## Einleitung

In diesem Dokument wird beschrieben, wie TrustSec auf dem Catalyst 9800 und ISE-Server für die Verwendung der SGACL-Funktion mit lokalen und FlexConnect-Modus-APs konfiguriert wird.

## Voraussetzungen

### Anforderungen

Kenntnis der Grundlagen von Cisco 9800 WLC, Cisco ISE, FlexConnect und TrustSec

### Verwendete Komponenten

Die Informationen in diesem Dokument basierend auf folgenden Software- und Hardware-Versionen:

- C9800-CL v17.12.4
- ISE 3.2.0
- Access Point 9136i

Die Informationen in diesem Dokument beziehen sich auf Geräte in einer speziell eingerichteten Testumgebung. Alle Geräte, die in diesem Dokument benutzt wurden, begannen mit einer gelöschten (Nichterfüllungs) Konfiguration. Wenn Ihr Netzwerk in Betrieb ist, stellen Sie sicher, dass Sie die möglichen Auswirkungen aller Befehle kennen.

# Konfigurieren

## Netzwerkdiagramm

Netzwerkdiagramm

## Konfigurationen

### WLC-Konfiguration

1. Fügen Sie den AAA-Server dem WLC hinzu. Gehen Sie dazu wie folgt vor: Configuration > Security > AAA:

The screenshot shows the WLC configuration interface under the "AAA" section. The left sidebar includes "Dashboard", "Monitoring", "Configuration", "Administration", "Licensing", and "Troubleshooting". The main area shows the "AAA Wizard" and "Servers / Groups" tab selected. A table lists a single RADIUS server entry:

Name	Address	Auth Port	Acct Port
AAAserver	10.48.39.101	1812	1813

A note at the bottom states: "For Radius Fallback to work, please make sure the [Dead Criteria](#) and [Dead Time](#) configuration exists on the device".

WLC AAA-Seite

2. Stellen Sie sicher, dass die Schlüsseleinträge mit dem Schlüssel übereinstimmen, wenn Sie das Gerät zur ISE hinzufügen. Aktivieren Sie Support für CoA, und fügen Sie den Schlüssel hinzu, wenn Sie CoA zum Herunterladen der Konfigurationsaktualisierungen verwenden möchten:

The screenshot shows the WLC AAA Radius Server configuration interface. The left sidebar has 'Configuration' selected. In the main area, 'AAA' is selected under 'Servers / Groups'. On the right, the 'Edit AAA Radius Server' dialog is open for 'AAAServer'. The dialog contains fields for Name (AAAServer), Server Address (10.48.39.101), Set New Key, PAC Key, PAC Key Type (Clear Text), PAC Key (\*\*\*\*\*), Confirm PAC Key (\*\*\*\*\*), Auth Port (1812), Acct Port (1813), Server Timeout (seconds) (1-1000), and Retry Count (0-100). The 'Support for CoA' checkbox is checked, and the 'CoA Server Key Type' dropdown is set to 'Hidden' with a password shown as '\*\*\*\*\*'. The 'Update & Apply to Device' button is at the bottom right.

WLC AAA-Server hinzufügen

3. Servergruppe erstellen:

The screenshot shows the WLC Servergruppe configuration interface. The left sidebar has 'Configuration' selected. In the main area, 'AAA' is selected under 'Server Groups'. On the right, the 'Server Groups' table is displayed, showing a single entry for 'ISE-group' with 'AAAServer' assigned to 'Server 1'. The table has columns for Name, Server 1, Server 2, and Server 3. The footer indicates 1 - 1 of 1 items.

WLC Servergruppe hinzufügen

4. Fügen Sie die Liste der Autorisierungsmethoden mit dem Netzwerktyp hinzu:

## Quick Setup: AAA Authorization

X

Method List Name*	<input type="text" value="ISE-Authz-List"/>
Type*	<input type="text" value="network"/> <span style="font-size: small;">▼</span> <span style="font-size: small; border: 1px solid #ccc; padding: 2px 5px;">i</span>

ISE-Authz-List	network	group	ISE-group	N/A	N/A	N/A

WLC AAA-Servergruppe

5. Navigieren Sie zu Configuration > Security > TrustSec, und konfigurieren Sie die CTS Geräte-ID und das CTS-Kennwort. Sie verwenden diese Einträge, wenn Sie das Gerät zur ISE hinzufügen.

