

Cisco Virtualization Experience Media Edition for SUSE Linux 11.5

Extend the rich collaboration experience of Cisco Jabber for Windows to your virtualized environments by enabling intelligent processing of real-time voice and video on your local devices.

Product Overview

The Cisco Jabber® platform streamlines communications and enhances productivity on many platforms and devices, including PCs, Macs, tablets, and smartphones. It unifies presence, instant messaging, video, voice, voice messaging, and conferencing capabilities more securely into one client on your desktop.

But what if your organization is implementing virtualization strategies? Now you can use the Cisco® Virtualization Experience Media Edition to deliver the same rich, uncompromised user experience of the Cisco Jabber application to virtualized desktops in addition to your PCs, Macs, tablets, and smartphones.

How It Works

In virtualized environments, the Cisco Jabber application is deployed in the hosted virtual desktop in the data center while Virtualization Experience Media Edition runs on the local thin client. With the Cisco Jabber application running on your hosted virtual desktop, you can see presence status, send an instant message, check voice messages, or collaborate over voice and video calls. Media Edition processes voice and video traffic locally and routes point to point between clients, bypassing the data center. This feature eliminates the inefficient “hairpin” effect that returns messages from origin endpoints back in the direction from which they came as a way to get them to their destination. With this optimized architecture, users in virtualized settings benefit from the same uncompromised experience that they enjoy with the traditional Cisco Jabber for Windows solution.

Features and Benefits

Table 1 lists the features and benefits of Virtualization Experience Media Edition.

Table 1. Features and Benefits

Feature	Benefit
Cisco Jabber platform on the virtual desktop	<ul style="list-style-type: none"> Rich collaboration that supports the uncompromised user experience of the Cisco Jabber application
Local voice and video processing	<ul style="list-style-type: none"> Efficient use of local thin-client resources to reduce network bandwidth and data center resources, eliminating the hairpin effect for an exceptional user experience
Cisco Precision Video Engine	<ul style="list-style-type: none"> High-fidelity wideband audio and business-quality video communications up to high-definition (720p at 30 frames per second [fps]) Standards-based (H.264) video for interoperability with telepresence endpoints and video conferencing systems
Secure Real-Time Transport Protocol (SRTP)	<ul style="list-style-type: none"> Highly secure media encryption
Highly secure remote access	<ul style="list-style-type: none"> Highly secure remote access through native Cisco AnyConnect® Secure Mobility Client
Citrix XenDesktop, Citrix XenApp (Published Desktop), and VMware View	<ul style="list-style-type: none"> Support for superior Cisco Virtualization Experience Infrastructure experience

System Requirements

Table 2 outlines the system requirements for Cisco Virtualization Experience Media Edition.

Table 2. System Requirements for Cisco Jabber Application with Virtualization Experience Media Edition

SUSE Linux thin clients	Dell Wyse D50D, Z50D, D50Q, Z50Q, or Z50QQ
SUSE Linux platform image	Refer to release notes for more information
Cisco Unified Communications Manager	Version 9.x or later
Accessories	For a complete list of supported accessories, refer to the Cisco Unified Communications Accessories site.

Note: Cisco Jabber Binary Floor Control Protocol (BFCP) desktop share, desk phone video (display of video on the desktop when the thin client is tethered to the user's desk phone), hunt group, call pickup, call statistics, Federal Information Processing Standards/Information Assurance (FIPS/IA) compliance, collaboration edge, Kerberos/Call Admission Control (CAC) support with Single Sign-On (SSO), Far-End Camera Control (FECC), and Cisco Unified Survivable Remote Site Telephony (SRST) are not supported with Cisco Virtualization Experience Media Edition for Windows.

Cisco Unified Communications Services

Cisco and our certified partners can help you deploy a highly secure, resilient Cisco Unified Communications solution so you can meet aggressive deployment schedules and accelerate your business advantage. The Cisco portfolio of services is based on proven methodologies for unifying voice, video, data, and mobile applications on fixed and mobile networks.

The unique Cisco lifecycle approach to services defines the requisite activities at each phase of the solution lifecycle. Customized planning and design services focus on creating a solution that meets your business needs. Award-winning technical support increases operational efficiency. Remote-management services simplify day-to-day operations, and optimization services enhance solution performance as your business needs change.

Cisco Capital

Financing to Help You Achieve Your Objectives

Cisco Capital can help you acquire the technology you need to achieve your objectives and stay competitive. We can help you reduce CapEx. Accelerate your growth. Optimize your investment dollars and ROI. Cisco Capital[®] financing gives you flexibility in acquiring hardware, software, services, and complementary third-party equipment. And there's just one predictable payment. Cisco Capital is available in more than 100 countries. [Learn more.](#)
