Introduction

This document describes how to configure DUAL ISP Failover with PBR and IP SLAs on an FTD that is managed by FMC.

Prerequisites

Requirements

Cisco recommends that you have knowledge of these topics:

- Policy Based Routing (PBR)
- Internet protocol service level agreement (IP SLA)
- Firepower Management Center (FMC)
- Firepower Threat Defense (FTD)

Components Used

The information in this document is based on these software and hardware versions:

- FMCv 7.3.0
- FTDv 7.3.0

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, ensure that you understand the potential impact of any command.

Background Information

Static Route Tracking Feature Overview

Static Route Tracking feature allows the FTD to use a connection to a secondary ISP in the event that the primary leased line becomes unavailable. In order to achieve this redundancy, the FTD associates a static route with a monitoring target that you define. The SSLA operation monitors the target with periodic ICMP echo requests.

If an echo reply is not received, then the object is considered down, and the associated route is removed from the routing table. A previously configured backup route is used in place of the route that is removed. While the backup route is in use, the SLA monitor operation continues its attempts to reach the monitoring target.

Once the target is available again, the first route is replaced in the routing table, and the backup route is removed.

You can now configure multiple next-hops and policy-based routing forwarding actions at the same time. When traffic matches the criteria for the route, the system attempts to forward traffic to the IP addresses in the order you specify, until it succeeds.

The feature is available on FTD devices running version 7.1 and later managed by an FMC version 7.3 and later.

Configure

Network Diagram

This image provides an example of a network diagram.

Image 1. Diagram example.

ISP1 = 10.115.117.1

ISP2 = 172.20.20.13

Configurations

Step 1. Configure the SLA Monitor objects.

On the FMC, navigate to Object > Object Management > SLA Monitor > Add SLA Monitor and add an SLA Monitor object for the ISP IP addresses.

SLA monitor for the primary default gateway (ISP1).

Edit SLA Monitor Object

<p>Name: <input type="text" value="SAL1"/></p> <p>Frequency (seconds): <input type="text" value="60"/> <small>(1-604800)</small></p> <p>Threshold (milliseconds): <input type="text" value="5000"/> <small>(0-60000)</small></p> <p>Data Size (bytes): <input type="text" value="28"/> <small>(0-16384)</small></p> <p>Number of Packets: <input type="text" value="1"/></p>	<p>Description: <input type="text"/></p> <p>SLA Monitor ID*: <input type="text" value="1"/></p> <p>Timeout (milliseconds): <input type="text" value="5000"/> <small>(0-604800000)</small></p> <p>ToS: <input type="text" value="0"/></p> <p>Monitor Address*: <input type="text" value="10.115.117.1"/></p>
--	---

```
route-map FMC_GENERATED_PBR_1679065711925
, permit, sequence 5
Match clauses:
ip address (access-lists): internal_networks

Set clauses:
ip next-hop verify-availability 10.115.117.1 1
track 1 [up]

ip next-hop 10.115.117.234
route-map FMC_GENERATED_PBR_1679065711925, permit, sequence 10
Match clauses:
ip address (access-lists): all_ipv4_for_pbr

Set clauses:
ip next-hop verify-availability 172.20.20.13 2
track 2 [up]

ip next-hop 172.20.20.77
firepower#
```

- show running-config sla monitor: This command displays the SLA configuration.

```
<#root>
firepower#
show running-config sla monitor

sla monitor 1

type echo protocol ipIcmpEcho 10.115.117.1 interface outside
sla monitor schedule 1 life forever start-time now

sla monitor 2

type echo protocol ipIcmpEcho 172.20.20.13 interface backup
sla monitor schedule 2 life forever start-time now
firepower#
```

- show sla monitor configuration: This command displays the SLA configuration values.

```
<#root>
firepower#
show sla monitor configuration
```

SA Agent, Infrastructure Engine-II
Entry number:
