## Introduction

This document describes the Sensor CLI login procedure for both network and hardware sensors of Cisco Cyber Vision.

## Hardware Sensor - IC3000

### Before Cyber Vision Version 4.3.0

**Note:** Before the Cyber Vision version 4.3.0, the IC3000 sensor was deployed as a Virtual Machine (VM) in the Cisco IOx ((Cisco IOs + linuX) is an end-to-end application framework that provides application-hosting capabilities for different application types on Cisco network platforms) local manager.

---

Login to the IC3000 local manager interface ([https://ip\\_address:8443](https://ip_address:8443)) as an admin user, navigate to applications and then click the **manage** app option.

Applications

## Cisco\_Cyber\_Vision

**RUNNING**

Cyber Vision Sensor Image for IC3000

**TYPE**  
vm

**VERSION**  
4.2.4+202308232047

**PROFILE**  
custom

**Memory \***

**90.0%**

**CPU \***

**100.0%**

■ Stop

⚙ Manage

Choose the App-info menu, and click the **Cisco\_Cyber\_Vision.pem** option present in the App Access section as shown:

Application information	
ID:	Cisco_Cyber_Vision
State:	RUNNING
Name:	Cisco Cyber Vision
Cartridge Required:	<ul style="list-style-type: none"><li>None</li></ul>
Version:	4.2.4+202308232047
Author:	Cisco
Author link:	
Application type:	vm
Description:	Cyber Vision Sensor Image for IC3000
Debug mode:	false

App Access	
Console Access	<code>ssh -p {SSH_PORT} -i <a href="#">Cisco_Cyber_Vision.pem</a> appconsole@10.106.13.143</code>

Copy the Rivest-Shamir-Addleman (RSA) key present in the **Cisco\_Cyber\_Vision.pem** file.  
Now, login to the Cyber Vision Center CLI and then create a new file with the RSA key contents in the file.

Using any Linux editor, for example, vi editor (visual editor) creates a file and pastes the contents of the RSA key file into this file (**Cisco\_Cyber\_Vision.pem** is the file name in this example).

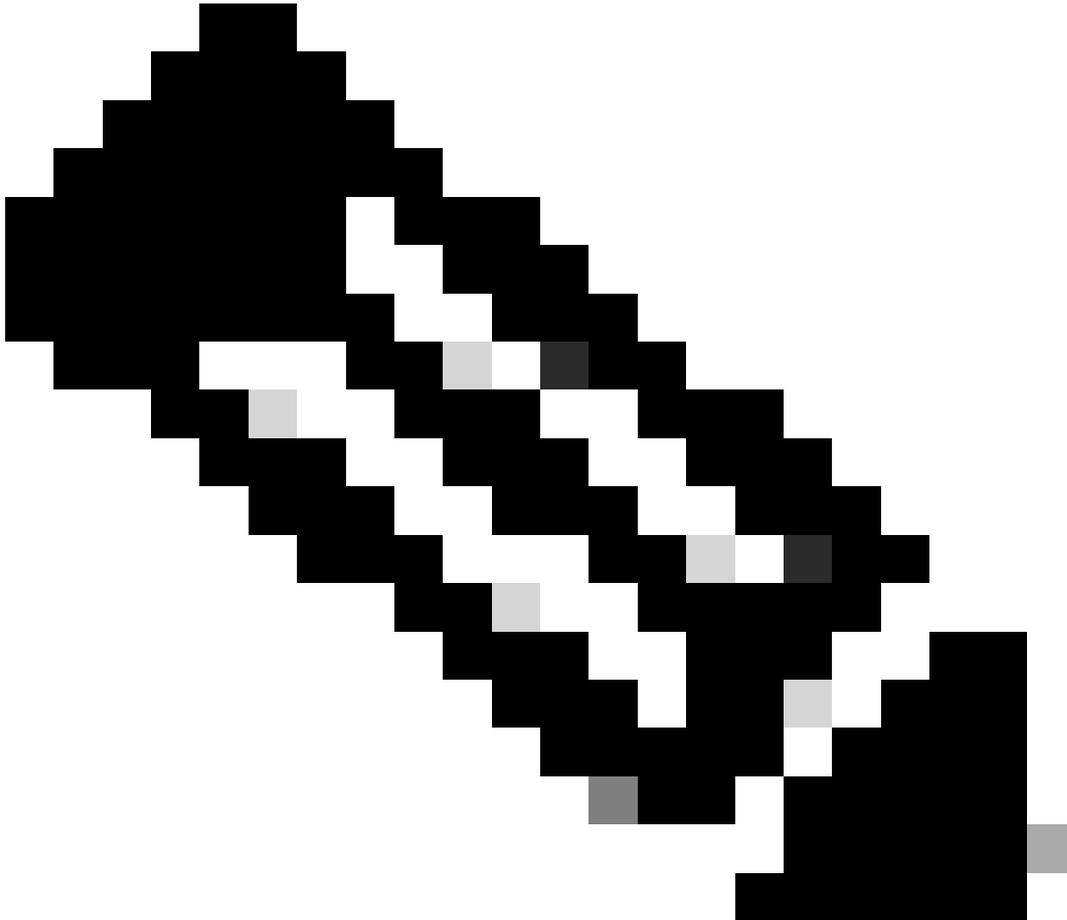

```
cv-admin@Center-4:~$  
cv-admin@Center-4:~$ sudo su -  
root@Center-4:~#  
root@Center-4:~# vi Cisco_cyber_Vision.pem  
root@Center-4:~#  
root@Center-4:~# chmod 400 Cisco_cyber_Vision.pem  
root@Center-4:~#
```

