Cisco Network Convergence System 6008
Single-Chassis System

Meet the industry’s first-ever carrier-grade, programmable router - the Cisco® Network Convergence System (NCS) 6000 Series Router. But that’s just the beginning of what it can do. Petabit scale and high performance are other winning features. And the Cisco NCS 6000 Series allows providers to easily virtualize services to improve business agility, simplify operations, and consolidate network devices. The Cisco NCS 6000 Series system also facilitates the build-out of the next-generation core to support elastic capacity at the lowest total cost of ownership (TCO) and to deliver high-bandwidth mobile, video, and cloud services.

The Cisco NCS 6008 – 8-Slot Chassis is a single-chassis system (Figure 1) that provides 16 Tbps of full-duplex network bandwidth through 8 line cards. Each card delivers up to 2 Tbps throughput using a mix of 10-Gbps and 100-Gbps interfaces per card. The Cisco NCS 6008 system also provides modular optics options to meet a wide range of distance requirements. In a multi-chassis configuration, the Cisco NCS 6008 system can be expanded to support up to 256 Tbps of full-duplex forwarding throughput.

Figure 1. Cisco NCS 6008 Single-Chassis System

The market demand for high-capacity data networks is accelerating: Most global communications now occur online. Internet and mobile use continue to expand, and video and interactive multimedia usage is increasing exponentially.

The Cisco NCS 6008 single-chassis system offers many advantages that can help meet usage demands for the foreseeable future:

- The system is powered by the Cisco nPower NPUs, which meet the demands of the next-generation core without compromise.
The Cisco NCS 6008 system (Figure 2) provides an operationally efficient infrastructure. All common components, route processors, switching fabric, fans, and power supplies are fully redundant. In addition, the platform uses power on an as-needed basis, depending on system requirements. Power has been modularized to reduce capital expenditures (CapEx) and provide operationally efficient deployment. For environment efficiency, each line card’s power consumption is adapted to the number of ports used.

Cisco NCS 6000 Series

Running the industry-leading virtualized Cisco IOS® XR Software, the Cisco NCS 6000 Series advances the concept of distributed routing and virtualization. With Cisco virtualized IOS XR Software, the Cisco NCS 6000 Series brings new levels of programmability and virtualization to enhance application service offerings, increase provisioning speed, and optimize network economics.

The Cisco NCS 6000 Series is powered by the Cisco nPower Network Processor Units (NPU), an innovative programmable forwarding application-specific integrated circuit (ASIC). The Cisco nPower X1 is designed to deliver the industry’s first zero packet loss (ZPL) and zero topology loss (ZTL) In-Service Software Upgrade (ISSU) capability.

The Cisco NCS 6000 Series is engineered for environmental efficiency, using an adaptable power consumption model for both the ASIC and complementary metal-oxide semiconductor (CMOS) photonics technology. These technologies give the Cisco NCS 6000 Series one of the lowest carbon footprints in service provider routing.

- The Cisco NCS 6000 Series is a fully distributed system. All packet-forwarding decisions and actions take place on the individual line cards to provide high-speed, flexible forwarding. The control plane is independently managed by the route processors, which communicate with other network elements, then send the feature and forwarding instructions to the line cards.
- The Cisco NCS 6000 Series uses the Cisco IOS XR operating system, well known for its use in the highly successful Cisco Carrier Routing System (CRS) and Cisco ASR 9000 Series Aggregation Services Routers. Cisco IOS XR Software is the only fully modular, fully distributed internetworking operating system that uses control plane distribution to allow scaling from a single-chassis system to a large multichassis system. The Cisco IOS XR operating system is purpose-built for distributed systems. In the Cisco NCS 6000 Series, it is further extended by running in the virtual Cisco IOS-XR Software environment. This modularity provides the path to nonstop operations during software image upgrades or module changes.
- Integrated technology includes IP and Multiprotocol Label Switching (MPLS) routing, network virtualization with secure domain routers (SDRs), external control plane, fabric multicast replication, fabric quality of service (QoS), Cisco NetFlow Accounting, and a services implementation infrastructure to provide an outstanding quality of experience (QoE) at the lowest possible TCO.
- Optical extensions are supported to improve packet-data integration, by enhancing power, footprint and future growth.
Cisco NCS 6008 Line Cards

With the rapid growth of bandwidth in service provider networks, solutions must be both flexible and cost efficient. The Cisco NCS 6008 system delivers one of the highest throughputs in the industry, while allowing for natural evolution of existing network architectures. To help achieve these performance objectives, Cisco NCS 6008 line cards can be deployed in the following ways, based on the capabilities required:

- Multiservice (MS): Supports core and peering applications requiring high-scale IPv4/IPv6/MPLS forwarding and queuing capabilities
- Label switch routing (LSR): Supports MPLS switching applications with limited IPv4/IPv6 capabilities

For more information please refer to the Cisco NCS 6008 line card data sheets.

