Introduction

This document describes how Cisco Umbrella users can download Cisco Secure Client.

Prerequisites

Requirements

There are no specific requirements for this document.

Components Used

This document is not restricted to specific software and hardware versions.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, ensure that you understand the potential impact of any command.

Overview

Umbrella customers are licensed to download Cisco Secure Client. This functionality is included automatically in our most common licenses, including:

- DNS Security Essentials
- DNS Security Advantage
- SIG Security Essentials
- SIG Security Advantage

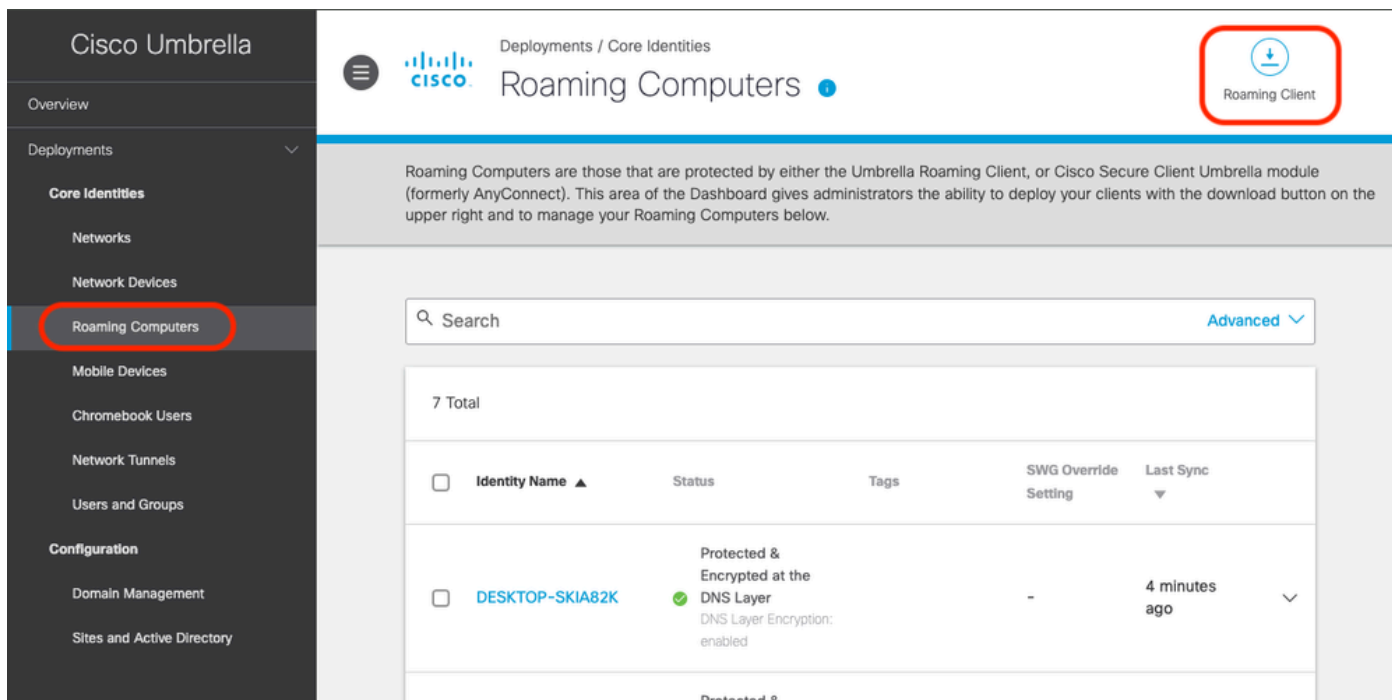

The Cisco Secure Client (CSC) is a unified security endpoint agent that delivers multiple security services to protect the enterprise, including VPN* and Umbrella Roaming Security. If you do not have one of these packages but would like to use CSC, you can contact your account manager to grant CSC licenses for the Umbrella Roaming Security Module.

