Introduction

This document describes required domains for allow list configuration to ensure website functionality in Block Page Bypass and Allow-Only modes.

Add Domains to Allow List for Service Functionality

To ensure that specific websites function correctly when using [Block Page Bypass](#) or [Allow-Only mode](#) in Cisco Umbrella, you must add certain domains to your allow list.

Step-by-Step Procedure

1. Identify Required Domains

1. Review the services in the tables in this document.
2. Locate the corresponding domains for each service you want to allow.

2. Add Domains to the Allow List

1. Log in to your Cisco Umbrella Dashboard.
2. Navigate to **Policy>Policy Components>Destination Lists**.
3. Select the applicable destination list or create a new one.
4. Add the required domains for each service to your allow list.

3. Apply and Verify Changes

1. Clear your browser cache.
2. Wait several minutes for policy changes to take effect.
3. Test website functionality for the affected services.
4. If the websites do not work as expected after adding the domains, open a Cisco Umbrella Support ticket.

Note: Allow-Only mode applies only to DNS requests, not to HTTP or HTTPS requests. This destination list applies to services in North America. Domain requirements can differ based on language or geographic location

Allow-Only Mode Domains

These domains are exclusively affected by Allow-Only mode:

Service	Domains
google.com	ssl.google-analytics.com www.google-analytics.com

Block Page Bypass and Allow-Only Mode Domains

These domains are services affected by Block Page Bypass and Allow-Only mode.

Service	Domains
Youtube	youtube.com www.youtube-nocookie.com c.youtube.com ytimg.l.google.com googlesyndication.com ytimg.com accounts.google.com</spanm.youtube.com (specific to mobile) googlevideo.com" (mostly for mobile, required for YouTube app for mobile) youtube.l.google.comyoutu.be
Twitter	twimg.com api.twitter.com pic.twitter.com dev.twitter.com platform.twitter.com search.twitter.com userstream.twitter.com twimg0-a.akamaihd.net upload.twitter.com api.twitter.com (This provides access to Twitter via the web but redirects to "twitter.com" upon login.)
