

# Cisco Packaged Contact Center Enterprise 11.0

## Solution Overview

Cisco® Packaged Contact Center Enterprise (PCCE) is a simplified, packaged solution specifically designed for customers with 1,500 contact center seats or fewer; it offers easier ordering with a price advantage; reduced presales and postsales cycles; and simplified deployment, operation, and maintenance. Cisco PCCE includes Cisco Unified Communications Manager, Unified Contact Center Enterprise, and Unified Customer Voice Portal. The solution comes with Cisco Unified Intelligence Center for comprehensive reporting and Cisco Finesse® desktop software for an enhanced, next-generation agent desktop experience. Cisco PCCE runs on a single server with a second server required for redundancy.

Cisco PCCE provides an enterprise-class contact center in a prepackaged deployment model that's easy to install, configure, and administer.

Table 1 lists the new features and benefits available in the latest release of Cisco Packaged Contact Center Enterprise.

**Table 1.** Cisco Packaged Contact Center Enterprise 11.0 Features and Benefits

Feature	Benefits
<b>Solutions Benefits</b>	
<b>Capacity Increases</b>	Cisco PCCE scales up to 1,500 agents, 150 supervisors, and 2,700 interactive voice response (IVR) ports
<b>Context Service enabled</b>	Support is added for Context Service, a cloud-based omnichannel service that provides storage, tagging, and management of the data from interactions between businesses or organizations and their customers. The context/history provided by the service helps customer care agents better understand and respond to the needs of customers. For more information about Context Service and its availability, see <a href="http://docwiki.cisco.com/wiki/Context_Service">http://docwiki.cisco.com/wiki/Context_Service</a> .
<b>Remote Expert</b>	Live video interactions between agents and consumers are supported via Cisco Remote Expert Mobile and Branch.
<b>Outbound enrichment</b>	Call-progress analysis (CPA) (aka answering machine detection) is enabled for the UCCE Outbound Dialer when using Cisco Unified Border Element (Cisco UBE). New Outbound reports include new performance monitoring (PerfMon) counters and Personal Call-Back improvements for better agent usage.
<b>Extension Mobility</b>	The product supports a Cisco Unified Communications Manager feature that allows agents to temporarily access their Cisco Unified IP Phone configuration, such as line appearances, services, and speed dials, from other Unified IP Phones.
<b>IP Phone Agent</b>	Cisco PCCE supports Finesse IP Phone Agent, allowing agents to use their Cisco IP phone to perform common agent tasks such as setting their state (e.g., ready or not ready).
<b>Cisco Unified Computing System™ (Cisco UCS®), Cisco Integrated Services Router (ISR) Generation 3 and Cisco Nexus® support</b>	Cisco UCS B200 M3 and Cisco UCS B200 M4 Blade Servers; and Cisco UCS C260 M2 and Cisco UCS C240 M3S Rack-Mount Servers are supported. Support for the Cisco Nexus 1000V Switch (running on a virtual machine) provides multitenant secure Layer 4 - 7 networking services for the PCCE environment. Cisco PCCE is supported with Cisco ISR Generation 3 (series 4xxx) Gateways.
<b>Installation and Administration enhancements</b>	Enhancements include simplified installation workflow to initialize and configure the solution within minutes and a New Labels gadget that allows administrators to view and update Network Voice Response Unit labels from the PCCE Administrative interface.
<b>IPv6 dual-mode</b>	The product supports IPv6 endpoints in dual-network mode, enabling easier migration from IPv4.
<b>Platform upgrades</b>	Cisco PCCE supports Windows 2012 R2 and SQL 2014.

Table 2 lists the continuing features and benefits of the product.

