## Introduction

This article describes the process of identifying products that support specific license reservation (SLR).

## Prerequisites

None.

## Identifying Products That Support SLR

### Step 1:

Go to [Cisco Smart Licensing](#) page, and then click **Smart Licensing Enabled Product Families**.

**Step result:** The system automatically downloads the **Smart Licensing Feature Roadmap** file to your computer.

The screenshot displays the Cisco Smart Licensing interface. At the top, there is a dark blue banner with the text "A new way to think about software licensing" and a graphic of a checklist and dollar signs. Below this, there is a navigation menu with "Product Docs", "Benefits", "Deployment", and "Resources". A "Partner Help" dropdown is visible on the right. The main content area features a dark blue box with the text "View Smart License documentation by product" and a dropdown menu labeled "Choose product family:". Below this, a red-bordered box highlights the link "Smart Licensing Enabled Product Families - XLS Download".

### Step 2:

Open the **Smart Licensing Feature Roadmap** file, locate the **SLR** or **SLR Factory Pre-Install** columns, and identify whether the product for which you need to perform specific license reservation supports this feature. Ensure that you also check which operating system (OS) versions are supported.
