Introduction

This document describes how to use the Application Attributes feature in the Cisco Umbrella App Discovery Report.

Overview

The [Application Attributes feature in the Cisco Umbrella App Discovery Report](#) assists with risk assessment capabilities.

Application attributes significantly broaden the contextual information delivered by Cisco Umbrella for every identified app, empowering Cisco Umbrella customers to make well-informed policy decisions that align with their needs.

Risk Details	Identities (34)	Attributes (38)			
Categories	Attribute	Value	Created	Updated	Provides GDPR information Discloses the ways in which personal data is collected, processed, stored, and used in compliance with the General Data Protection Regulation (GDPR).
Compliance	Provides GDPR information	Yes https://www.cisc...	Apr 23, 2023	Apr 23, 2023	
Vulnerabilities	PCI_DSS	Yes	Aug 12, 2016	Jun 10, 2022	
Access Control	HIPAA	Yes	Aug 12, 2016	Jun 10, 2022	
Data Security	FEDRAMP	Yes	Aug 12, 2016	Jun 10, 2022	
Auditability	ISO 27001 / 27002	Yes	Aug 12, 2016	Jun 10, 2022	
Email Authenticity	COBIT	No	Aug 12, 2016	Jun 10, 2022	

18263606083476

With these application attributes, Cisco Umbrella admins can build additional context on newly-discovered applications in their environment while significantly reducing the time to decide and block risky applications.

Using up to thirty-eight application attributes across six categories, Cisco Umbrella administrators possess an extensive array of supplementary insights about applications, complementing the existing risk classification. These insights encompass:

- **Compliance:** Existence of certifications like PCI-DSS, GDPR, HIPPA, and FEDRAMP for both the vendor and the application.
- **Vulnerabilities:** Known TLS/SSL vulnerabilities linked with the Application like POODLE and BEAST.
- **Access Control:** Supported Access control mechanisms like SSO and MFA.
- **Data Security:** Data in-transit specifications like TLS version support, weak ciphers, and more.
- **Auditability:** Auditing availability.
- **Email Authenticity:** Measures to control email authenticity.

How Do I Determine if the Attributes Information Is Updated?

Each application attribute has both creation and update dates to help admins determine whether the information is relevant to their decision-making.

How Do I Access this Feature?

You can access the application attributes by navigating to **Reporting > Core Reports > App Discovery > [Application] > Attributes**.
