

Cisco SAN Insights Discovery

Modern SAN Fabric Health Assessment at your fingertips

Cisco® SAN Insights Discovery identifies SAN fabric health and facilitates a view into device performance while also providing recommendations for improvement.

Overview

Most company's SAN fabrics have been operating for years without issues. Yet, how can organizations be confident that potential issues are not lurking right around the corner? Are the end-of-life dates on those devices known and planned for accordingly? Cisco SAN Insights Discovery can help identify issues before they escalate and can place organizations comfortably ahead of the refresh curve.

Cisco SAN Insights Discovery provides the visibility necessary to assess current deployments and inventory. The proactive tool also offers a sneak peek into port performance, provides a view of data at both fabric and switch levels and identifies End-Of-Life (EOL) and End-Of-Service (EOS) notifications for all SAN switches.

The contemporary design and architecture and user-friendly interface brings dull data to life with an easy-to-navigate user experience.

Benefits

Cisco SAN Insights Discovery:

- Provides a modern intuitive reporting view that allows customers access to all of their SAN fabric health data
- Simplifies the health-checking process and delivers the data necessary for customers to understand their current landscape while planning for future needs
- Enables a holistic view at the fabric and switch level, as well as a view into the current deployment
- Allows organizations to get ahead of the refresh curve by providing EOL and EOS data along with inventory, performance, and environmental data all in one easy to navigate interface
- Provides a secure, cloud-hosted portal with a view into your data regardless of your current location

Figure 1. Cisco SAN Insights Discovery uses a lightweight collector to securely gather data to be leveraged in the reporting portal

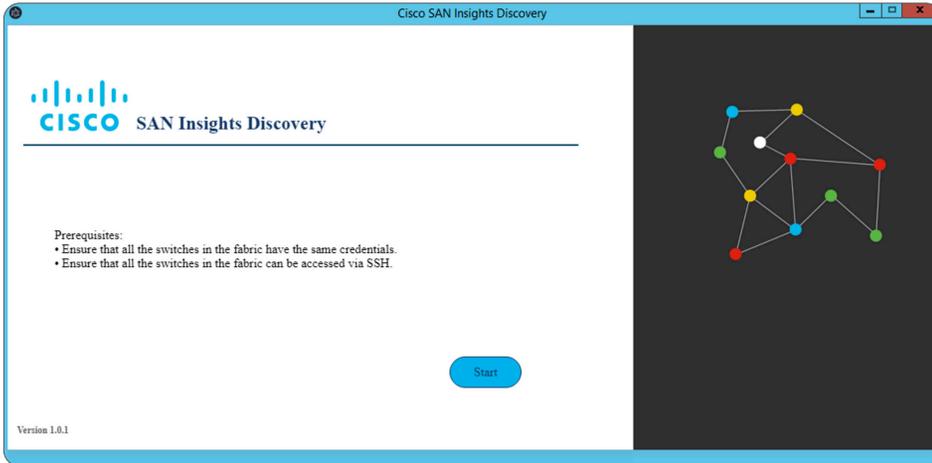

Figure 2. Cisco SAN Insights Discovery, a modern view into the health of your SAN fabrics, is cloud-hosted for maximum flexibility and assessment wherever you need it

