

# Cisco Stealthwatch Administration Instructor-Led Training

## Course overview

Once the Stealthwatch System is installed, customers set the initial configuration and complete the basic setup requirements that allow Cisco Stealthwatch Enterprise to begin monitoring flow and network behavior.

The Stealthwatch for System Administrators (SSA) two-day course focuses on a framework to follow for completing the initial configuration tasks required to get Stealthwatch up and running. These tasks include, but are not limited to, creating host groups and classifying services and applications found in the network. These critical initial configuration steps allow the Stealthwatch System to begin monitoring flows and network behavior and to provide customers with data they can use to determine next steps, such as what policies (tuning) need to be put in place for managing the amount of data presented.

## Course agenda

### Day One

- Welcome (60 minutes)
- Why Stealthwatch? (30 minutes)
- The Many User Inter"Faces" of Stealthwatch (15 minutes)
