Cisco 860 Series Integrated Services Routers

Product Overview

The Cisco® 860 Series Integrated Services Routers combine Internet access, security, and wireless services onto a single, secure device that is simple to use and manage for small businesses. Cisco 860 Series delivers features, including firewall, IPSec VPNs, and WLANs, at broadband speeds to small offices. Easy deployment and centralized management features enable the Cisco 860 Series to be deployed by service providers in small businesses.

Cisco 860 Series Integrated Services Routers are fixed-configuration routers that provide business solutions for secure voice and data communication to small businesses. The Cisco 860 Series offer secure broadband services over Fast Ethernet and ADSL2/2+ WAN links. 802.11n offers LAN mobility and increased productivity (Figures 1 and 2). Cisco 860 Series provide the performance required for concurrent services, including firewall, and encryption for VPNs; optional 802.11g/n for mobility; and quality of service (QoS) features for multiple applications. In addition, the Cisco Configuration Professional (CCP) is a Web-based configuration tool that simplifies setup and deployment (Figure 3). Centralized management capabilities give network managers visibility and control of the network configurations at the remote site.

Cisco 860 Series Integrated Services Routers offer:

- Concurrent broadband services for small offices, and remote sites
- Secure connectivity with Stateful Inspection Firewall and IP Security (IPSec) VPN support for small offices
- Security features including:
  ◦ Stateful Inspection Firewall
  ◦ IP Security (IPSec) VPNs (Triple Data Encryption Standard [3DES] or Advanced Encryption Standard [AES])
- 4-port 10/100 Fast Ethernet managed switch with VLAN support
- CON/AUX Port for console or external modem
- Secure 802.11g/n access point option based on IEEE802.11n draft 2.0 standard
- Easy setup, deployment, and remote management capabilities through Web-based tools and Cisco IOS® Software

### Applications

Cisco 860 Series routers are designed for small office and remote office deployments. IT managers can centrally manage the remote site to quickly troubleshoot any network issues. Optional integrated secure WLAN connectivity simplifies the number of devices that need to be managed at the remote site.

The Cisco 860 Series can be deployed in managed services. Service providers and value-added resellers can use the series as a platform to offer differentiated services and business-class WLANs for small business customers.

### Summary

Cisco 860 Series Integrated Services Routers combine support for Fast Ethernet or ADSL connections, secure connectivity with Stateful Firewall and VPN, and optional 802.11g/n access point for secure WLANs. With easy setup for nontechnical users and central management capabilities, Cisco 860 Series routers are suitable for deployment in small businesses or remote offices by value-added resellers, IT managers, or service providers.

Cisco Services

Leading-edge technology deserves leading-edge support. Cisco offers a wide range of services programs to accelerate customer success. These innovative services programs are delivered through a unique combination of people, processes, tools, and partners, resulting in high levels of customer satisfaction. Cisco services help you protect your network investment, optimize network operations, and prepare your network for new applications to extend network intelligence and the power of your business.

Cisco SMARTnet® technical support for the Cisco 860 Series is available on a one-time or annual contract basis. Support options range from help-desk assistance to proactive, onsite consultation.

All support contracts include:

- Major Cisco IOS Software updates in protocol, security, bandwidth, and feature improvements
- Full access rights to Cisco.com technical libraries for technical assistance, electronic commerce, and product information
- 24-hour-a-day access to the industry's largest dedicated technical support staff

For more information about Cisco services, refer to Cisco Technical Support Services or Cisco Advanced Services.
