

# Agentic Actions

Turn network chaos into confident, automated resolution

## Benefits

- Detect, prioritize, and resolve every network issue in one place, with instant one-click or autonomous execution
- Cut through alert noise with intelligent thresholds and signal correlation
- Identify root cause instantly with AI-driven analysis and next best actions
- Validate every action with real user impact through before-and-after outcomes
- Operate at machine speed with built-in governance and control

## Product overview

### Resolve network issues faster, from one place

A critical application slows down across multiple sites. Alerts start firing, tickets pile up, and teams scramble across dashboards to isolate the issue. Is it the network? The client? A recent change? Time is lost navigating tools instead of solving the problem.

With Agentic Actions, everything is brought into a single, intelligent workflow. Incidents, alerts, and optimization opportunities are automatically prioritized, correlated, and enriched with AI-driven Root Cause Analysis (RCA) and recommended actions. Teams can resolve issues in one click, automate recurring fixes, or allow agents to act, while continuously validating outcomes.

This is Agentic Actions in action. It transforms fragmented troubleshooting into a streamlined, closed-loop system, reducing Mean Time to Resolution (MTTR), improving user experience, and helping NetOps teams to build and operate worry-free networks at scale with confidence.

## What it does

### Detect, decide, and fix, all in one place

Agentic Actions centralizes network operations into a single, intelligent workflow, bringing together incidents, alerts, and optimizations to accelerate detection, prioritization, and resolution.

Agentic Actions enables you to:

- Detect and prioritize issues instantly with correlated signals across assurance, security, and performance domains
- Pinpoint root cause faster with AI-driven RCA and clear next best actions
- Resolve issues in one click or automate fixes for recurring problems
- Leverage agentic actions to investigate and remediate on your behalf, with human-in-the-loop control
- Reduce alert noise with smart thresholds and intelligent signal correlation
- Track outcomes and validate the impact of every action with before-and-after visibility

Unlike fragmented monitoring tools, Agentic Actions delivers a unified, closed-loop workflow, combining detection, diagnosis, remediation, and validation in one place to reduce MTTR and enable worry-free networks at scale.

### Learn more

#### Start building self-healing networks, with confidence.

See how Agentic Actions helps you cut through alert noise, pinpoint root cause instantly, and automate remediation with confidence. Unify workflows, reduce MTTR, and scale operations without adding headcount.
