## Introduction

This document describes how to enable developer mode in the Chrome browser for the Umbrella Chromebook Client (UCC).

## Overview

The Chrome browser's Developer mode must be enabled in order to collect diagnostic logs from both the Umbrella Chromebook Client App and the Umbrella Chromebook Client Extension.

## Solution

If Developer mode access is restricted, use these steps to enable it:

1. Log into the Google Admin console (at [admin.google.com](https://admin.google.com)).
2. Navigate to **Device > Chrome > Settings**.
3. On the left, select the proper organization unit that contains the users whose configuration you want to change.
4. Update the Developer Tool settings with “*Always allow use of built-in developer tools*”.
5. Changes you make for an organization are also inherited by users in child organizations unless overridden at a lower level. The Admin console marks whether a setting is Inherited or overridden (marked as "Locally applied").
6. Click **SAVE**.

Google Admin

Search for users, groups or settings

Devices > Chrome > Settings

Search for organizational units

Search or add a filter

Spell check

Inherited from Google default

Allow the user to decide

Spell check service

Locally applied

Allow the user to decide

Google Translate

Locally applied

Allow the user to decide

Alternate error pages

Locally applied

Allow the user to decide

Developer tools

Locally applied

Always allow use of built-in developer tools

Note: to prevent end-users from tampering with force-installed extensions, developer tools should be blocked.

Form auto-fill

Locally applied

Allow user to configure

Payment methods

Inherited from Google default

Allow websites to check if the user has payment methods saved

Emoji suggestions

Inherited from Google default

Disable emoji suggestions when users type

DNS pre-fetching

Locally applied

Allow the user to decide
