[Example of a Command Session from Apache Sqoop Client](#)

Introduction

This document describes a client connection to Cisco Information Server (CIS) from Apache Sqoop.

Example of a Command Session from Apache Sqoop Client

This is a general pattern of the SQOOP usage:

```
sqoop import --table <your CIS published table> -connect "jdbc:compositesw:<hostname>:<jdbc
port>?domain=composite&dataSource=<dataservice>&encrypt=true&user=<CIS
user>&password=<password>" --driver cs.jdbc.driver.CompositeDriver --hive-import --hive-table
composite_tab --create-hive-table --split-by ordered
```

An actual use case:

```
sqoop import --table ViewOrder -connect
"jdbc:compositesw:dbapi@dvlabhost.cisco.com:9401?domain=composite&dataSource=examples
&encrypt=true&user=admin&password=admin" --driver cs.jdbc.driver.CompositeDriver --hive-
import --hive-table composite_tab --create-hive-table --split-by ordered
```
