Description

After **October 31st, 2024**, Cisco Secure Endpoint will migrate the policy signing mechanism from **SHA-1** to **SHA-256**. This changes the algorithm the Secure Endpoint connectors use to verify the authenticity of the policy settings.

Customer Impact

The following versions of Secure Endpoint connectors will lose the ability to upgrade Policy and perform Portal Management **after October 31st, 2024**:

- Windows connector version **6.3.7 and older** (released before [October 2019](#))
- Mac/Linux connector versions **1.10.2 and older** (released before [July 2019](#))

Recommended Action

To continue Secure Endpoint Policy upgrades and Portal Management existing connectors must be upgraded to newer than affected versions **before October 31st, 2024**. It is suggested to upgrade to the latest available Secure Endpoints version.