**Table 2.** Features and Benefits of Cisco Packaged Contact Center Enterprise

Feature	Benefits
<b>Solutions Benefits</b>	
<b>Reduces long-distance toll charges and network bandwidth</b>	Cisco Packaged Contact Center Enterprise treats the entire IP network as an intelligent switch, meaning that calls can be handled at the edge of the network, thereby reducing bandwidth usage.
<b>Reduces integration costs</b>	Until now, businesses had to integrate numerous products from different vendors - an expensive task that postponed service introduction. Cisco PCCE provides inbound & outbound voice/video, IVR, and web interaction. In addition, the solution supports best-in-class contact center applications such as customer relationship management (CRM), workforce management, recording and monitoring, and wallboards. By consolidating all contact center functions in a single platform, Cisco PCCE reduces capital expenditures and integration expenses while accelerating time to market for a complete contact center solution.
<b>Centralizes services</b>	For the large enterprise, the value is a centralized contact center operation in which the software and administration are maintained centrally. This centralized operation helps the branch offices avoid purchasing and maintaining the software, installing their own upgrades, and making staffing decisions independent of the rest of the company.
<b>Differentiates service</b>	By retaining "call context" as customers are transferred among agents - even between different locations and to at-home agents - a company can differentiate itself through superior customer service. For example, the information a customer has already supplied to purchase one product or service can be retrieved when the customer initiates another purchase or interaction elsewhere.
<b>Allows control of network resources</b>	The enterprise can control certain network resources, such as assigning agents to skill groups and defining routing based on a number called or caller-entered digits such as account numbers. In addition, all functions can be controlled from a single operating interface, reducing training and support requirements.
<b>Agent Capabilities and Benefits</b>	
<b>Agent greeting</b>	A configurable, automated agent greeting can be played to callers, standardizing the caller experience. The greeting helps keep the agent voices fresh because they do not have to repeat the same greeting on every call.
<b>Agent whisper</b>	Customers can play a configurable announcement to an agent right before the caller is connected, providing information about the type of call being delivered (for example, sales or tech support) and other guidance. Agents get information about the caller through their headset, speeding problem handling and improving first-call resolution.
<b>Cisco Finesse desktop software</b>	<p>The Cisco Finesse desktop is a next-generation agent and supervisor desktop solution designed to provide easy access to the applications and information required by your customer service organization through a customizable web-based interface. It offers your customer care representatives an intuitive, easy-to-use desktop design to help improve their performance and satisfaction, in turn enhancing their ability to provide quality customer service.</p> <p>For IT professionals, the Cisco Finesse application offers a thin-client agent desktop that integrates smoothly with the Cisco Collaboration portfolio. It is standards-compliant, and offers low cost of customization of the agent and supervisor desktops.</p>
<b>Management Capabilities and Benefits</b>	
<b>Supervisory features</b>	<p>Cisco PCCE allows supervisors to view agent states and call information, send text chat messages to agents, interrupt or intercept calls, record conversations, and silently monitor agent calls from the corporate network or through a remote dial-in connection. These features add value to the supervisor's role in the contact center and help them effectively manage their teams.</p> <p>With supervisor and agent chat capabilities, supervisors can send text messages to agents participating in a call, allowing supervisors to coach agents unobtrusively on cross- and up-sell opportunities and helping agents resolve customer situations. Supervisors can interrupt an agent's call to create a three-way conference, and then interact with both the caller and the agent to help resolve a concern. A supervisor can remove the agent from a call using the Intercept feature, allowing the supervisor and caller to complete the call on their own while the agent handles another customer request.</p> <p>Supervisors can change an agent's state from their desktop. For example, agents may forget to make themselves available to take calls after a break or neglect to log out when away from their workstations for an extended period. With Cisco PCCE, supervisors can easily log out missing agents or make unintentionally idle agents ready to take calls. This function is critical to highly distributed contact center deployments.</p> <p>Supervisors also can change an agent's skill profile in real time. This capability gives supervisors tactical tools to manage their agent teams and support contact center management objectives.</p>
<b>Administration</b>	<p>Streamlined administration allows managers to perform all contact center administration centrally. The administrative interface in Cisco PCCE allows agents to be set up to handle voice, web, chat, and email contacts, depending on their assigned skill sets. The interface allows system managers, administrators, and supervisors to develop, modify, or view routing scripts; manage the system configuration; monitor contact center performance; define and request reports; and help ensure system security. This one user interface provides enterprise-wide control across the single- or multisite contact center.</p> <p>Cisco PCCE administrators can use a gadget on the Cisco Finesse desktop to quickly and easily manage the contact center application. Access to the contact center through the gadget can be restricted by role to prevent others from accessing the system.</p>