* Cisco VPN protection is optional and can be disabled for customers' using third party VPNs.

Downloading the Latest Version of Cisco Secure Client

The best way to download the Cisco Secure Client is through the Umbrella Dashboard:

1. Select **Deployments > Roaming Computers** and select the **Download** icon for **Roaming Client**.

Cisco Umbrella

Deployments / Core Identities

Roaming Computers

Roaming Client

Roaming Computers are those that are protected by either the Umbrella Roaming Client, or Cisco Secure Client Umbrella module (formerly AnyConnect). This area of the Dashboard gives administrators the ability to deploy your clients with the download button on the upper right and to manage your Roaming Computers below.

Search

		Protected &			

25539101496724

2. Select the version of CSC according to your operating system and download the Umbrella Roaming Security Module:

- **Pre-Deployment Package:** (Recommended) Most common for standalone, network installs, and mass deployment.
- **Headend Deployment Package:** For Cisco-VPN customers to deploy central from the VPN headend.

Download Cisco Secure Client

The Cisco Secure Client protects laptops and desktops, on and off the network. For more information, including prerequisites, see Umbrella's [Help](#).

 For your [internal domains](#) to resolve, you must add [internal domains](#) before you deploy.

Cisco Secure Client (Recommended)

Step 1. Download the latest version of Cisco Secure Client

Pre-Deployment Package:

[Windows \(x86/x64\)](#) | [Windows \(Arm\)](#) | [macOS](#)

Headend Deployment Package:

[Windows \(x86/x64\)](#) | [Windows \(Arm\)](#) | [macOS](#)

Note: Earlier versions of Cisco Secure Client can be downloaded at [Software Central](#)

Step 2. Download the Umbrella Roaming Security Module Profile

The Cisco Secure Client can be configured to enable an Umbrella Roaming Security module that provides both DNS and Web Security. The installer must be combined with the Module Profile. For more information, see Umbrella's [Help](#).

Download Module Profile

The Umbrella module requires Cisco Secure Client for Windows or macOS. Cisco recommends the latest release.

