Introduction

The document describes the Studio user interface (UI) performance and how it can be improved.

Problem

In Version 7.0.1.00.11 through Version 7.0.1.00.14, the Studio UI is very slow to respond to user actions.

Solution

This is a known issue. In order to resolve the issue, apply Hotfix v7.0.1.00.15 or later to both the server and Studio installs. The Cisco support policy requires that the hotfix level of Studio never exceed the hotfix level of the server. Thus, in this case, the Studio fixes require the server to be patched with an equivalent or later hotfix also.
