

# ISE Version 1.3 Hotspot Configuration Example

## Contents

[Introduction](#)

[Note](#)

## Introduction

Cisco Identity Services Engine (ISE) Version 1.3 has a new type of Guest Portal called Hotspot. This type of portal allows you to provide guest access to the network and does not force the user to provide any credentials. This document describes how to configure and troubleshoot this functionality.

## Note

This document has been superseded by the Guest deployment guide available here : <https://community.cisco.com/t5/security-documents/ise-guest-access-deployment-guide/ta-p/3640475>
