Can the time stamps on CRES messages be changed from GMT?

Related Information

Introduction

This document describes how to set your Cisco Registered Envelope Service (CRES) account to show preferred time zones based on your location.

Can the time stamps on CRES messages be changed from GMT?

Previously, the time stamps on Cisco Registered Envelope Service (CRES) emails were based on the CRES server's time settings, which are set to universal time (UTC/GMT) and could not be changed by the user.

As of CRES Version 4.2, you can now log-in on your CRES account and set the time stamp.

- Log-in to <http://res.cisco.com>
- Select **Edit Profile** on the left hand menu.
- Use the **Time** section and associated drop-down menus for Time Format and Time Zone to set to your preferred time zone.

Example:

Time

Time Format Select to view time in 12- or 24-hour format.

Time Zone Select time zone to view and enter date and time in your preferred time zone.

- Save changes to your profile.