Konfigurieren Sie auch hier die CTS-Autorisierungsliste, die Sie in Schritt 4 erstellt haben:

The screenshot shows the 'CTS Credentials' section of the Trustsec configuration. It includes fields for 'CTS Device ID' (9800labWLC), 'CTS Password' (\*\*\*\*\*), 'CTS Authorization List' (ISE-Authz-List), and 'CTS Device SGT' (2). A blue 'Apply' button is located in the top right corner.

WLC TrustSec

6. In diesem Beispiel ist das WLAN bereits erstellt und die Authentifizierungseinstellungen sind bereits konfiguriert.

Navigieren Sie nun zu dem Richtlinienprofil, in dem Sie SGTs verwenden möchten.

i. Aktivieren Sie unter CTS Policy (CTS-Richtlinie) Inline Tagging und SGACL Enforcement (SGACL-Durchsetzung), und geben Sie auch das Standard-SGT an. Das Standard-SGT 2 wird für diese Übung als Beispiel verwendet:

The screenshot shows the 'Edit Policy Profile' dialog for 'SQLtest'. The 'General' tab is selected. Under 'CTS Policy', the 'Inline Tagging' and 'SGACL Enforcement' checkboxes are checked, and the 'Default SGT' is set to 2. Other tabs like 'Access Policies' and 'QoS and AVC' show various configuration options with checkboxes and dropdowns. A red box highlights the 'CTS Policy' section.

WLC-Richtlinienprofil

ii) Aktivieren Sie auf der Registerkarte Advanced die Option Allow AAA override and NAC state:

## Edit Policy Profile

General   Access Policies   QoS and AVC   Mobility   **Advanced**

(config-wireless-policy)# cts sgt <number>
(config-wireless-policy)# no shut

# show cts credentials
CTS password is defined in keystore, device-id = 98001abWLC

```

## ISE-Konfiguration

1. Navigieren Sie zu Administration > Network Resources > Network Devices (Verwaltung > Netzwerkressourcen > Netzwerkgeräte).

i. Fügen Sie hier die WLC-Informationen hinzu:

The screenshot shows the Cisco ISE interface under 'Administration - Network Resources'. In the left sidebar, 'Network Devices' is selected. On the main page, there's a table for 'Network Devices' with one entry: 'Name' is set to '9800labWLC'. Below the table, there are fields for 'IP Address' (set to '10.48.38.67') and 'Subnet Mask' (set to '32').

ISE-Netzwerkgeräteseite

This screenshot shows the same Cisco ISE interface as above, but with more detailed configuration options for the device. Under 'Device Profile', it is set to 'Cisco'. The 'Model Name' field is empty. The 'Software Version' dropdown is visible. Below these, there are sections for 'Network Device Group', 'Location' (set to 'All Locations'), 'IPSEC' (set to 'No'), and 'Device Type' (set to 'All Device Types'). A collapsed section titled 'RADIUS Authentication Settings' is expanded, showing 'Protocol' set to 'RADIUS' and 'Shared Secret' set to '\*\*\*\*\*'. There is also an option 'Use Second Shared Secret' with a checkbox.

ISE WLC RADIUS-Informationen hinzufügen

ii) Scrollen Sie nach unten, und konfigurieren Sie die erweiterten TrustSec-Einstellungen. Aktivieren Sie das Kontrollkästchen Use Device ID for TrustSec Identification (Geräte-ID für TrustSec-Identifizierung verwenden), und konfigurieren Sie das Kennwort:

The screenshot shows the Cisco ISE interface under 'Administration - Network Resources'. The 'Network Devices' tab is selected. In the left sidebar, 'Network Devices' is expanded, showing 'Default Device' and 'Device Security Settings'. On the right, under 'Advanced TrustSec Settings', the 'Use Device ID for TrustSec Identification' checkbox is checked. The 'Device Id' field contains '9800labWLC'. The 'Password' field shows masked input, with a 'Show' link next to it.

Erweiterte TrustSec-Einstellungen

Dies muss mit der Konfiguration auf WLC-Seite in Schritt 6 der WLC-Konfiguration übereinstimmen.