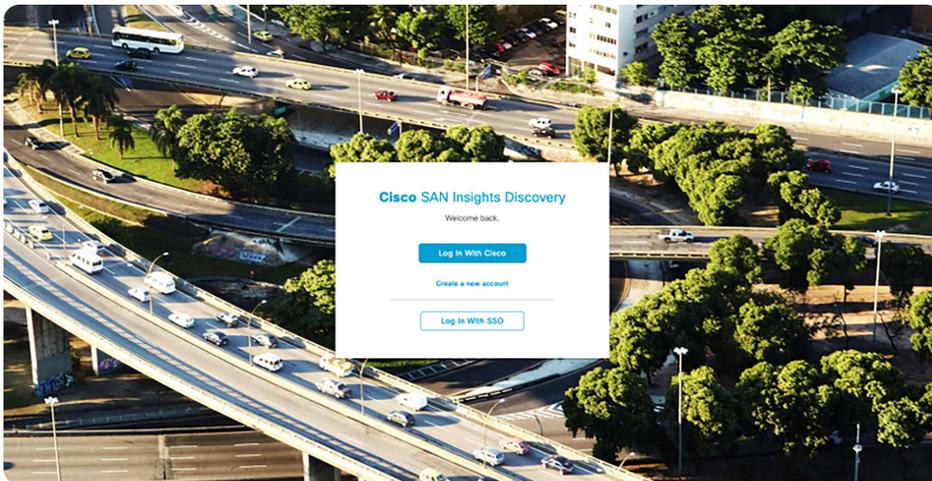

Figure 3. Cisco SAN Insights Discovery shows all reports that have been uploaded into the portal complete with time stamps, health, and general overview

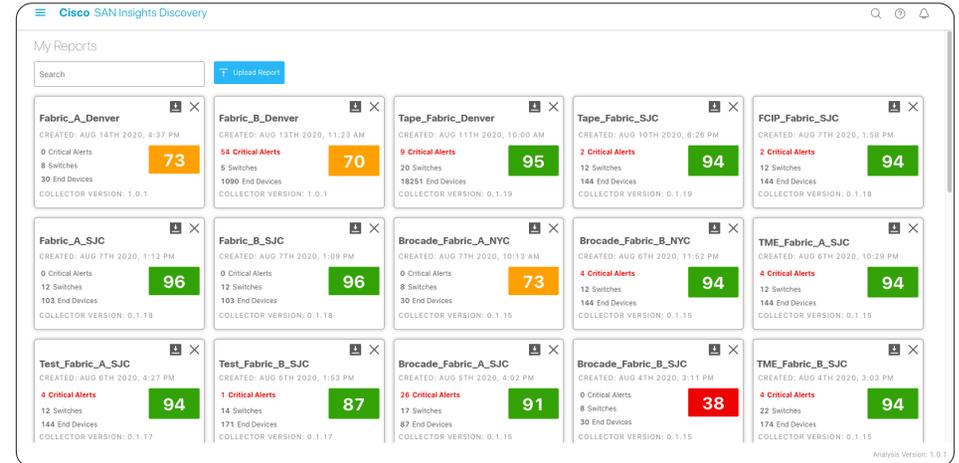

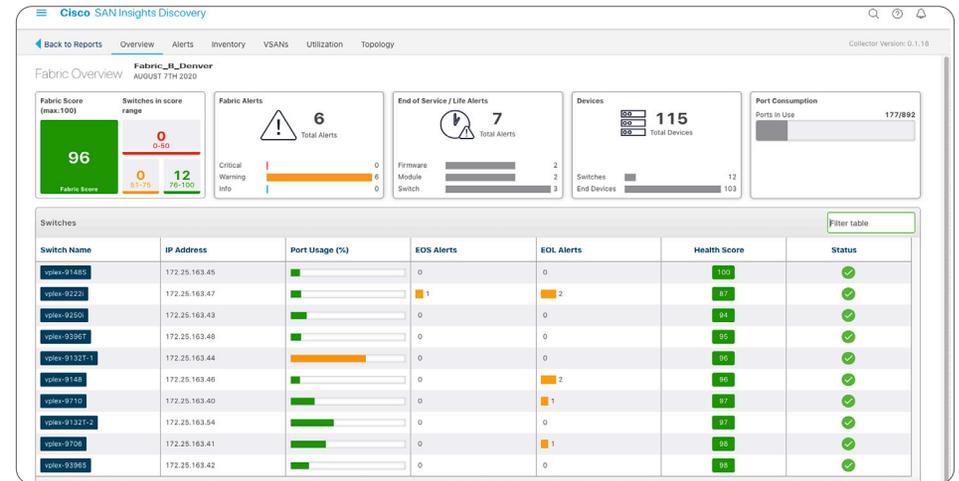

Figure 4. Cisco SAN Insights Discovery provides a comprehensive report of the current fabric and switch health, inventory, performance, EOL/EOS, and much more, in an easy-to-navigate user experience