Feature	Benefits
<b>Multitenancy with Departments</b>	<p>The Departments feature gives power to the administrator to segment contact center administration and business/routing logic based on different lines of business (LOBs) within an organization. Departments allow users to assign resources including agents, skill groups, call types, dialed numbers, and precision queues by LOB or department.</p> <p>Along with configuration, scripting access is also segmented when using Internet Script Editor. Finally, using the Cisco Unified Intelligence Center Collections feature, reporting can be segmented to match departments.</p>
<b>System inventory and notification</b>	<p>Taking advantage of the fixed deployment model of PCCE, the system autogenerates a visual representation of a PCCE deployment. It is a dashboard of administrative information including name; IP address; and shortcuts to other administration user interfaces such as Cisco Unified CVP operations, administration, maintenance, and provisioning (OAM&amp;P), etc. It also serves as a level-one dashboard providing visual notifications of errors or warnings of configuration or runtime problems through periodic autoscans, keeping check on system health and reducing total cost of ownership (TCO).</p>
<b>System Capabilities and Benefits</b>	
<b>Open systems</b>	<p>Cisco PCCE software takes full advantage of industry-standard hardware platforms, giving you the benefits of many software functions at a modest hardware cost. The open architecture of the system, which includes an Open Database Connectivity (ODBC)-compliant database, as well as Java, COM, and .NET interfaces for CTI applications, can integrate with existing contact center solutions, preserving investments in traditional systems and providing a platform for future applications.</p>
<b>Distributed fault tolerance</b>	<p>From the network to the desktop, all Cisco PCCE components and external application links provide carrier-class, distributed fault tolerance at both the hardware and software levels, with real-time application failover capabilities. Self-diagnostics and self-healing features allow the system to automatically take advantage of redundant components when required; the system is resilient to hardware component failures, communications network failures, and asynchronous software errors.</p>
<b>Network management</b>	<p>Both enterprise and hosted contact centers require applications that provide management information and a single point of performance monitoring and troubleshooting. As you face the challenges of deploying, upgrading, and managing contact centers with integrated software, you may incur setup and ongoing operational and maintenance costs that affect your ability to provide your end users a cost-effective solution. Cisco PCCE software provides a Simple Network Management Protocol (SNMP) interface for integration into centralized network management systems. It also provides integration into a broader unified communications management infrastructure, bundled with Cisco Unified Communications Manager. It provides new levels of availability and manageability during deployments and upgrades, as well as during normal contact center operations.</p>
<b>Cisco Prime™ Collaboration Contact Center Assurance</b>	<p>Cisco Prime™ management supports Cisco Packaged Contact Center Enterprise, offering monitoring and diagnostics to help reduce costly Cisco PCCE downtime.</p>
<b>Security</b>	<p>Cisco PCCE supports the latest in security and data integrity features and solutions. When deployed, the application servers are hardened to reduce the attack surface and system vulnerability. Secure Sockets Layer (SSL) is available on all web-based applications and Transport Layer Security (TLS) and IP Security (IPsec) support is available for sockets-based communications to secure data in transit across trusted and untrusted networks.</p>
<b>Product Functions</b>	
<b>Routing functions</b>	<p>Precision routing sends the contact to the best available resource, based on information about the caller and the attributes of the agent. By delivering the contact effectively, companies can reduce overall handle time, decrease the need for multiple transfers, and increase customer satisfaction with the experience.</p>
<b>Cisco Pre-Routing function</b>	<p>The Cisco Pre-Routing function makes routing decisions for each call while it is still in the carrier's network, enabling the Cisco platform to effectively segment customers, balance calls across the enterprise, and deliver each contact to the best enterprise resource the first time.</p>
<b>Customer profile routing</b>	<p>Cisco PCCE extends the sources of data available for making contact routing decisions and for populating agent desktop applications. For instance, Cisco PCCE can perform a lookup in your customer database during routing to guide its decisions. You can also use information from CRM applications to match customers with agents and expand the data available to screen pop applications.</p> <p>Wherever an agent is based, the system delivers context-call event and customer-profile data - as a contact arrives - allowing the agent or application to personalize service and help maximize efficiency.</p>
<b>Cisco Unified Customer Voice Portal</b>	<p>PCCE includes Cisco Unified CVP, which operates with IP-based contact centers to provide a call-management and -treatment solution with a self-service IVR option that can use information available to customers on the corporate web server. With support for automatic-speech-recognition (ASR) and text-to-speech (TTS) capabilities, callers can obtain personalized answers to their questions and conduct business in innovative ways without the costs of interacting with a live agent.</p> <p>For example, with Cisco Unified CVP, you can pay a bill, order products and track delivery, locate a dealer, schedule a pickup, change name and address information, make travel arrangements, check payment status, receive notification of unusual activity, or request literature or product information.</p>
<b>Agent request API</b>	<p>The agent request API enables businesses to add voice callback as a feature to their custom-developed applications for the web and for mobile applications. Businesses can present callback as one of the ways or channels their customers can contact them, allowing customers to choose the channel of communication that works best for them.</p>