iii. Blättern Sie nach unten zu TrustSec-Benachrichtigungen und -Updates, und konfigurieren Sie, ob Sie CoA oder SSH für Konfigurationsaktualisierungen verwenden möchten. Wählen Sie den benötigten ISE-Knoten aus:

Network Devices    Network Device Groups    Network Device Profiles    External RADIUS Servers    RADIUS Server Sequences    NAC Managers

**Network Devices**

Default Device

Device Security Settings

**TrustSec Notifications and Updates**

Download environment data every  Seconds ▾

Other TrustSec devices to trust this device

Send configuration changes to device

CoA

CLI (SSH)

Send from varusrin-ise ▾ [Test connection](#)

Ssh Key

TrustSec-Benachrichtigungen und -Updates

2. Drücken Sie auf Verbindung testen, um sicherzustellen, dass die Verbindung hergestellt ist. Wenn es erfolgreich ist, wird es ein grünes Häkchen zeigen:

Send configuration changes to device

CoA

CLI (SSH)

Send from varusrin-ise ▾ [Test connection](#)

Ssh Key

Testverbindung

i. Scrollen Sie nach unten, und konfigurieren Sie den WLC so, dass er bei der Bereitstellung von Updates für die SGT-Zuordnung eingeschlossen ist. Dies ist wichtig, wenn Sie im vorherigen Schritt die SSH-Option auswählen:

The screenshot shows the 'Device Configuration Deployment' section with the checkbox 'Include this device when deploying Security Group Tag Mapping Updates' checked. Below it, the 'Device Interface Credentials' section lists three fields: 'EXEC Mode Username' (admin), 'EXEC Mode Password' (redacted), and 'Enable Mode Password' (redacted). Each password field has a 'Show' link to its right.

Bereitstellung der Gerätekonfiguration

## ii) Speichern Sie die Konfiguration.

3. Aus Work Centers > TrustSec > Overview (Übersicht) werden die TrustSec-Konfigurationsoptionen angezeigt. Wählen Sie TrustSec AAA Server aus, um die verwendete ISE-Instanz anzuzeigen. Weitere Informationen zur verwendeten Instanz bei mehreren [Catalyst Wireless-Geräten](#) finden Sie in der [Cisco Catalyst Wireless Group Based Policy \(Gruppenbasierte Richtlinie für Cisco Catalyst Wireless\)](#).

The screenshot shows the 'Work Centers - TrustSec' dashboard. The left sidebar has 'Overview' selected. The main area is titled 'TrustSec Overview' and contains three sections: '1. Prepare', '2. Define', and '3. Go Live & Monitor'. Each section has a brief description and a list of tasks or steps. The 'Prepare' section includes 'Plan Security Groups', 'Preliminary Setup' (with 'TrustSec AAA server' highlighted in red), and 'Exchange Policy'. The 'Define' section includes 'Create Components' and 'Policy'. The 'Go Live & Monitor' section includes 'Push Policy', 'Real-time Monitoring', and 'Auditing'.

ISE TrustSec - Überblick

4. (Optional) Navigieren Sie zur Registerkarte Einstellungen, und aktivieren Sie ggf. nach jeder Bereitstellung die automatische Überprüfung.

## General TrustSec Settings

TrustSec Matrix Settings

Work Process Settings

SXP Settings

ACI Settings

## General TrustSec Settings

## Verify TrustSec Deployment

 Automatic verification after every deploy [\(i\)](#)Time after deploy process  minutes (10-60) [\(i\)](#)[Verify Now](#)

## Protected Access Credential (PAC)

\*Tunnel PAC Time To Live  Days [\(i\)](#)\*Proactive PAC update when  % PAC TTL is Left

## Security Group Tag Numbering

 System Will Assign SGT Numbers Except Numbers In Range - From  To  User Must Enter SGT Numbers Manually

ISE TrustSec-Einstellungen

5. Fügen Sie die SGT-Werte je nach Anforderungen von Work Centers > TrustSec > Components > Security Groups hinzu, oder bearbeiten Sie diese:

## Security Groups

IP SGT Static Mapping

Security Group ACLs

Network Devices

## Trustsec Servers

## Security Groups

For Policy Export go to [Administration > System > Backup & Restore > Policy Export Page](#)Selected 0 Total 16 [\(i\)](#)All [\(i\)](#)[Edit](#) [Add](#) [Import](#) [Export](#) [Trash](#) [Push](#) [Verify Deploy](#)

<input type="checkbox"/>	Icon	Name	SGT (Dec / Hex)	Description	Learned from
<input type="checkbox"/>		Auditors	9/0009	Auditor Security Group	
<input type="checkbox"/>		BYOD	15/000F	BYOD Security Group	
<input type="checkbox"/>		Contractors	5/0005	Contractor Security Group	
<input type="checkbox"/>		Developers	8/0008	Developer Security Group	
<input type="checkbox"/>		Development_Servers	12/000C	Development Servers Security Group	
<input type="checkbox"/>		Employees	4/0004	Employee Security Group	
<input type="checkbox"/>		Guests	6/0006	Guest Security Group	
<input type="checkbox"/>		Network_Services	3/0003	Network Services Security Group	
<input type="checkbox"/>		PCI_Servers	14/000E	PCI Servers Security Group	
<input type="checkbox"/>		Point_of_Sale_Systems	10/000A	Point of Sale Security Group	
<input type="checkbox"/>		Production_Servers	11/000B	Production Servers Security Group	
<input type="checkbox"/>		Production_Users	7/0007	Production User Security Group	
<input type="checkbox"/>		Quarantined_Systems	255/00FF	Quarantine Security Group	

