Introduction

The opcmsg did not finish successfully OpC30–902. Option completed is not valid.

Prerequisites

Requirements

Cisco recommends that you have Scheduler version 5.3.1.261 or later.

Components Used

The information in this document is based on Scheduler version 5.3.1.261 or later.

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Problem

Messages sent by Scheduler to OpenView do not appear on the console.

Reason

The `opcmsg` command's application name argument requires quotes around the message.

Resolution

Use the `sysval 111` option in the Admiral database to indicate whether the application name in the openview msg should have quotes ("Y") or not ("N"). The default is "N".

Additionally, `sysval 107` can be used to indicate if quotes are needed around the `msg_txt` argument.