Restrict the permissions to the file **Cisco\_Cyber\_Vision.pem**, by using the command **chmod 400**.  
Now the IC3000 sensor console can be accessed using:

```
ssh -p {SSH_PORT} -i file_name appconsole@LocalManagerIP
```

For example, if the Secure Shell (SSH) port configured in the setup is 22, **Cisco\_Cyber\_Vision.pem** is the filename and Local Manager IP address (LMIP) is the IP address of LocalManager, then the result is `ssh -p 22 -i Cisco_Cyber_Vision.pem appconsole@LMIP`.

---

**Note:** The IC3000 certificate changes every time the switch is rebooted and hence this procedure needs to be repeated.

---

## Cyber Vision 4.3.0 Version Onwards

The Cisco Cyber Vision sensor application for IC3000 format changed from VM to Docker in version 4.3.0. For more details regarding the same, refer to [Cisco-Cyber-Vision Release-Notes-4-3-0.pdf](#).

Login to the IC3000 local manager interface ([https://ip\\_address:8443](https://ip_address:8443)) as an admin user, navigate to applications and then click the **manage** app option.

Applications    App Groups    Remote Docker Workflow    Docker Layers

---

**ccv\_sensor\_iox\_activ...** RUNNING

Cisco Cyber Vision sensor with Active Discovery for IC...

TYPE	VERSION	PROFILE
docker	4.3.0-202311161552	exclusive

**Memory \*** 100.0%

**CPU \*** 100.0%

■ Stop

⚙️ Manage

Then navigate to the App-Console tab in order to access the sensor application.

>\_ Command        Disconnect

```

sh-5.0#
sh-5.0#
sh-5.0#
sh-5.0#
sh-5.0#
sh-5.0#

```

## Network Sensors

Login to the respective switch CLI and copy the sensor application ID using this command:

```
show app-hosting list
```

```
C9300L-24P-4G#sh app-hosting list
```

```
App id
```

```
State
```

```
-----  
ccv_sensor_iox_x86_64
```

```
RUNNING
```

Log in to the sensor application using:

```
app-hosting connect appid sensor_app_name session
```

For example, in this case, it is `app-hosting connect appid ccv_sensor_iox_x86_64 session`.

```
C9300L-24P-4G#app-hosting connect appid ccv_sensor_iox_x86_64 session
```

```
sh-5.0#
```

```
sh-5.0#
```

```
sh-5.0#
```

The prompt shown in the screen capture confirms that the sensor login is successful.