6. Wenn Sie die Autorisierungsrichtlinie angeben möchten, navigieren Sie zu Work Centers > TrustSec > TrustSec Policy > Network Device Authorization:

Rule Name	Conditions	Security Group
Default Rule	If no rules defined or no match	then TrustSec_Devices

TrustSec-Richtlinie

Sie können die Standardeinstellung beibehalten, für diese Übung verwenden wir jedoch diese Konfiguration als Beispiel:

Rule Name	Conditions	Security Group
Netdevice	If DEVICE Device Type equals to Device Type>All Device Types	then TrustSec_Devices
Default Rule	If no rules defined or no match	then Unknown

Autorisierung von Netzwerkgeräten

7. Erstellen Sie die SGACL auf der Registerkarte Components (Komponenten) und anschließend die Security Group ACLs:

Cisco ISE		Work Centers - TrustSec						
Overview	Components	TrustSec Policy	Policy Sets	SXP	ACI	Troubleshoot	Reports	Settings
Security Groups								
IP SGT Static Mapping								
Security Group ACLs								
Network Devices								
Trustsec Servers	>							

## Sicherheitsgruppen-ACLs

8. Geben Sie die Matrixeinträge auf der Registerkarte TrustSec Policy (TrustSec-Richtlinie) und dann Matrix an. Sie können die Berechtigungen bearbeiten, indem Sie auf den Punkt klicken, den zwei SGTs erfüllen:

ISE TrustSec-Matrix

## Beispiele:

## Edit Permissions...

Source Security Group Contractors (5/0005)  
Destination Security Group Contractors (5/0005)

Status  Enabled ▾

Description

### Assigned Security Group ACLs

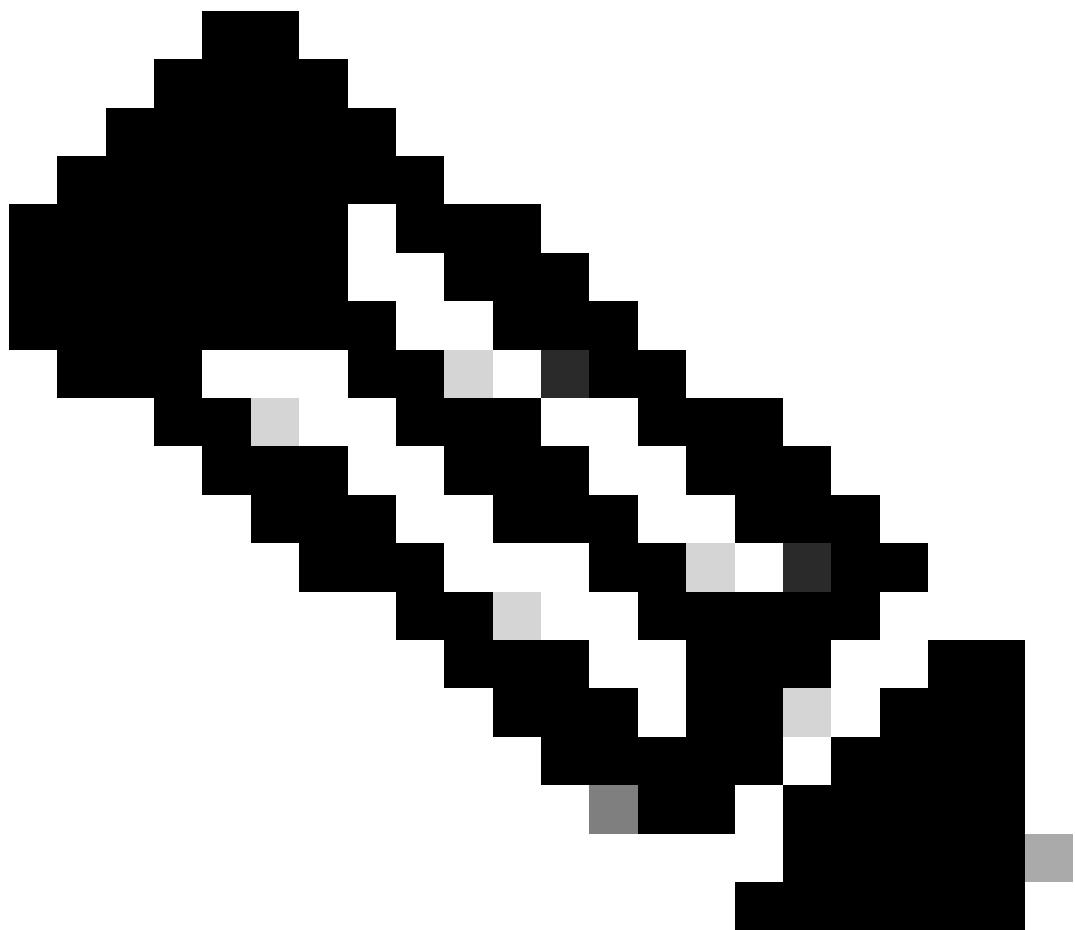

CustomDefaultSGTACL ▾

Final Catch All Rule Permit IP ▾

[Cancel](#)

[Save](#)

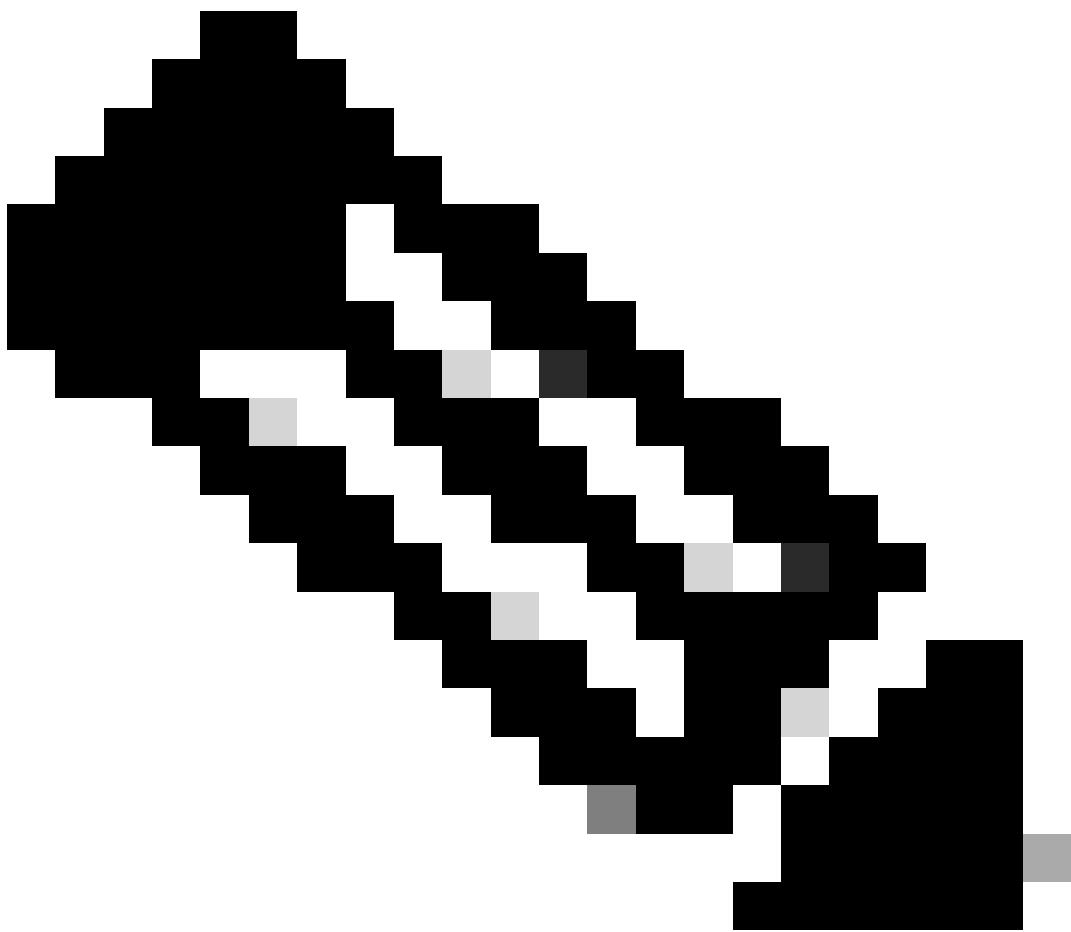

Berechtigungen bearbeiten

---

Anmerkung: Im Fall des Allow List-Modells müssen Sie den Client-Geräten explizit erlauben, dass das DHCP-Protokoll die DHCP-IP-Adresse abruft, und dann den Controller für SGACL-Richtlinien anfordern.

---

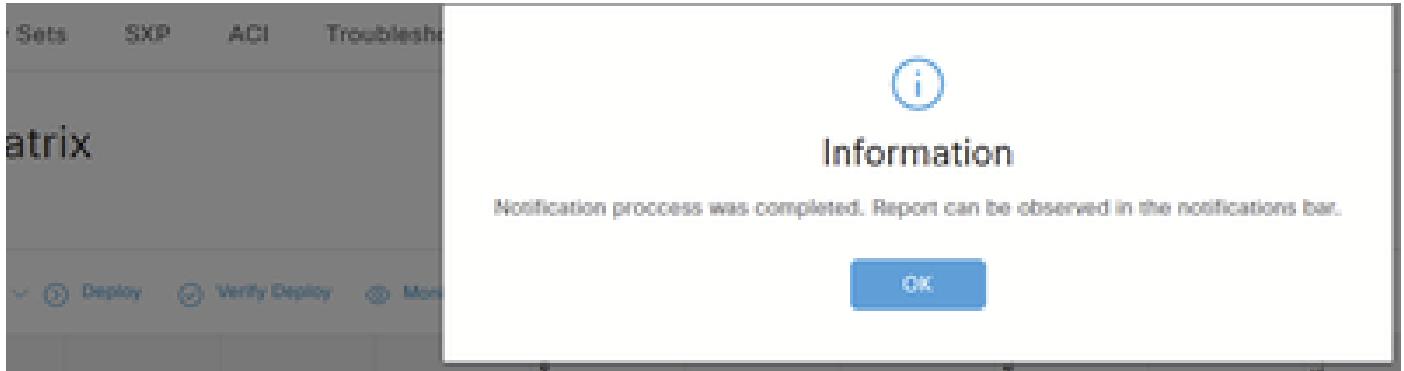

Anmerkung: Clients erhalten keinen SGT-Wert, und DHCP-Clients erhalten eine automatische private IP-Adressierungsadresse (APIPA), wenn die TrustSec-Richtlinie in der TrustSec-Matrix abgelehnt wird.

Clients erhalten die richtigen SGT-Werte, und DHCP-Clients erhalten eine IP-Adresse, wenn die TrustSec-Richtlinie in der TrustSec-Matrix als "unbekannt" zugelassen ist.

---

9. Klicken Sie auf Bereitstellen. Die folgenden Nachrichten und Benachrichtigungen werden angezeigt:

Bereitstellung

