Introduction

How are passwords encrypted by Cisco's ODBC driver?

Introduction

This document describes how the Open Database Connectivity (ODBC) drivers are encrypted.

How are passwords encrypted by Cisco's ODBC driver?

Version 6.2 ODBC driver on Microsoft Windows: the password is encrypted by the Windows crypto API and the client protocol version is 2.1.

Version 6.2 ODBC driver on Unix platforms: the password is encrypted in a Tiny Encryption Algorithm (TEAV) algorithm and the client protocol version is 1.3.

Version 7.x ODBC driver: the password is encrypted by OpenSSL functions and the client protocol version is 2.2.
