Cisco Secure DDoS Protection

Distributed denial-of-service (DDoS) attacks continue to become more frequent, more powerful, and more damaging. With the growing online availability of attack tools, the variants of possible attacks are now more numerous than ever.

Cisco Secure DDoS Protection solutions defend organizations against today's most sophisticated DDoS attacks using advanced behavioral-based and machine learning algorithms to rapidly detect and mitigate both network-layer (Layers 3 and 4) and application-layer (Layer 7) attacks. Cisco Secure DDoS Protection solutions defend against encrypted SSL-based DDoS attacks without adding latency and use automatic, adaptive real-time protection to defend against zero-day attacks. Multiple deployment options, including cloud-based, customer premises, and hybrid deployment, offer solutions for every customer.

Key benefits

Zero-day DDoS protection

Patented adaptive, behavioral-based algorithms, continuously refined over the past decade, block sophisticated never-before-seen (zero-day) attacks with the lowest false positive rate in the industry

Highest availability under attack

Intelligently distinguishes legitimate from malicious traffic, enabling advanced SLAs and maximizing service availability

Increased data center efficiency

Comprehensive DDoS protection enables predictable engineering for network and application resources by eliminating anomalous flows that consume network resources and impact application availability
Flexible deployment options
On-premises DDoS protection

DDoS appliance

Key

→ Legitimate & attack traffic

→ Cleaned traffic
- Low-latency, real-time mitigation
- Dedicated on-premises appliance
- Full visibility and control

Always-on cloud DDoS protection

Cloud DDoS

- Traffic always routed through scrubbing centers
- Real-time DDoS detection and mitigation by scrubbing centers

On-demand cloud DDoS protection

NetFlow

Cloud DDoS

- Traffic diverted only in case of large-volume attack
- Detection based on NetFlow and/or other telemetry
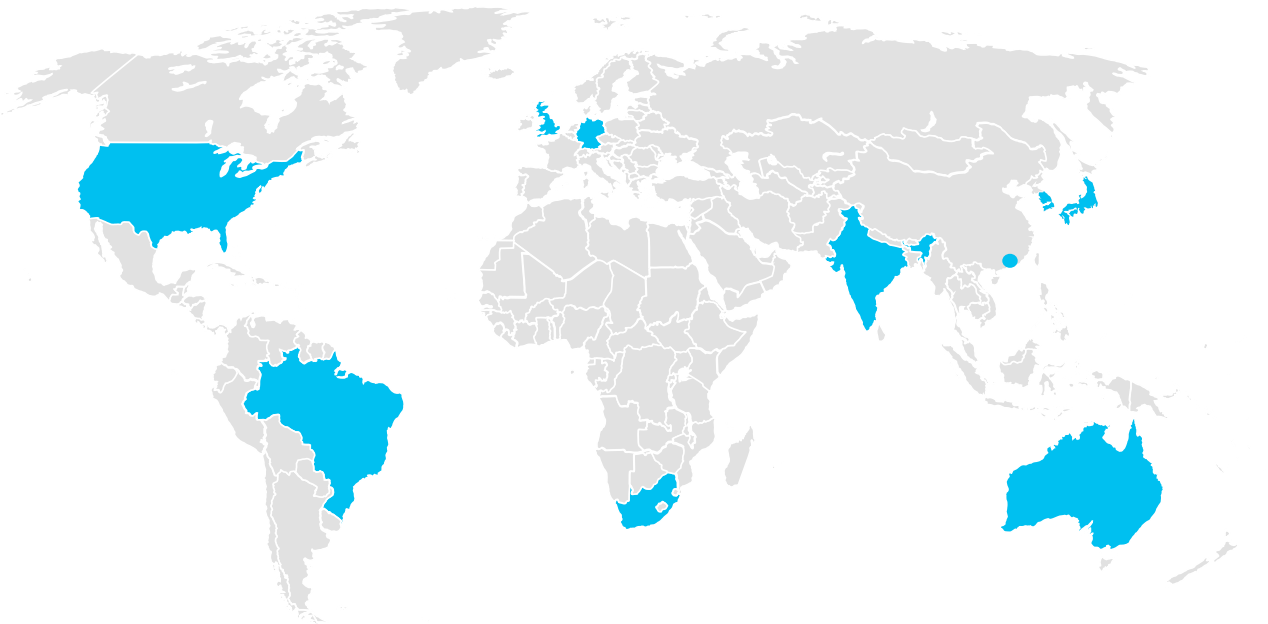

Hybrid DDoS protection (on-premises + cloud)

DefenseFlow

Cloud DDoS
- Combines on-premises mitigation with cloud capacity
- Traffic diverted to cloud before pipe saturation

CISCO

Global scrubbing centers

Massive capacity. Scalable global DDoS protection.

Our global network of scrubbing centers provides high availability and resilience.

USA – Brazil – UK – Germany – Netherlands – Israel – South Africa – India – Australia – Hong Kong – South Korea – Japan
France - Taiwan - Canada - New Zealand - Dubai

Granular SLAs

- Using the DDoS service from your ISP? Many services provide only a "best-effort" SLA against an attack.

- Cisco Secure DDoS Protection service provides industry-leading SLAs for time to mitigate, time to detect, time to alert, time to divert, consistency of mitigation, and service availability.