Feature	Benefits
<b>Reporting</b>	<p>Cisco PCCE provides real-time and historical data necessary for mission-critical contact center reporting across all media types. The solution provides accurate and timely reports on contact center activity, helping managers make informed decisions regarding staffing levels and contact handling procedures.</p> <p>Standard reporting is provided by the Cisco Unified Intelligence Center, which offers numerous report templates intended to meet common reporting needs. With the availability of the underlying data model and schema, you can easily develop custom reports to extend the solution to meet specific reporting needs. Furthermore, Cisco PCCE allows for the export of reporting data to external data warehouse environments for extended storage and advanced analytics.</p> <p>For Cisco PCCE, the Live Data feature provides a new real-time architecture with significant real-time refresh-rate improvements through actionable real-time contact center information. Reports available from Cisco Unified Intelligence Center and reporting gadgets available on the Cisco Finesse desktop take advantage of this next-generation architecture.</p>
<b>Universal queue</b>	<p>Cisco PCCE coordinates an agent's ability to work on multiple tasks from various channels while allowing the agent to be interrupted with high-priority tasks as required. For instance, an agent who is assisting a customer using text chat could handle another chat request at the same time, increasing the agent's productivity. Agents also can be delivered a task of a different channel type from their active task. For example, an agent responding to a customer's email message can be sent a voice call, allowing the agent to handle the real-time voice call and then return to the email message. In this way, Cisco PCCE can optimize your agents' activities, helping ensure the highest level of customer service with the resources available.</p>
<b>Remote-agent support</b>	<p>Remote-agent support extends the Cisco Unified Contact Center environment by providing CTI, contact distribution, and reporting capabilities to remote agents in branch offices or at home, through either a broadband network connection or their home telephone line. Cisco Unified Contact Center provides identical user interfaces and feature functions to agents regardless of location.</p> <p>The Cisco Unified Mobile Agent feature adds the capability to enable agents to choose their destination phone number during login time - and change the number as often as they want - giving the contact center the flexibility to adapt to a fast-moving mobile workforce. With work-at-home programs, agents can be given location flexibility while reducing startup costs on the part of the contact center. An additional benefit of this capability is allowing agents to be on any phone device on any third-party switch infrastructure.</p> <p>By incorporating agents outside the physical location of a contact center, Cisco Unified Contact Center helps companies better use existing and on-demand resources and fully extend CTI functions across the extended enterprise.</p>

Cisco PCCE options are described in Table 3.

