

Use PAC File and Roaming Client Scenarios on Client Machines

Contents

[Introduction](#)

[Overview](#)

Introduction

This document describes the expected behavior when a client machine has both a PAC file and Roaming Client installed.

Overview

- If the system detects a PAC file and the user is roaming, the PAC file does not load because the user is outside the branch office. Implementation for this feature is in progress.
- The user receives DNS-level security.
- If the user has the ERC installed, the system enables intelligent proxy functionality.
