## Introduction

This document describes the Manager Organization dashboard in Security Cloud Control (SCC) and how it manages license, and user access functions.

## Prerequisites

### Requirements

There are no specific requirements for this document.

### Components Used

This document is not restricted to specific software and hardware versions.

The information in this document was created from the devices in a specific lab environment. All of the

devices used in this document started with a cleared (default) configuration. If your network is live, ensure that you understand the potential impact of any command.

## Background Information

The SCC Manager dashboard provides a centralized framework for the administration of users and products across multiple business units, defined as Managed Organizations.

## Core Capabilities

The SCC manager dashboard facilitates these administrative functions:

- **Resource Sharing:** Centralize licenses, user groups, and permissions across Managed Organizations.
- **Life Cycle Management:** Streamline the creation, addition, and removal of Managed Organizations.
- **Policy Standardization:** Distribute rules and rule objects consistently across Managed Organizations.

## Provisioning Access

Getting a Manager Organization in your SCC dashboard requires submitting a request to the Technical Assistance Center (TAC) with these details:

- Current SCC dashboard status (existing vs. new deployment).
- Projected number of organizations to be managed within the Manager Organization.

Upon submission, TAC coordinates with the Product Management team to review and provision the request.

## Subscription Management

### Claiming Licenses

Navigate to **Manager Administration > Subscriptions > Claim Subscription** via the left-hand navigation menu.

**Note:** Suite claim codes are not supported.

---

### Uplifting Subscriptions

Subscriptions previously claimed by a Managed Organization can be redistributed to the Manager Organization through an uplift process. Please contact TAC to facilitate this transition.

---

**Note:** Trial claim codes cannot be uplifted and must be claimed on the Manager Organization.

---

## Distributing Licences

Once a subscription is provisioned to the Manager Organization, distribute resources via **Manager Administration > Managed Organizations** and select the **Organization**.

## Applying Licences to Managed Organizations

The minimum number of licenses in a Managed Organization is determined by the subscription service. Some common services quantities are:

Secure Access: 50

Secure Workload: 100

AI-Defense: 50

Multicloud Defense: No minimum

Extended Detection and Response (XDR): No minimum

## Administrative Access

To ensure appropriate governance, administrators must be explicitly assigned to the Managed Organization. Access can be granted by navigating to **Manager Administration > Administrator Access** and assigning the **required permissions** to the relevant personnel.
