Cisco Unified Edge with WaitTime for Crowd Diagnostics

intel. ıllıllı CISCO

Benefits

- Reduce total cost of ownership with a single 3RU platform combining compute, networking, and security

- Simplify edge operations with centralized lifecycle and infrastructure management using Cisco Intersight®

- Gain real-time customer insights by running WaitTime analytics directly at the edge

- Eliminate edge sprawl by consolidating multiple appliances into Cisco Unified Edge

- Scale and manage edge AI workloads efficiently with Intel® Xeon® 6 SoC performance

Simplify edge infrastructure and operations

Cisco Unified Edge platform with WaitTime delivers real-time customer insights on a **single, integrated 3RU edge platform** that combines compute, networking, and security. Designed to replace multiple standalone devices, Cisco Unified Edge reduces infrastructure complexity, space, and power requirements, thus, lowering total cost of ownership from day one.

The WaitTime application runs locally on Cisco Unified Edge, powered by **Intel® Xeon® 6 SoCs**, enabling high-performance AI video

analytics where data is generated. This edge-first approach minimizes latency, reduces cloud dependence, and improves data privacy.

Cisco Intersight provides centralized, cloud-based management across distributed edge locations, enabling consistent provisioning, monitoring, updates, and lifecycle management. Together, Cisco, WaitTime, and Intel deliver a secure, scalable edge solution that simplifies operations while transforming video into actionable, real-time insights.

Centralize edge AI, security, and management

Cisco Unified Edge Analytics with WaitTime enables organizations to:

- Run AI-powered WaitTime video analytics on local edge compute
- Consolidate compute, networking, and security into a single 3RU Cisco Unified Edge system
- Manage distributed edge infrastructure through Cisco Intersight for consistent operations
- Reduce hardware footprint, power, and operational overhead across locations
- Scale edge AI workloads with Intel Xeon 6 SoC–based performance and efficiency

Why it's different:

Unlike fragmented edge deployments that require multiple devices and manual management, Cisco Unified Edge delivers an **integrated infrastructure platform**, while Cisco Intersight provides **centralized visibility and lifecycle management**. Combined with WaitTime analytics and Intel Xeon 6 processing, this solution lowers TCO, accelerates deployment, and simplifies operations at scale.
