

Stack Automation by Quali

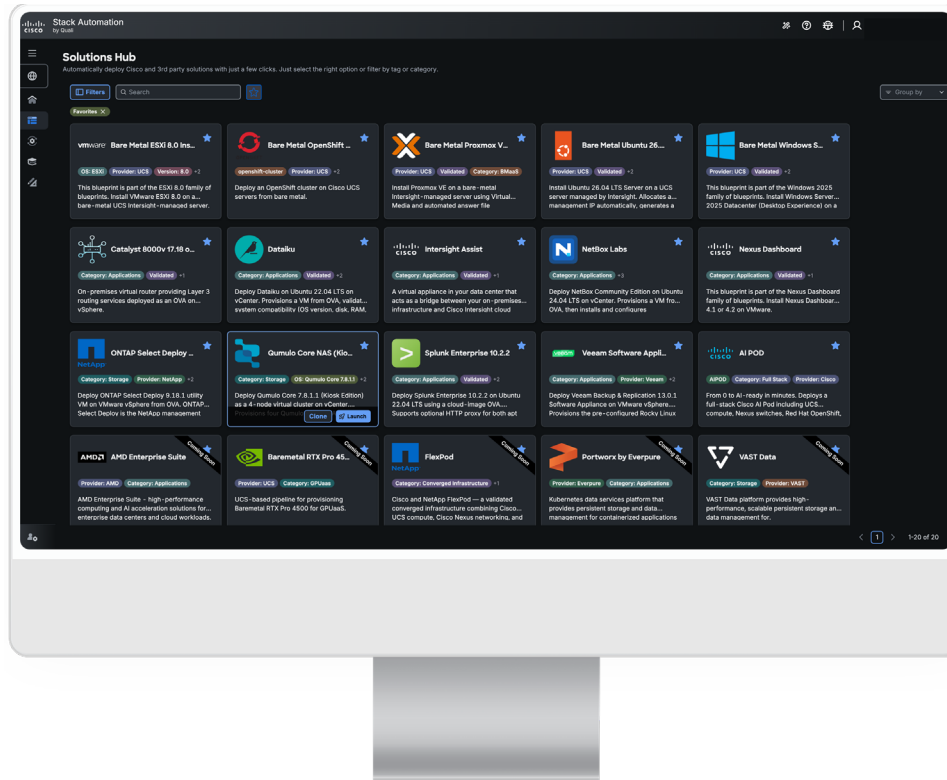

Figure 1. Reduce deployment time from weeks to hours using the Solutions Hub catalogue of software and full-stack solutions from Cisco and third parties

Benefits

- Accelerate time-to-value:** Compress deployment cycles from weeks to hours with fully automated, “rack-to-app” workflows.
- Ensure operational reliability:** Get help in eliminating human error and configuration drift by embedding validation by Cisco and third-party experts into every blueprint.
- Drive enterprise flexibility:** Tailor validated blueprints or build custom configurations using agentic intelligence to meet unique business needs.
- Scale hybrid and AI initiatives:** Deploy consistent, secure infrastructure across on-premises data centers and cloud environments from a single, unified platform.

Accelerate your path to AI-ready infrastructure

Your team is ready to launch a new, high-performance AI initiative. But before you can begin, you face weeks of manual labor: racking servers, configuring network switches, manually installing hypervisors, and troubleshooting software compatibility. Your engineers are acting as system integrators rather than innovators, and your project is already behind schedule.

What if you could skip the manual guesswork? Using Stack Automation by Quali co-developed with Cisco, you can model your entire full-stack solution in a centralized hub, generate a validated bill of materials, and automatically deploy “rack-to-app” infrastructure in hours. By replacing manual assembly with an intelligent, automated platform, you ensure your configurations are secure, validated, and ready for production from the moment they are powered on. This is Stack Automation in action, freeing your team to focus on the innovation that drives your business forward.

Master the day 0-1 infrastructure workflow

Stack Automation streamlines day 0-1 operations through a centralized interface, the Solutions Hub. It enables you to plan, model, and automatically deploy secure solutions—from Cisco® and third-party software to full-stack solutions and ISV applications—with the confidence of Cisco Validated Designs.

Stack Automation enables you to:

- **Perform day-0 planning:** Model solutions, visualize components, and generate Bills Of Materials (BOMs) before ordering.
- **Execute rapid day-1 delivery:** Quickly deploy validated Cisco and third-party software-only (such as OpenShift or Cisco Nexus® Dashboard) and pre-packaged, full-stack solutions (such as Cisco AI PODs).
- **Adopt a dual-path customization framework:** Choose between ready-to-use blueprints validated by Cisco for speed, or build custom solutions from scratch using existing automation assets and agentic intelligence.

Start deploying at cloud speed

Is your current deployment process holding you back? Automate production-ready workflows at cloud speed with Stack Automation from Quali. For additional information, visit [schedule a personalized demo](#), or contact your Cisco representative.

Many of the products and features described herein remain in varying stages of development and will be offered on a when-and-if-available basis. The delivery timeline of these products and features is subject to change at the sole discretion of Cisco, and Cisco will have no liability for delay in the delivery or failure to deliver any of the products or features set forth herein.
