

Cisco AI Assistant

Benefits

- **Speed up troubleshooting** with instant step-by-step guidance and documentation summaries.
- **Get real-time insights** on network health and user activity.
- **Automate routine tasks with Cisco Workflows** and AI Assistant integrations, allowing for automatic execution on pre-trained network actions.

Enable intelligent network operations with built-in AI

The Cisco AI Assistant:

- Delivers real-time, context-aware insights and recommendations directly within the Meraki dashboard, leveraging the Cisco Deep Network Model for unparalleled accuracy. Uses natural language, allowing IT teams to troubleshoot, configure, and monitor networks with simple prompts – no complex commands required.
- Automates routine tasks: saving time and reducing the risk of manual errors with seamless integration into daily operations.
- Is supported by Cisco's global best practices and the latest knowledge, ensuring your network benefits from the industry's most advanced expertise.
- Is built with Cisco's trusted security and data privacy standards, giving you confidence and peace of mind at every step.

Network management, revolutionized with AI

Imagine resolving network issues before users even notice, or making configuration changes with just a simple prompt. Cisco AI Assistant is an intelligent, conversational tool built directly into the Meraki® dashboard. It empowers your IT teams to expedite routine tasks, gain real-time network insights, and optimize network performance – all through natural language prompts.

By harnessing the Cisco Deep Network Model and Cisco's global expertise, the AI Assistant streamlines daily workflows, accelerates troubleshooting, and helps organizations operate with greater confidence and efficiency. With the Cisco AI Assistant, your network management becomes faster, simpler, and smarter—so you can focus on what matters most.
