[Introduction](#)

This document explains how to copy a system image from one device to another within the same router, and from one router to another.

[Prerequisites](#)

[Requirements](#)

There are no specific requirements for this document.

[Components Used](#)

This document is not restricted to specific software and hardware versions. The platforms used for the purpose of this document are Cisco 2500 series routers and Cisco 3600 series routers.

[Conventions](#)

Refer to [Cisco Technical Tips Conventions](#) for more information on document conventions.

[Copying from Device to Device Inside the Same Router](#)

The table below provides command options for copying a system image from one device to another (methods vary according to different platforms):

[Command Summary](#)

The table below lists the various locations to which you can copy an image from a TFTP server. These options vary according to different platforms. Refer to [Using URL Prefixes](#) for more information and in order to learn more about each of these options.

```
Router#copy tftp ?
```
