Introduction

This document is a sample configuration for Cisco IOS® support of the IPsec Network Address Translation (NAT) Transparency feature. It introduces support for IPsec traffic to travel through NAT or Point Address Translation (PAT) in the network by addressing many known incompatibilities between NAT and IPsec.

Prerequisites

Requirements

There are no specific requirements for this document.

Components Used

The information in this document is based on these software and hardware versions:

- Cisco 2621 Router 12.2.13.7T1 and later
- Cisco VPN Client 3.6.3 (configuration not shown)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Configure

In this section, you are presented with the information to configure the features described in this document.
Note: Use the Command Lookup Tool (registered customers only) to find more information on the commands used in this document.

Network Diagram

This document uses this network setup:

Router Configuration

Complete these steps:

1. Issue the `show version` command to display the software version that the switch runs.

   ```
   2621#show version
   Cisco Internetwork Operating System Software
   IOS (tm) C2600 Software (C2600-IK903S3-M), Version 12.2(13.7)T1,
   MAINTENANCE INTERIM SOFTWARE
   TAC Support: http://www.cisco.com/tac
   Copyright (c) 1986-2002 by cisco Systems, Inc.
   Compiled Sat 21-Dec-02 14:10 by ccai
   Image text-base: 0x80008098, data-base: 0x818B6330
   ROM: System Bootstrap, Version 11.3(2)XA4, RELEASE SOFTWARE (fc1)
   ROM: C2600 Software (C2600-IK903S3-M), Version 12.2(13.7)T1,
   MAINTENANCE INTERIM SOFTWARE
   
   2621 uptime is 33 minutes
   System returned to ROM by reload
   System image file is "flash:c2600-ik903s3-mz.122-13.7.T1"
   
   cisco 2621 (MPC860) processor (revision 0x102) with 60416K/5120K bytes of memory.
   Processor board ID JAB0407020V (2751454139)
   M860 processor: part number 0, mask 49
   Bridging software.
   X.25 software, Version 3.0.0.
   Primary Rate ISDN software, Version 1.1.
   2 FastEthernet/IEEE 802.3 interface(s)
   2 Channelized T1/PRI port(s)
   32K bytes of non-volatile configuration memory.
   16384K bytes of processor board System flash (Read/Write)
   
   Configuration register is 0x2102
   ```

2. Issue the `show run` command.

   ```
   2621#show run
   Building configuration...
   
   Current configuration : 2899 bytes
   !
   version 12.2
   service timestamps debug datatime msec localtime
   service timestamps log datatime msec localtime

Verify

Use this section to confirm that your configuration works properly.

The Output Interpreter Tool (registered customers only) (OIT) supports certain show commands. Use the OIT to view an analysis of show command output.

- **show crypto isakmp sa** Displays all current Internet Key Exchange (IKE) security associations (SAs) at a peer.

  2621#show crypto isakmp sa
  f_vrf/i_vrf dst src state conn-id slot
  / 172.16.142.191 171.69.89.82 QM_IDLE 4 0

- **show crypto ipsec sa** Displays the settings used by current SAs.

  2621#show crypto ipsec sa

• **show crypto engine [brief | configuration]**Displays a summary of the configuration information for the crypto engines. Use this command in privileged EXEC mode. This command displays all crypto engines and displays the AIM–VPN product name.

2621#**show crypto engine configuration**

crypto engine name: unknown

!--- Name of the crypto engine as assigned with the
!--- key-name argument in the **crypto key generate dss** command.

crypto engine type: software

!--- If "software" is listed, the crypto engine resides in either
!--- the Route Switch Processor (RSP) (the Cisco IOS crypto engine) or
!--- in a second-generation Versatile Interface Processor (VIP2).

serial number: A3FFDBBB

crypto engine state: installed

!--- The state "installed" indicates that a crypto engine is located
!--- in the given slot, but is not configured for encryption.
Troubleshoot

Use this section to troubleshoot your configuration.

Troubleshooting Commands

The Output Interpreter Tool (registered customers only) (OIT) supports certain `show` commands. Use the OIT to view an analysis of `show` command output.

Refer to IP Security Troubleshooting – Understanding and Using debug Commands for additional troubleshooting information.

Note: Refer to Important Information on Debug Commands before you use `debug` commands.

This configuration receives NAT Keepalives every 20 seconds as configured.

- `debug crypto ipsec` Displays the IPsec negotiations of phase 2.
- `debug crypto isakmp` Displays the ISAKMP negotiations of phase 1.
- `debug crypto engine` Displays the traffic that is encrypted.
