

Cisco Unified Intelligence Center 10.5

Product Overview

Cisco® Unified Intelligence Center is a web-based reporting application that provides real-time and historical reporting in an easy-to-use, wizard-based application for Cisco Contact Center products. It allows contact center supervisors and business users to report on the details of every contact across all channels in the contact center from a single interface (Figure 1).

Cisco Unified Intelligence Center allows customers to extend the boundaries of traditional contact center reporting to an information portal where data can be easily integrated and shared throughout the organization.

Features and Benefits

Cisco Unified Intelligence Center is a state-of-the-art, open platform offering a secure 360-degree view of the enterprise with the capability to link down, up, or across to other data from any report. Stock and custom reports can be grouped with other web content to create dynamic dashboards. Permanent web links, or permalinks, also enable one-click access to reports and dashboards in Cisco Unified Intelligence Center, allowing reports to be embedded in other dashboards and simplifying access.

Cisco Unified Intelligence Center report packages can be imported to provide support for multiple Cisco Contact Center products including Cisco Unified Contact Center Enterprise, Packaged Contact Center Enterprise, Unified Contact Center Express, Unified Customer Voice Portal, Unified Web and E-Mail Interaction Manager; and the Cisco SocialMiner® social media customer care solution. In addition, partner report packages can enhance and extend reporting to other products. Using a single reporting platform across contact center products reduces training costs for both end users and report developers.

Cisco Unified Intelligence Center is available in two versions - Standard and Premium. Cisco Unified Intelligence Center Standard is included as part of the Cisco Unified Contact Center Enterprise, Packaged Contact Center Enterprise, and Unified Contact Center Express software kits. Please note that platform software is required. Cisco Unified Intelligence Center Premium, available for Cisco Unified Contact Center Enterprise and Packaged Contact Center Enterprise only, includes advanced features and the capability to create new reporting queries and access other external databases and data sources. Table 1 summarizes the features of Cisco Unified Intelligence Center.

Table 1. Feature Comparison for Cisco Unified Intelligence Center

Feature	Cisco Unified Intelligence Center Standard	Cisco Unified Intelligence Center Premium
Historical reports for Cisco Unified Contact Center Express preinstalled	X	
Cisco Unified Intelligence Center administrative reports	X	X
Download and import Cisco Unified Contact Center Enterprise, Unified Customer Voice Portal, Unified Web and E-Mail Interaction Manager, and outbound reports from Cisco.com and developer.Cisco.com	X	X
Import reports developed by partners or on lab systems	X	X
Dashboards	X	X
Rename columns	X	X
Reorder, hide, and unhide report columns	X	X
Define thresholds (change color, text, and graphics)	X	X
Change report filtering for ad-hoc reporting	X	X
Perform partitioning through collections [*]	X	X
Permalinks	X	X
Create or modify queries to build new reports		X
Configure links between reports		X
Set report refresh rates		X
Add or change computed fields in reports		X
Access third-party data sources for reporting		X

^{*} Not applicable for Cisco Unified Contact Center Express

Cisco Unified Intelligence Center provides real-time and historical reporting in an easy-to-use, wizard-based application. To allow you to customize the way that information is presented, the application provides a dashboard (Figure 1), which is the canvas for grouping multiple objects together, such as charts, gauges, and grids, to provide a comprehensive view of contact center statistics at a glance.

New for Cisco Unified Intelligence Center 10.5 is Live Data failover for Packaged Contact Center Enterprise Live Data gadgets. This feature provides high availability of Live Data in Cisco Finesse[®] gadgets. In Packaged Contact Center Enterprise deployments, the Live Data gadgets will detect the Unified Intelligence Center and Notification service failure from the node it is connected to and will automatically initialize and receive Live Data updates from the other node.

Also introduced in this release are two new Live Data reports for skill groups and precision queues, as well as increased character support for report definition queries for advanced custom report development.

You can develop multiple dashboards to provide a variety of views for any contact center information. End users of these reports (Figure 2) can modify the content through the wizard by choosing the columns to be displayed, specifying the order, applying filter criteria to identify exceptions, formatting values, and renaming columns to suit individual needs. This approach allows report designers to define a report and then allows end users to personalize it on their own, eliminating the need to go back to the designer for small changes.

Figure 2. Cisco Unified Intelligence Center Sample Reports

Another benefit for administrators is the capability to set individual default values for users or groups that define time zones, languages, and other interface preferences. No matter where users are located, when they log in, the defaults assigned to them provide reporting information that is customized for their particular needs.

Cisco Unified Intelligence Center also allows administrators to control access to features, reports, and data by granting privileges only to authorized individual users or groups of users. For example, you can assign each supervisor to a group of agents, skills, and call types that are the most relevant to that person so that each report provides focused, actionable insights into data that is germane to the person's role.

Several features in this product allow you to extend the Cisco Unified Intelligence Center platform beyond traditional contact center reporting to an enterprisewide information portal. You can use data from nontraditional sources to improve business efficiency and effectiveness. For example, you can include publishing data from anywhere in your network to provide real-time information about changing conditions in the contact center or add a countdown widget that marks the time until a new product launch. You also can use HTML posts to include live external webpage content or access internal information portals to include in the dashboard or add a message to your team dashboard with a sticky note.

System Requirements

For information about system requirements for Cisco Unified Contact Center Express, please refer to the Cisco Unified Contact Center Express documentation. For all other implementations of Cisco Unified Intelligence Center, please refer to the bill of materials (BOM) for Cisco Unified Intelligence Center 10.5 at:
