\*The Quantity Adjustment Rule determines how subscription quantities are adjusted during the Auto-Renewal process for the migration product.

The rule offers several adjustment methods:

- Same as Current: Retains the current subscription quantity.
- Multiply: Multiplies the subscription quantity by a specified value.
- Divide: Divides the subscription quantity by a specified value.
- Add: Adds a specified value to the subscription quantity.
- Exact Value: Sets a fixed, predefined quantity.

\*\*The Adjustment Value is the numeric input used with the Quantity Adjustment Rule to determine how subscription quantities are modified when Auto Renewal is Enabled.

\*\*\*The Auto Renewal indicator shows if Auto Renewal is enabled for the EOL product. However, Auto Renewal will only occur if the customer opted for it during the initial purchase and no manual intervention is required for provisioning. Without this prior selection, the product will not renew automatically, regardless of the Auto Renewal status.