25539117259412

Downloading the Umbrella Roaming Security Module Profile

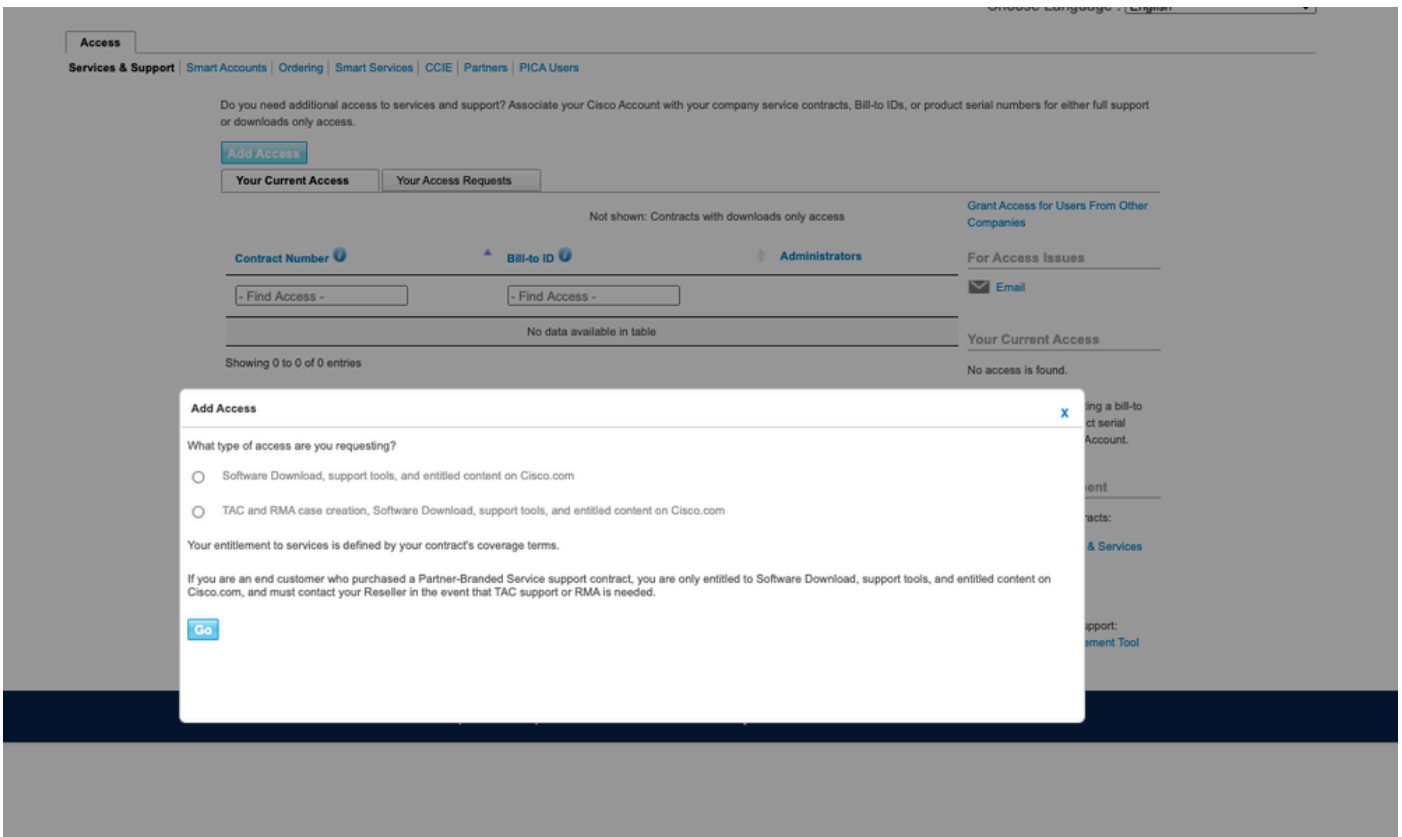

You also need to download the Umbrella module profile (Step 2) described earlier in this article. This is required for the endpoint to register with Umbrella.

See the [Deployment Guide](#) for details of how to deploy the profile.

Downloading a Specific Version of Cisco Secure Client

If you want a specific version of AnyConnect or Cisco Secure Client, you can search the [Cisco downloads site](#).

Your Cisco account automatically associates with your Umbrella subscription. For older accounts that were not automatically associated, you can manually do so by using your contract number in the **Access Management** section of <https://id.cisco.com/> (select **Access Management** > **Add Access**).

The screenshot displays the Cisco Access Management web interface. At the top, there is a navigation bar with 'Access' selected. Below it, a breadcrumb trail shows 'Services & Support | Smart Accounts | Ordering | Smart Services | CCIE | Partners | PICA Users'. The main content area contains a heading 'Do you need additional access to services and support? Associate your Cisco Account with your company service contracts, Bill-to IDs, or product serial numbers for either full support or downloads only access.' Below this is an 'Add Access' button and two tabs: 'Your Current Access' (selected) and 'Your Access Requests'. A table header indicates 'Not shown: Contracts with downloads only access'. The table has columns for 'Contract Number', 'Bill-to ID', and 'Administrators', with search boxes for each. The table is currently empty, showing 'No data available in table' and 'Showing 0 to 0 of 0 entries'. On the right side, there are links for 'Grant Access for Users From Other Companies', 'For Access Issues', and 'Email'. A modal dialog box titled 'Add Access' is open in the foreground, asking 'What type of access are you requesting?' with two radio button options: 'Software Download, support tools, and entitled content on Cisco.com' and 'TAC and RMA case creation, Software Download, support tools, and entitled content on Cisco.com'. Below the options, it states 'Your entitlement to services is defined by your contract's coverage terms.' and provides a note for end customers. A 'Go' button is at the bottom of the dialog.
