Einführung

In diesem Dokument wird beschrieben, wie Threat-Centric NAC mit Advanced Malware Protection (AMP) auf Identity Services Engine (ISE) 2.1 konfiguriert wird. Die Schweregrade von Bedrohungen und Ergebnisse der Schwachstellenbewertung können verwendet werden, um die Zugriffsstufe eines Endpunkts oder Benutzers dynamisch zu steuern. Statusservices werden ebenfalls in diesem Dokument behandelt.

Hinweis: Das Dokument beschreibt die ISE 2.1-Integration mit AMP. Die Statusservices werden bei der Bereitstellung von AMP von der ISE als erforderlich angezeigt.

Voraussetzungen

Anforderungen

Cisco empfiehlt, über grundlegende Kenntnisse in folgenden Bereichen zu verfügen:

- Cisco Identity Service Engine
- Advanced Malware Protection

Verwendete Komponenten

Die Informationen in diesem Dokument basieren auf den folgenden Software- und Hardwareversionen:

- Cisco Identity Service Engine Version 2.1
- Wireless LAN Controller (WLC) 8.0.121.0
- AnyConnect VPN Client 4.2.02075
- Windows 7 Service Pack 1

Konfigurieren

Netzwerkdiagramm

Detaillierter Datenfluss

1. Der Client stellt eine Verbindung zum Netzwerk her, das **AMP_Profile** wird zugewiesen und der Benutzer wird zum AnyConnect-Bereitstellungsportal umgeleitet. Wenn AnyConnect auf dem Computer nicht erkannt wird, werden alle konfigurierten Module (VPN, AMP, Status) installiert. Konfiguration wird für jedes Modul zusammen mit diesem Profil übernommen.

2. Sobald AnyConnect installiert ist, wird eine Statusüberprüfung ausgeführt.

3. Das AMP Enabler-Modul installiert den FireAMP-Anschluss

4. Wenn ein Client versucht, schädliche Software herunterzuladen, löst der AMP-Connector eine Warnmeldung aus und meldet sie an die AMP-Cloud

5. AMP Cloud sendet diese Informationen an die ISE

Konfigurieren der AMP-Cloud

Schritt 1: Connector von AMP Cloud herunterladen

Um den Connector herunterzuladen, navigieren Sie zu Management > Download Connector (Management > Anschluss herunterladen). Wählen Sie anschließend Typ und **Download** FireAMP (Windows, Android, Mac, Linux) aus. In diesem Fall wurde **Audit** ausgewählt und die Installationsdatei von FireAMP für Windows.

AMP for End	3 Inst DOINTS 1 detection (7 de	talls Announcements & Support tys)	? Help 🍐 My Account 🔅 Log Out		
Dashboard Analysis - Outbreak Cor	ntrol - Reports Management - Ac	counts - Search	n Q)		
Download Connecto	or				
Group Audit	•				
FireAMP Windows	Audit Policy	SireAMP Mac	Audit Policy for FireAMP Mac Flash Scan on Install

	Show URL Download		Show URL Download		
. A FireAMP Linux	Audit Policy for FireAMP Li Flash Scan on Install	FireAMP Android Activation Codes	Default FireAMP Android		
Show GPG Public Key	Show URL Download		Show URL Download		

Hinweis: Beim Herunterladen dieser Datei wird eine .exe-Datei mit dem Namen **Audit_FireAMPSetup.exe** im Beispiel generiert. Diese Datei wurde an den Webserver gesendet, um verfügbar zu sein, sobald der Benutzer die Konfiguration von AMP anfordert.

ISE konfigurieren

Schritt 1: Konfigurieren von Statusrichtlinien und -bedingungen

Navigieren Sie zu Richtlinien > Richtlinienelemente > Bedingungen > Status > Dateibedingung.Sie können sehen, dass eine einfache Bedingung für das Vorhandensein einer Datei erstellt wurde. Wenn der Endpunkt mit der vom Postmodul verifizierten Richtlinie übereinstimmen soll, muss eine Datei vorhanden sein:

cisco Identity Services Engine	Home	sibility • Operations	* Policy	Administration	 Work Centers
Authentication Authorization Profile	ing Posture Client Pre	visioning Policy Eleme	ents		
Dictionaries Conditions Result	S				
0	Ella Conditiona List > E	la Castillas

- Client Provisioning	Agent Behavior
Resources	Parameter

• Fügen Sie im Abschnitt Status Protocol (Status-Protokoll) * hinzu, damit der Agent eine Verbindung zu allen Servern herstellen kann.

Parameter	Value	Notes
PRA retransmission time	120 secs	
Discovery host		
* Server name rules	•	need to be blank by default to force admin to enter a value. *** means agent will connect to all

Schritt 3: Konfigurieren des AMP-Profils

sture Pr

Das AMP-Profil enthält Informationen zum Speicherort des Windows-Installationsprogramms.

Windows Installer wurde zuvor von der AMP-Cloud heruntergeladen. Der Zugriff sollte vom Client-Computer aus möglich sein. Das Zertifikat des HTTPS-Servers, in dem sich Installer befindet, sollte auch vom Clientcomputer vertrauenswürdig sein.

dentity Services E	ingine	Home Context V	/isibility	Operations	▼ Policy	Administration	• Work Centers

		Add to Start Menu					
		Add to Desktop					
		Add to Context Menu					
		Submit Cancel)				

Schritt 2: Hochladen von Anwendungen und XML-Profil auf die ISE

- Laden Sie die Anwendung manuell von der offiziellen Cisco Website herunter: **anyconnectwin-4.2.02075-k9.pkg**
- Navigieren Sie auf der ISE zu Richtlinien > Richtlinienelemente > Ergebnisse > Client Provisioning > Resources, und fügen Sie **Agent Resources from Local Disk** hinzu.
- Wählen Sie Von Cisco bereitgestellte Pakete aus, und wählen Sie anyconnect-win-4.2.02075k9.pkg

cisco	Identity	y Services Er	rgine	Home	Context Visibility	Operations	* Policy	 Admini 	stration	Work Centers

	Description		
		Browse VPNDisa	ble_ServiceProfile.xml
	Submit Cancel		

Hinweis: VPNDisable_ServiceProfile.xml wird verwendet, um den VPN-Titel auszublenden, da in diesem Beispiel kein VPN-Modul verwendet wird. Dies ist der Inhalt von VPNDisable_ServiceProfile.xml:

<AnyConnectProfile xmlns="<u>http://schemas.xmlsoap.org/encoding/"</u> xmlns:xsi="<u>http://www.w3.org/2001/XMLSchema-instance"</u> xsi:schemaLocation="<u>http://schemas.xmlsoap.org/encoding/</u> AnyConnectProfile.xsd"> <ClientInitialization="<u>http://schemas.xmlsoap.org/encoding/</u> AnyConnectProfile.xsd"> <ClientInitialization="<u>http://schemas.xmlsoap.org/encoding/</u> AnyConnectProfile.xsd"> <ClientInitialization= </ClientInitialization> </ClientInitialization> </AnyConnectProfile>

Schritt 3: AnyConnect Compliance-Modul herunterladen

- Navigieren Sie zu Richtlinien > Richtlinienelemente > Ergebnisse > Client Provisioning > Resources, und fügen Sie Agent Resources von Cisco hinzu.
- Wählen Sie AnyConnect Windows Compliance Module 3.6.10591.2 aus, und klicken Sie auf Speichern.

For AnyConnect software, please download from http://cisco.com/go/anyconnect. Use the "Agent resource from local disk" add option, to import into ISE

Save Cancel

×

Schritt 4: AnyConnect-Konfiguration hinzufügen

- Navigieren Sie zu Richtlinien > Richtlinienelemente > Ergebnisse > Client Provisioning > Resources, und fügen Sie die AnyConnect-Konfiguration hinzu
- Konfigurieren Sie den Namen, und wählen Sie das Compliance-Modul und alle erforderlichen AnyConnect-Module (VPN, AMP und Status) aus.
- Wählen Sie in **Profile Selection** (Profilauswahl) das Profil aus, das zuvor für jedes Modul konfiguriert wurde.

Überprüfen

Endpunkt

Herstellen einer Verbindung zum Wireless-Netzwerk über PEAP (MSCHAPv2).

Windows Securit	у	×
Network A Please enter us	uthentication er credentials	
	alice	
		OK Cancel

Nach dem Herstellen der Verbindung erfolgt die Umleitung zum Client Provisioning Portal.

Da auf dem Client-Computer nichts installiert ist, fordert die ISE zur Installation des AnyConnect-Clients auf.

Die NSA-Anwendung (Network Setup Assistant) sollte vom Client-Computer heruntergeladen und ausgeführt werden.

Die NSA übernimmt die Installation der erforderlichen Komponenten und Profile.

Nach Abschluss der Installation führt das AnyConnect Posture-Modul eine Compliance-Prüfung durch.

Applications	These are applications external to FireAMP, such as Sourcefire's Defense Center, that you have authorized to access your business' data.					
AMP Adaptor 4d4047dc-4791-477d-955f-6a0f182ae65b IRF Edit Deregister 	Here you can deauthorize registered applications, thus revoking their access to specific functionality, or you can deregister the applications, thus deauthorizing them and completely removing them from the FireAMP system.					
AMP Adaptor fe80e16e-cde8-4d7f-a836-545416ae56f4 IRF Edit Deregister	You can currently authorize Defense Center appliances to receive streaming FireAMP events for integration with the Defense Center.					

ISE

Bei der ISE selbst wird ein regelmäßiger Status-Flow erkannt. Die Umleitung erfolgt zuerst, um die Einhaltung der Netzwerkrichtlinien zu überprüfen. Sobald der Endpunkt kompatibel ist, wird CoA-Authentifizierung gesendet und ein neues Profil mit PermitAccess zugewiesen.

Wenn ein Bedrohungsereignis für einen Endpunkt erkannt wird, können Sie die MAC-Adresse des Endpunkts auf der Seite "Kompromittierte Endgeräte" auswählen und eine ANC-Richtlinie anwenden (sofern konfiguriert, z. B. Quarantäne). Alternativ können Sie Change of Authorization (Autorisierungsänderung) ausgeben, um die Sitzung zu beenden.