| Multiprotocol Label Switching (MPLS) | • MPLS Label Distribution Protocol (LDP)  
• Resource Reservation Protocol (RSVP)  
• DiffServ Aware Traffic Engineering (TE)  
• MPLS Traffic Engineering control plane (RFCs 2702 and 2430)  
• Segment Routing  
• Route Policy Language (RPL)  
• MPLS Traffic Engineering control plane  
• Management:  
  ◦ Simple Network Management Protocol (SNMP)  
  ◦ Programmatic interfaces (XML)  
  ◦ Model Driven Telemetry  
  ◦ Netconf/Yang  
| Security                     | • Message Digest Algorithm (MD5)  
• IP Security (IPsec) Protocol  
• Secure Shell Protocol Version 2 (SSHv2)  
• Secure FTP (SFTP)  
• Secure Sockets Layer (SSL)  
| Ethernet                     | • 100 Gigabit Ethernet IEEE 802.3  
• 40 Gigabit Ethernet IEEE 802.3  
• 10 Gigabit Ethernet IEEE 802.3  
• Support for short- and long-reach IEEE standards  
| Components                   | Each Cisco NCS 6008 line card chassis includes:  
  ◦ Standalone chassis (no rack required)  
  ◦ 2 route processors  
  ◦ 6 fabric cards  
  ◦ 8 line card slots  
  ◦ 2 fan trays  
  ◦ Air inlet filter  
  ◦ 6 power shelves (DC or AC)  
| Fabric Cards                 | • 6 Fabric cards support 5+1 redundancy  
• System can sustain more than one fabric card failure  
• Universal Fabric card (2T & 1T) OR Single-chassis Fabric Card (1T)  
| Line cards                   | 100-G line cards  
  ◦ 20 x 100 Gigabit Ethernet -multiservice cards with combo optics (CPAK & QSFP)  
  ◦ 20 x 100 Gigabit Ethernet LSR cards with combo optics (CPAK & QSFP)  
  ◦ 10 x 100 Gigabit Ethernet -multiservice cards with CPAK optics  
  ◦ 10 x 100 Gigabit Ethernet LSR cards with CPAK optics  
| Connectivity                 | 100 and 10 Gigabit Ethernet on 100-Gbps line cards using breakout or patch panel solutions  
| Features and functions       | IP features:  
  ◦ IPv4 unicast services  
  ◦ IPv6 unicast services  
  ◦ IPv4/IPv6 equal-cost multipathing (ECMP)  
  ◦ IPv4/IPv6 load balancing)  
• Forwarding features:  
  ◦ Access control lists (ACLs)  
  ◦ QoS and class of service (CoS) using modular QoS command-line interface (CLI; MQC)  
| IPv4 multicast features:     | • Multicast reverse path forwarding (RPF)  
• Multicast nonstop forwarding (NSF)  
• Multicast forwarding information base (MFIIB)  
| MPLS features:               | • MPLS forwarding  
• MPLS load balancing  
• User network interface (UNI)  
• Link management protocol (LMP)

**System capacity**

- 4 TBps per line card capability (2 TBps per slot ingress and 2 TBps per slot egress) for a total switching capacity of 32 TBps in a Single Chassis configuration
- Up to 1Pbps total switching capacity in a multi-chassis configuration

**Reliability and availability**

- System redundancy:  
  - Power redundancy 1:1 or 1:N  
  - Fan tray redundancy 1:1  
  - Route processor redundancy 1:1  
  - Fabric card redundancy 1:6  
- Software features:  
  - NSF using graceful restart for IS-IS, OSPF, BGP, LDP, and RSVP  
  - Line-card online insertion and removal (OIR) support  
  - Fabric card OIR support  
  - Out of resource management  
  - Virtual machine redundancy  
  - MPLS Fast Reroute (FRR)  
  - Hot Standby Router Protocol (HSRP) and Virtual Router Redundancy Protocol (VRRP)

|                                                                      | - Linkdown  
|                                                                      | - ColdstartWarmstart |

**Network management**

- Enhanced CLI  
- XML interface  
- Simple Network Management Protocol (SNMP) and MIB support  
- Cisco Prime™ Network  
- Netconf/Yang  
- Model Driven Telemetry

**Programmatic interfaces**

- XML schema support
### Feature Description

#### Physical dimensions
- **Chassis height:** 84 in. (213.36 cm)
- **Chassis width:** 23.6 in. (59.94 cm)
- **Chassis depth:** (inclusive of external cosmetic doors) 42 in. (106.68 cm)

#### Power
- Support for both DC and AC power modules¹ (AC ranges: 200-240V; 50-60 Hz; 16A maximum)
- Worldwideranging DC (-40 to -72V; 50A nominal, and 60A maximum)

#### Environmental conditions
- **Storage temperature:** -40 to 158°F (-40 to 70°C)
- **Operating temperature:**
  - Normal: 41 to 104°F (5 to 40°C)
  - Short term*: 23 to 122°F (-5 to 50°C) (see note)
- **Relative humidity:**
  - Normal: 5 to 85%
  - Short-term*: 5 to 90% but not to exceed 0.024 kg water per kg of dry air

*Short-term refers to a period of not more than 96 consecutive hours and a total of not more than 15 days in 1 year. (This refers to a total of 360 hours in any given year, but no more than 15 occurrences during that 1-year period.)

### Approvals and Compliance

Table 2 lists compliance and agency approvals for both models of the Cisco NCS 6008 single-chassis system.