A screenshot of a network management interface. On the right side, there's a blue circular badge with the number '2'. Below it, a message says 'Completed sending 2 TrustSec CoA notifications to 2 relevant network devices.' To the right of this message is a large blue 'Ok' button. Further down, another message states 'There are TrustSec configuration changes that has not been notified to network devices. To notify the relevant network devices about these changes click the push button.' To the right of this message is a blue 'Push' button. At the bottom right, the word 'All' is underlined in blue.

Benachrichtigungen bereitstellen

10. Navigieren Sie zu dem für das WLAN verwendeten Richtliniensatz unter Richtlinie > Richtliniensätze:

A screenshot of the Cisco ISE 'Policy Sets' page. The title bar says 'Cisco ISE' and 'Policy • Policy Sets'. There are buttons for 'Reset', 'Reset Policyset Hitcounts', and 'Save'. The main area shows a table with columns: Status, Policy Set Name, Description, Conditions, Allowed Protocols / Server Sequence, Hits, Actions, and View. A search bar labeled 'Search' is at the top of the table. Below the table, there are sections for 'Conditions' and 'Default Network Access' with various configuration options.

ISE-Richtliniensätze

In dieser Übung definieren wir das SGT pro Benutzer. Wählen Sie das SGT im Feld Security Groups (Sicherheitsgruppen) aus:

Status	Policy Set Name	Description	Conditions	Allowed Protocols / Server Sequence	Hits
Green	SGT set		AND Network Access Device IP Address EQUALS 10.48.38.67 Wireless_Roam.TX	Default Network Access	

> Authentication Policy (1)  
> Authorization Policy - Local Exceptions  
> Authorization Policy - Global Exceptions (1)  
< Authorization Policy (3)

Status	Rule Name	Conditions	Results
Green	Authorization Rule 2	InternalUser Name EQUALS userb	Profiles PermitAccess
Green	Authorization Rule 1	InternalUser Name EQUALS usera	Profiles PermitAccess
Green	Default		Profiles DenyAccess Select from list

Security Groups  
Contractors  
Employees

ISE-Sicherheitsgruppen

## Flexconnect

Aktivieren Sie Inline-Tagging und die SGACL-Durchsetzung auf dem Flex Profile unter Konfiguration > Tags und Richtlinien > Flex:

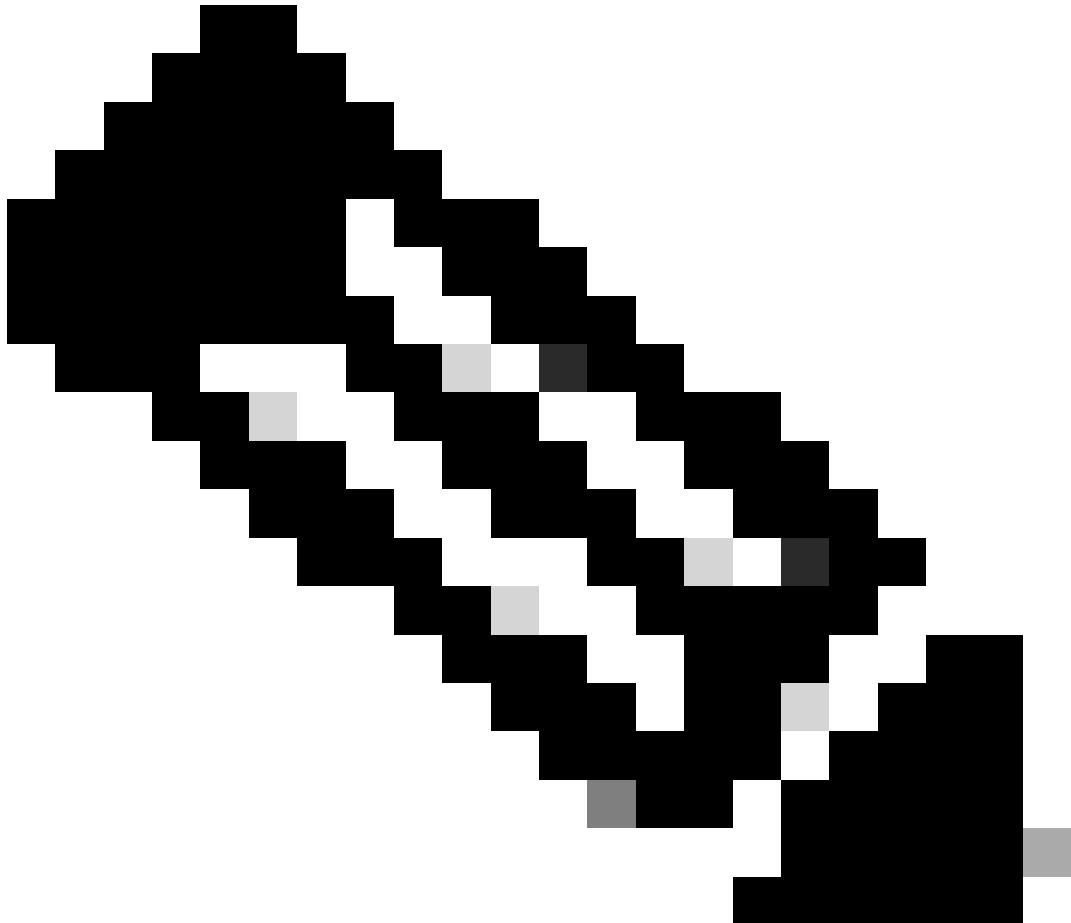

Edit Flex Profile		
General	Local Authentication	Policy ACL
Name*: SGflex	Fallback Radio Shut	<input type="checkbox"/>
Description: Enter Description	Flex Resilient	<input type="checkbox"/>

