

Cisco IP Camera SIP Client Application

Product Overview

The Cisco IP Camera SIP Client Application adds two-way, full-duplex audio to most Cisco Video Surveillance IP Cameras equipped with an external speaker and a microphone.

A voice-over-IP (VoIP) call to the camera can be made from devices using the Session Initiation Protocol (SIP), enabling operators to communicate with people in the camera's vicinity. The Cisco IP Camera SIP Client Application can also be used to broadcast unidirectional announcements from multiple Cisco IP cameras as an alternative to a public address system.

Potential Applications

- **Safety**
 - Person on the street asking for help
 - Monitoring and providing updates to first responders
- **Virtual Patient Observation**
 - Talk to patient, inform of distress
- **Retail**
 - Customer Responsiveness
- **Public Address**
 - Announce to an entire building or a designated section
 - Integrate with Cisco IP Interoperability and Collaboration System (IPICS), an IP-based dispatch and incident response solution

Product Support

Supported cameras may need additional speaker or microphone. Check individual IP camera datasheet for further information. The SIP Client Application is compatible from Firmware v2.0 onwards. For further information, the [SIP User Guide](#) is available in the [Cisco IP Camera Apps Reference Guide](#).

Cisco IP Camera SIP Client Application supports the following Cisco Video Surveillance IP Cameras (listed by part number):

Table 1. Compatible Cisco IP Cameras
