Introduction

This document describes how to add domain-specific disclaimers on your Cisco Email Security Appliance (ESA).

Add Domain-Specific Disclaimers

Typically end users will add a disclaimer on the outbound listener. This can be done on the ESA GUI *Network > Listeners > Listener Name > Disclaimer Above* or *Disclaimer Below*. With an already written disclaimer, you can add this to the listener as needed.

There are times where it may be a requirement to add domain-specific disclaimers. Adding domain-specific disclaimer is a two-step process.

Create the Disclaimer(s)

Disclaimers are created from the ESA GUI *Mail Policies > Text Resources > Add Text Resources*.

For this example, we will use the *Disclaimer Template* type and create three separate disclaimers: example_com, example_net, and example_org.

Text Resource Name	Type	Preview	Delete
example_com	Disclaimer Template		
example_net	Disclaimer Template		
example_org	Disclaimer Template		

Link the Disclaimers to the Specific Domains with a Content Filter

The disclaimer can be linked to the specific domain(s) through content filters. From the ESA GUI *Mail Policies > Outgoing Content Filters* and click *Add Filter*. With *Add Condition*, using the *Envelope Sender* option, specify the domain. Finally, with *Add Action*, using the *Add Disclaimer Text* option, specify if you want to use the disclaimer as a header or footer, and select your pre-written disclaimer.

Continuing with the example started when we created the disclaimers, we will use example.com as the domain, and the associated disclaimer:

Add Content Filter

The screenshot shows three sections of the configuration interface:

- Content Filter Settings:**
 - Name: `add_disclaimer_example_com`
 - Currently Used by Policies: *No policies currently use this rule.*
 - Description: `This will add the disclaimer for all outgoing mail from "example.com" domain.`
- Conditions:**

Order	Condition	Rule	Delete
1	Envelope Sender	mail-from == "@example.com"	
- Actions:**

Order	Action	Rule	Delete
1	Add Disclaimer Text	add-heading("example_com")	

Link the Disclaimers to the Specific Domains with a Message Filter

The disclaimer can also be added to specific domains via message filters. Message filters are added from the ESA CLI using *filters*:

```
myesa.local> filters
```

Choose the operation you want to perform:

- NEW - Create a new filter.
 - IMPORT - Import a filter script from a file.
- ```
[]> new
```

```
Enter filter script. Enter '.' on its own line to end.
example_com_Disclaimer:if (mail-from == "@example.com")
{
add-footer("example_com");
}
.
1 filters added.
```

With similar script – alter the mail-from and add-footer lines, and repeat adding a message filter using the *new* sub-command in *filters*, adding associated filters for example.net, and example.org. You can use the *list* sub-command to see your newly created filters:

```
[]> list
```

```
Num Active Valid Name
```

```
1 Y Y example_com_Disclaimer
2 Y Y example_net_Disclaimer
3 Y Y example_org_Disclaimer
```

Return to the main ESA CLI prompt and *commit* your changes.
