upgrade-6.0.1-1213.sh

Lösung

Schritt 1: FTD-Image in FMC hochladen:

Product Updates	Rule Updates	Geolocation Updates	
		0.	mently running software version: 6.0.1
		Updates	5
		Upload sof	tware updates and patches here.
		Package	Browse No file selected. Upload Cancel

Schritt 2: Installieren Sie das FTD-Image:

Überprüfung

>

Aufgabe 7. Verbinden und Trennen des CLI-Modus der LINA-Engine

Wechseln Sie in den LINA-CLI-Modus, und trennen Sie dann die Verbindung.

Lösung

Geben Sie im FTD CLISH-Modus den folgenden Befehl ein:

> system support diagnostic-cli
Attaching to ASA console ... Press 'Ctrl+a then d' to detach.
Type help or '?' for a list of available commands.

firepower>
firepower> enable
Password: <-- by default empty (null)
firepower#</pre>

Wie in der obigen Meldung erwähnt, um die Verbindung von der FTD LINA-Konsole zu trennen (trennen), drücken Sie STRG + a und dann d:

```
firepower# <- 'Ctrl+a then d' Console connection detached.
admin@FTD5508:~$
```

Aufgabe 8: Neu erstellen einer vorhandenen FTD-Installation

Anforderung

Aktualisieren Sie das vorhandene FTD-Image, und installieren Sie die Version 6.1.0-330.

Lösung

Bei dieser Aufgabe wird davon ausgegangen, dass eine FTD-Appliance mit Code 6.0.1.x vorhanden ist und dass aus welchen Gründen ein neues Image erforderlich ist (z. B. nicht behebbare Datenbankbeschädigung, katastrophaler Fehler, der kein Software-Upgrade erlaubt

usw.).

Zusammenfassung der Schritte

- 1. Kompatibilitätsprüfung.
- 2. FTD von FMC abmelden
- 3. Laden Sie die FTD-Appliance neu, und geben Sie die BootCLI ein.
- 4. Führen Sie den Setup-Assistenten aus.
- 5. Installieren Sie das FTD-System-Image.
- 6. Registrierung von FTD bei FMC

Detaillierte Schritte

Schritt 1: Überprüfen Sie die FirePOWER-Versionshinweise, und stellen Sie sicher, dass das FTD-Image, das Sie verwenden möchten, mit dem FMC kompatibel ist. Wenn das FMC nicht zuerst aktualisiert wird.

Schritt 2: Die Registrierung (Löschung) von FTD vom FMC aufheben. Dieser Schritt ist erforderlich, da die UUID-Änderungen nach dem FTD-Reimage nicht erneut registriert werden können, sondern von Grund auf neu hinzugefügt werden muss.

Schritt 3: Laden Sie die FTD-Appliance neu, und geben Sie die BootCLI ein. Da bereits ein FTD-Image installiert ist, kann die FTD-Boot-Image-Installation übersprungen werden:

> reboot

                       FTD5506
Hostname:
Management Interface Configuration
IPv4 Configuration:
                       static
       IP Address:
                       10.48.66.83
       Netmask:
                       255.255.255.128
```

Gateway:	10.48.66.1
IPv6 Configuration:	Stateless autoconfiguration
DNS Configuration: DNS Server:	192.168.0.1

NTP configuration: Disabled

CAUTION:

You have selected IPv6 stateless autoconfiguration, which assigns a global address based on network prefix and a device identifier. Although this address is unlikely to change, if it does change, the system will stop functioning correctly. We suggest you use static addressing instead.

```
Apply the changes?(y,n) [Y]: Y

You must configure the network to continue. You must configure at least one of IPv4 or IPv6. Do you want to configure IPv4? (y/n) [y]:

Do you want to configure IPv6? (y/n) [n]: Configure IPv4 via DHCP or manually? (dhcp/manual) [manual]: Enter an IPv4 address for the management interface [192.168.45.45]: 10.48.66.83 Enter an IPv4 netmask for the management interface [255.255.255.0]: 255.255.128 Enter the IPv4 default gateway for the management interface [192.168.45.1]: 10.48.66.1 Enter a fully qualified hostname for this system [firepower]: FTD5506 Enter a comma-separated list of DNS servers or 'none' []: 192.168.0.1 Enter a comma-separated list of search domains or 'none' []: If your networking information has changed, you will need to reconnect. For HTTP Proxy configuration, run 'configure network http-proxy'

Manage the device locally? (yes/no) [yes]: **no** Configure firewall mode? (routed/transparent) [routed]: Configuring firewall mode ...

Update policy deployment information

- add device configuration
- add network discovery
- add system policy

You can register the sensor to a Firepower Management Center and use the Firepower Management Center to manage it. Note that registering the sensor to a Firepower Management Center disables on-sensor Firepower Services management capabilities.

When registering the sensor to a Firepower Management Center, a unique alphanumeric registration key is always required. In most cases, to register a sensor to a Firepower Management Center, you must provide the hostname or the IP address along with the registration key. 'configure manager add [hostname | ip address] [registration key]'

However, if the sensor and the Firepower Management Center are separated by a NAT device, you must enter a unique NAT ID, along with the unique registration key.

'configure manager add DONTRESOLVE [registration key] [NAT ID]'

Later, using the web interface on the Firepower Management Center, you must use the same registration key and, if necessary, the same NAT ID when you add this sensor to the Firepower Management Center.

Schritt 6: FTD im FMC registrieren

> configure manager add 10.62.148.50 cisco

Manager successfully configured. Please make note of reg_key as this will be required while adding Device in FMC.

> show managers

Host	:	10.62.148.50
Registration Key	:	* * * *
Registration	:	pending
RPC Status	:	

Navigieren Sie auf dem FMC zu Geräte > Gerätemanagement, um das FTD-Gerät hinzuzufügen.

Nachdem Sie FTD zu FMC hinzugefügt haben, müssen Sie:

- Konfigurieren Sie die Geräteeinstellungen wie Schnittstellen und Routing neu.
- Neukonfiguration von Richtlinien wie VPN und QoS
- Anwenden zuvor angewendeter Richtlinien und Einstellungen wie Zugriffskontrollrichtlinie, NAT und Plattformeinstellungen