**Table 3.** Cisco Packaged Contact Center Enterprise Options

Option	Description
<b>Video Contact Center</b>	<p>Cisco PCCE Video Contact Center provides high-quality video collaboration between customers and agents. Depending on how Video Contact Center is deployed, customers may connect with agents either from within the enterprise network or from mobile devices outside the enterprise. PCCE supports video in queue with IVR treatment, video on hold, and video recording. With Cisco Remote Expert, callers outside the enterprise's network can engage in web-based video chats or expert-assist sessions with agents. Unregistered callers can make calls using standard browsers on PC or Mac computers, or via tablets and smartphones. The Remote Expert Application Server and Media Broker components provide expert-assist functions, including co-browsing and screen sharing, remote control, annotation, content and URL push, and assisted form completion.</p>
<b>Social media customer care</b>	<p>Cisco SocialMiner<sup>®</sup> software provides a social media customer care solution for Cisco Packaged Contact Center Enterprise that enables your company to proactively respond to customers and prospects communicating through public social media networks such as Twitter and Facebook or other compatible public forum or blogging sites. By providing social media monitoring, queuing, and workflow to organize customer posts on social media networks and delivering them to your social media customer care team, your company can respond to customers in real time through the same social network they use to communicate.</p> <p>This innovative capability is enabled by Cisco SocialMiner software, which searches multiple social networks to capture public customer postings - and then organizes, filters, and prioritizes these postings and presents them to your customer care team for response. Your customer service representatives could respond to a customer service problem or reach out to new customers looking for information about your products or services.</p> <p>Cisco SocialMiner software combined with Cisco PCCE can help your company enhance customer service, improve customer loyalty, add new customers, and protect your brand.</p>
<b>Cisco Unified Web Interaction Manager</b>	<p>Cisco Unified Web Interaction Manager can help your contact center agents respond immediately to customer questions, using your website along with text chat or real-time web collaboration. Web collaboration allows contact center agents to chat live with customers through the web and, in a blended collaboration session, the agent and customer can talk live on the phone and review web content simultaneously to address questions quickly and effectively. In addition, with the Cisco Unified Web Interaction Manager web callback feature, customers can request a callback from a contact center when the right agent is available, rather than waiting in a voice or chat queue. Cisco PCCE routes customer requests from your website using the same routing logic used for voice calls. Because it facilitates effective, personalized customer assistance, Cisco Unified Web Interaction Manager is suitable for both sales- and service-oriented contact centers.</p>

Option	Description
<b>Cisco Unified E-Mail Interaction Manager</b>	Cisco Unified E-Mail Interaction Manager is a comprehensive solution for managing large volumes of customer email inquiries submitted to your company mailboxes or website. Based on customizable business rules, Cisco Unified E-Mail Interaction Manager accelerates the response process by automatically directing messages to the right agent or support team, categorizing and prioritizing messages, suggesting relevant response templates, and, if desired, sending automated replies. Quick, accurate turnaround of inquiries helps build stronger customer relationships, added value, and greater efficiency in the contact center.
<b>Cisco Outbound Option</b>	The Cisco Outbound Option, with its combination of outbound dialing modes, complements the powerful inbound call-handling capability of the Cisco PCCE platform. You can build campaigns to use predictive, progressive, or preview dialing, which is integrated with inbound calls and compliant with contact center service levels to offer a powerful blended solution. You can allocate agents to handle only inbound, only outbound, or both inbound and outbound contacts, offering an effective way to increase resource use in a contact center.

## Ordering Information

To place an order, visit the [Cisco Ordering Home Page](#) and refer to Table 4.

**Table 4.** Ordering Information

Product Name	Part Number
<b>Cisco Packaged Contact Center Enterprise Solution</b>	CCE-PAC-BUNDLE

## Upgrades

Cisco Packaged Contact Center Enterprise 11.0 is a major release. Upgrades from prior releases require a Cisco Software Service Subscription (SWSS).

## Cisco Services

Adapt to market changes while increasing productivity, improving competitive advantage, and delivering a rich-media experience across any workspace. The combined strengths of Cisco and our partners provide a portfolio of services that can help you prepare your infrastructure for future changes aligning to long-term business goals. Together we create innovative, network-centric architecture solutions resulting in a scalable and responsive foundation that can help you realize the full value of your IT and communication investment.

For more information about Cisco Packaged Contact Center Services, visit <http://www.cisco.com/go/uccservices>.

## Summary

Cisco Packaged Contact Center Enterprise provides a state-of-the-art contact center solution that allows you to integrate inbound and outbound voice applications with Internet applications, including real-time chat, web collaboration, email messaging, and social media. This integration allows for unified capabilities, helping a single agent support multiple interactions simultaneously, regardless of the communications channel the customer chooses. Because each interaction is unique and may require individualized service, Cisco provides contact center solutions to manage each interaction based on virtually any contact attribute.

## Cisco Capital

### Financing to Help You Achieve Your Objectives

Cisco Capital can help you acquire the technology you need to achieve your objectives and stay competitive. We can help you reduce CapEx. Accelerate your growth. Optimize your investment dollars and ROI. Cisco Capital financing gives you flexibility in acquiring hardware, software, services, and complementary third-party equipment. And there's just one predictable payment. Cisco Capital is available in more than 100 countries. [Learn more.](#)
