Contents

ESA models C3x0, C6x0 and X10x0 may be custom ordered to include an LC type 1000 Mbps SX (shortwave) Fiber interface. This add-on card is dual port.

PLEASE NOTE: this option is not available as a field add-on, it must be included at original time of system manufacture.

If an application requires LC connections, SC/LC adapters may be ordered from:

<http://www.cypressindustries.com/>

Cisco does not sell these adapters.

In a system shipped with this optional hardware, Ethernet interfaces Data 3 and Data 4 under the CLI option etherconfig will represent the two Fiber ports.
