

# Cisco Umbrella DNS Security Plan, Design, and Implement Services

Expert help getting cloud-based security right the first time

## Cisco Umbrella delivers as your first line of defense

In the past, desktops, business applications, and critical infrastructure were all located behind the firewall. But today's mobile devices and software as-a-service (SaaS) apps mean more and more happens off the network. Risky cyberthreats are on the rise, you have more remote users, and trying to chase security alerts from disparate tools puts strain on your resources. You need one solution that can extend protection to sites, devices, remote users, and distributed locations anywhere. Cisco Umbrella® DNS Security is the most effective way to improve your security stack. DNS is a great place to see and control interactions with the Internet. When you add Cisco Talos® insight regarding the latest threats, Umbrella provides a solution capable of identifying and stopping many threats in their infancy. Now that you have decided on your solution, how do you accelerate deploying it to meet your unique business goals?

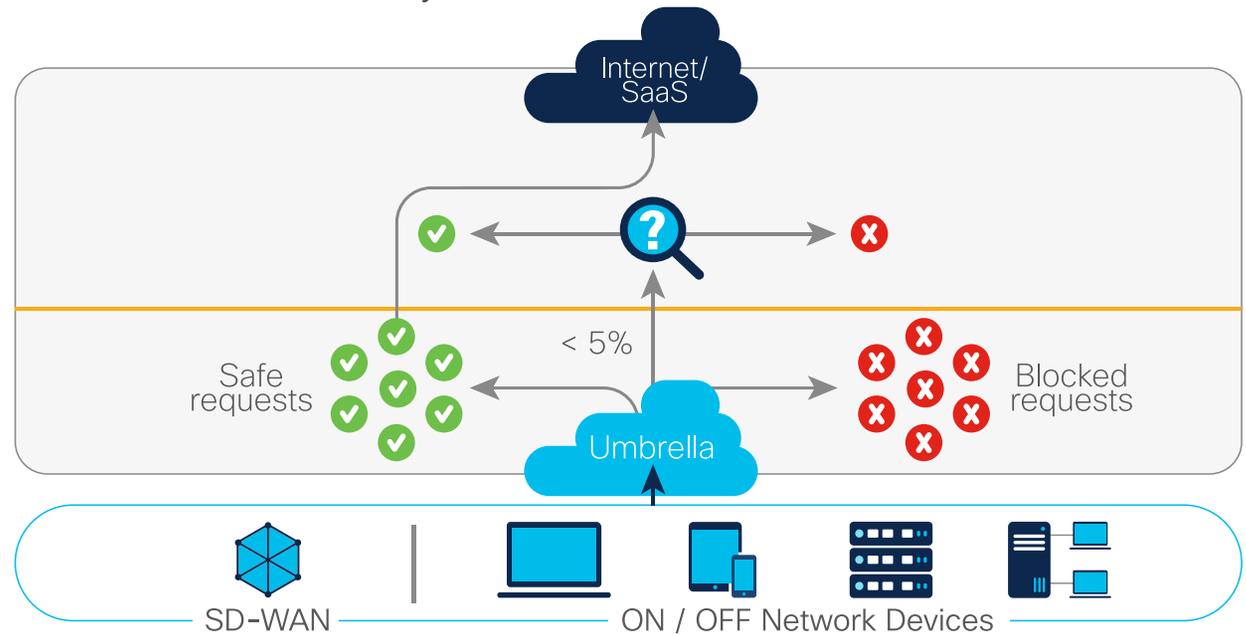

## Benefits

- Speed time to value with a cloud security design aligned to your business needs
- Bridge the skills gap with specialized security talent
- Increase performance, security, and reliability with our expertise
- Reduce risk by leveraging Cisco® proven best practices, state-of-the-art tools, and post-implementation support
- Prepare your team with knowledge transfer from Cisco Security experts

Our service addresses common risks to a successful implementation, such as:

- Lack of product and project expertise
- Limited staff resources
- Time constraints
- Cost overruns due to lack of planning and unexpected downtime

### Cisco Umbrella DNS Security

## Accelerating your DNS-based security solution journey

Cisco Umbrella DNS Security Plan, Design, and Implement Services help accelerate the time to value of your cloud security solution by providing the expert assistance you need to get your deployment right the first time and aligned to your business goals. Beginning with a thorough understanding of your solution requirements, our experts work closely with you through design development and planning, pilot implementation, testing, and migration to help ensure success. And with our formal knowledge transfer and support after migration, you can empower your staff, giving them the confidence they need to maintain and evolve your network's advanced security posture.

With our Umbrella DNS Security Services, you can reap the benefits of Umbrella DNS more quickly, stop phishing and malware infections earlier, identify already-infected devices faster, and prevent data exfiltration. And it's delivered from the cloud, so Umbrella provides an effective security service that is open, automated, and simple to use.

We know the common obstacles that you face when trying to secure your infrastructure and extract business value from your IT investments. We leverage our experience from deploying secure networks across the globe in virtually every industry to help you speed through common obstacles and turn your technology into innovation that drives business advantage. No matter where you want to take your business, we can help you get there faster and with less risk.

## Why Cisco?

As the largest enterprise cybersecurity company in the world, Cisco leads the way with solutions that are driving the industry in secure access service edge (SASE), extended detection and response (XDR), and zero trust. Based on proven methodologies and more than 35 years of experience designing and implementing the world's most complex networks, we are ready to bring the expertise that can help you reduce complexity, improve security posture, and rapidly realize the value of Cisco Security solutions.