```

## FlexConnect - Lokales Switching

- Dies ist der WLC-Ausgang vor dem Verbinden der Clients mit dem AP:

```

<#root>
#
show cts ap sgt-info

```

Number of SGTs referred by the AP.....: 4

SGT	PolicyPushedToAP	No.of Clients
-----		
UNKNOWN(0)	NO	0
2	NO	1
DEFAULT(65535)	YES	0

- Von der AP-CLI werden die Berechtigungen ausgegeben, bevor Clients mit dem AP verbunden werden:

```

AP#show cts role-based permissions
IPv4 role-based permissions:
SGT DGT ACL
65535 65535 Permit_IP

IPv6 role-based permissions:
SGT DGT ACL
65535 65535 Permit_IP

```

- Dies sind die AP-Debugging-Vorgänge, die der Client beim Herstellen einer Verbindung durchführt, um den Datenfluss anzuzeigen:

<#root>

## Fehlerbehebung

- Über die WLC-CLI:

**show cts bereitstellung**

**show cts rollenbasierte Berechtigungen**

**IP-Zugriffslisten anzeigen**

**show cts ap sgt-info <ap\_name>**

- Vom AP:

**show cts rollenbasierte sgt-map all**

show cts rollenbasierte Berechtigungen  
show cts-Zugriffslisten <acl-name>  
show cts rollenbasierte sgt-map zusammenfassung  
show cts-Zugriffslisten  
Flexconnect-Client anzeigen  
Clear CTS, rollenbasierte Zähler  
Anzeige von CTS-rollenbasierten Zählern

- AP-Debugging:
- Aktiviert das Debuggen der CTS-Paketdurchsetzung:

debug cts-Durchsetzung  
Laufzeit

- So überprüfen Sie CAPWAP-ACL-Ereignisse und Payload-bezogene Informationen:

debug dot11 client access-list <client-mac-addr>  
debug capwap client acl  
debug capwap client payload  
debug capwap client error  
debug dot11 Client-Verwaltungsinformationen
