[Change in Migration](#)

Introduction

This document describes how to change from multi-orgs to a single org in Cisco Umbrella.

Change in Migration

Automated migration from multiple organizations with multiple domains in Cisco Umbrella is no longer available at this time. To migrate going forward:

1. Deploy or redeploy new AD Connectors on the new target organization.
2. Deploy or redeploy new VAs to the new target organization.
3. Create desired policies once the AD tree data is imported.
4. Delete networks from the target organization and create in the new organization.
5. Migrate users to the new VAs.
6. Decommission the old AD Connector and VAs.
7. Complete the migration.
