

Cisco User Protection Suite

Frustrate attackers, not users

According to Talos Threat Intelligence Incident Response data, 80% of breaches are initiated from targeting users. From there, attackers move laterally across the network, escalating privileges, and gain access to an organization's most sensitive resources.

Cisco's User Protection Suite puts users at the center of your security strategy. Protect all identities, devices, and access to applications for your remote and hybrid workforce to help your organization achieve your zero trust goals for the workplace.

Rather than rely on a complex patchwork of security solutions, Cisco User Protection Suite reduces the complexity, and improves user experience, with a consolidated, end-to-end approach to help your organization implement zero trust with zero friction.

Zero Trust for Users:
User Protection Suite Essentials

Suite Component	Capabilities	
Secure Access Essentials: <ul style="list-style-type: none">Secure Internet AccessSecure Private Access	Secure Internet Access: <ul style="list-style-type: none">Secure Web GatewayDNS security Secure Private Access <ul style="list-style-type: none">Integrated Zero Trust Network Access and VPNaaS	Additional capabilities include: <ul style="list-style-type: none">Digital experience monitoringCloud access security broker (CASB)Firewall-as-a-Service(FWaaS) Layer 3 and Layer 4Remote browser isolation for risky trafficSecure Malware Analytics
Duo Advantage	Advanced identity security solution including: <ul style="list-style-type: none">Identity IntelligenceMulti-factor authentication (MFA)Passwordless, phishing-resistant authenticationSingle sign-on (SSO)Risk-based authenticationPassportDevice trust and posture	
Email Threat Defense	Cloud email protection that can be deployed in minutes to provide: <ul style="list-style-type: none">Visibility into inbound, outbound, and internal messagesAdditional layer of protection on top of a gatewayAdvanced AI threat detection for accurate threat classificationProtection against advanced email threats like Business Email Compromise and Account TakeoverRapid remediation and integration in Cisco XDR	

Meet the challenge
of hybrid work

Better Efficacy

Secure users with layered protection and integrated products that work better together to defend against the evolving threat landscape.

Better Experiences

Enable the hybrid workforce by ensuring a seamless and secure experience, anywhere.

Better Economics

Ease operational burdens and support your organization on a vendor consolidation journey

Zero Trust for the Workplace:

User Protection Suite Advantage includes User Protection Suite Essentials, plus:

Suite Component	Capabilities
Secure Access Advantage: <ul style="list-style-type: none">Secure Internet AccessSecure Private Access	Includes Secure Access Essentials (Secure Internet Access and Secure Private Access), plus: <ul style="list-style-type: none">Firewall-as-a-Service (FWaaS) Layer 7Advanced remote browser isolation (RBI)Data loss prevention (DLP), including generative AI applications
ISE Premier	ISE Premier <ul style="list-style-type: none">(2 license per user) Protection the network with authentication, authorization, and accountingProfile and posture management for devices and users accessing the networkUtilize Secure Group Tags to make access policies across ISE and Secure AccessLimit network access policies for IoT devices across industries, including office (cameras, printers, thermometers, TV), hospitals (MRI machines, heart monitors), manufacturing (smart machines), and more
Secure Endpoint Advantage (2 endpoints per user)	Endpoint Threat Detection & Response includes: <ul style="list-style-type: none">Anti-virus and defense against malwareIntegrated Secure Malware Analytics to block threats identified across Cisco product ecosystemOrbital Advanced Search with malware analysis to simplify security investigationsRisk-based endpoint security with detailed vulnerability scoring insightsIntegration with Cisco XDR for unified incident management view

Bring together proactive and responsive security with the User and Breach Protection Combination Suite:

Breach Protection Suite Essentials:

- XDR Essentials

Breach Protection Suite Advantage:

- XDR Advantage
- Secure Endpoint Premier
- Secure Network Analytics
