

Cisco 2006 Wireless LAN Controllers

Product Overview

The Cisco® 2006 Wireless LAN Controller supports up to six lightweight access points and provides systemwide wireless LAN functions for small and medium-sized enterprise environments and branch offices. By automating WLAN configuration and management functions, network managers have the control, security, redundancy, and reliability needed to cost-effectively scale and manage their wireless networks as easily as they scale and manage their traditional wired networks.

The Cisco 2006 Wireless LAN Controller (Figure 1) works in conjunction with Cisco Aironet® lightweight access points, the Cisco Wireless Control System (WCS), and the Cisco Wireless Location Appliance to support business-critical wireless data, voice, and video applications. It provides real-time communication between lightweight access points and other wireless LAN controllers to deliver centralized security policies, wireless intrusion prevention system (IPS) capabilities, award-winning RF management, quality of service (QoS), and mobility.
