

Cisco MV44X Dual-Imager

Introducing the MV44X Dual Imager, the latest addition to the Cisco® smart cameras portfolio. Designed for organizations scaling their physical security, the MV44X simplifies complex deployments while providing comprehensive, bi-directional coverage from a single streamlined device.

Expanding physical security in your organization has never been simpler

For IT teams

Extend network protection to cameras

Integrate smart cameras into your existing infrastructure to gain fuller visibility and proactively protect every endpoint on your network.

Minimize downtime with remote troubleshooting

Quickly identify and resolve camera issues remotely via the Meraki® dashboard, reducing downtime, avoiding costly site visits, and keeping your infrastructure fully operational.

Scale cameras without added complexity

As your camera deployment grows, automatic firmware updates help ensure that your cameras stay healthy, allowing IT to scale without manual maintenance.

For physical security teams

Simplify deployment. Maximize visibility.

Two cameras built into a single device means faster, broader coverage across your environment, reducing vulnerable areas and helping ensure that no corner of your space goes undetected.

Accelerate incident investigation

Quickly surface the footage that matters most with motion search, enabling your physical security team to locate incidents faster, respond decisively, and ensure your people, places, and assets stay protected.

Streamline your video workflow

Vision Portal brings dedicated video viewing, incident investigation, and footage exporting into one place – accessed directly through the Meraki dashboard so your security team can focus on what matters most.

Unified physical security, powered by your Cisco network

Key industries and deployments

Retail

Monitor your highest-risk areas (cash registers and store entrances) with a single camera deployment.

Education

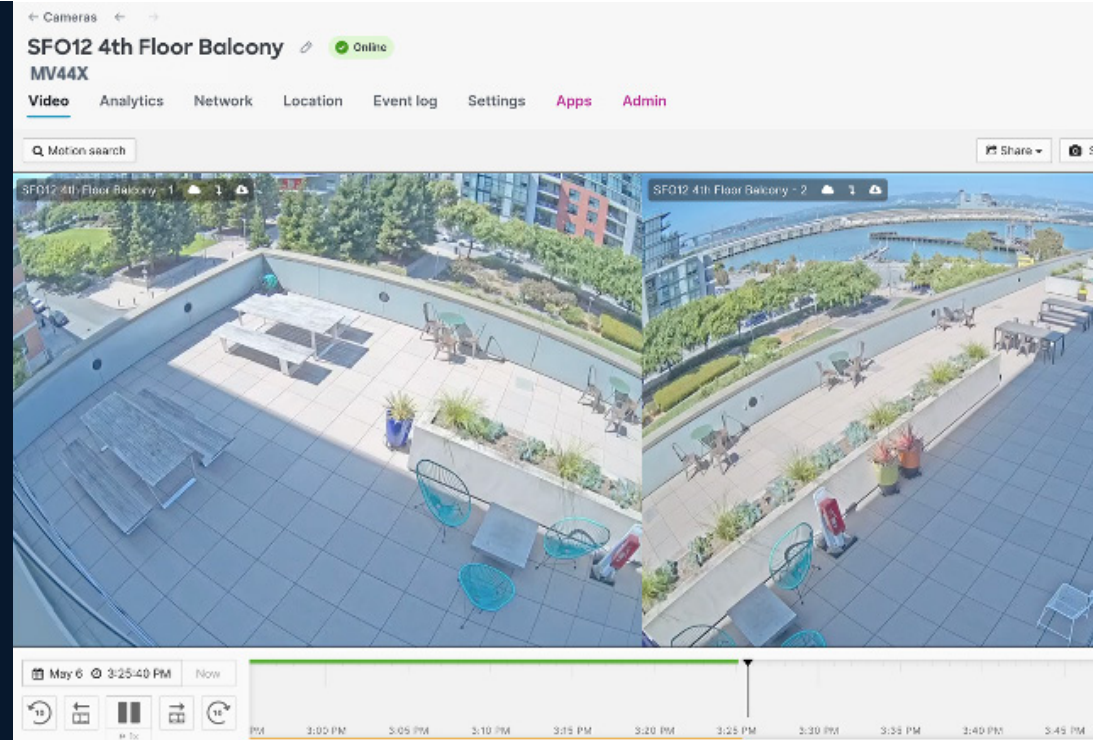

Oversee school entrances and surrounding hallways simultaneously, keeping students and staff safe with a quicker deployment.

Manufacturing

Cover both the warehouse floor and critical infrastructure (i.e., access points) without doubling your camera infrastructure.

Hospitality

Watch over lobby check-in areas and main entrances through a single camera, delivering a safe and seamless guest experience.
