

Connect and Protect Your Manufacturing with Secure Networking

Protect your people, applications, and data—wherever they are—with platform-driven, converged networking and security solutions.

Address security, financial, and management risks

Give your users the smooth digital experiences they expect. Tackle the diverse challenges and escalating security, financial, and management risks that come with teams and apps spread across different locations.

- Match bandwidth demand
- Protect increased cloud and SASE traffic
- Minimize attack vectors
- Shield against expanding cyber threats

Benefit from converged networking and security

Embrace a secure networking solution that avoids multivendor complexities and delivers:

- Protected networks, with the right security, in the right place—at the right time.
- A high-performance, flexible, and cloud-centric platform combining networking, security, and end-to-end visibility for rapid scalability of hybrid work models, SaaS, and multicloud access everywhere.
- Reduced complexity, increased agility, and lower costs by employing SDN-enabled programmability and AI/ML-powered insights and automation.

Customer story

Cisco and partner MDS helped enable a safe, flexible and efficient hybrid work model for STADA globally.

Break down technology silos

Help your factory move beyond technology silos and time-consuming integration.

Connect and protect your people, places, and things everywhere. Do this by seamlessly combining high-performance connectivity, identity, and policy; end-to-end visibility and enforcement; and AI/ML-powered insights and automation.

Find ways to simplify and grow

Get the backing of the world's largest commercial threat intelligence team and gain visibility beyond the networks you own. Suddenly, your users have secure access wherever they work to whatever they need, on-premises or in the cloud. Cisco's platform-driven solutions seamlessly combine identity, policy, and enforcement to make it happen.

Cisco Catalyst SD-WAN

Keep pace with dynamic business needs and stay ahead of continuously evolving network and security requirements with proactive IT operations.

Manufacturing use cases

- Reduced cyber security risk through highly secure and incredibly efficient mechanism supports remote workers, IoT devices and branch locations.
- Improved application performance with application monitoring, SASE direct connect, and integrated SASE platform, which optimizes remote worker UX, can improve real-time plant analytics insights, and improve apps such as collaboration platforms.
- Reduced FTE supporting security and remote access via cloud edge converged network and security solution.

SD-WAN and SASE

The new landscape of networking

Extend IT's visibility beyond the corporate network and into the internet and cloud with Cisco SD-WAN, the foundation for a SASE-enabled architecture.

Take a step towards convergence

Unleash a future of innovation and unified experiences through an integrated platform that can:

- Fast-track your time to value
- Lower your total cost of ownership
- Protect your investment in the long term
