## Introduction

This document outlines the scenarios and step-by-step procedures required to perform a full-state backup of a UCS Central machine and recover it on a new machine.

### Scenarios that require a UCS Central (UCSC) restore from a full-state backup

1. Lab Recreation for Production UCS Central: When there is a need to recreate the lab environment for the production UCS Central setup.
2. Disaster Recovery (DR): In the event of a disaster recovery scenario where restoring from a backup is necessary.
3. Unsupported Direct Upgrade Path: When the target version upgrade is not directly supported from the current version (Example:- There is **no direct upgrade path to Cisco UCS Central release 2.1(1a)** from earlier releases).

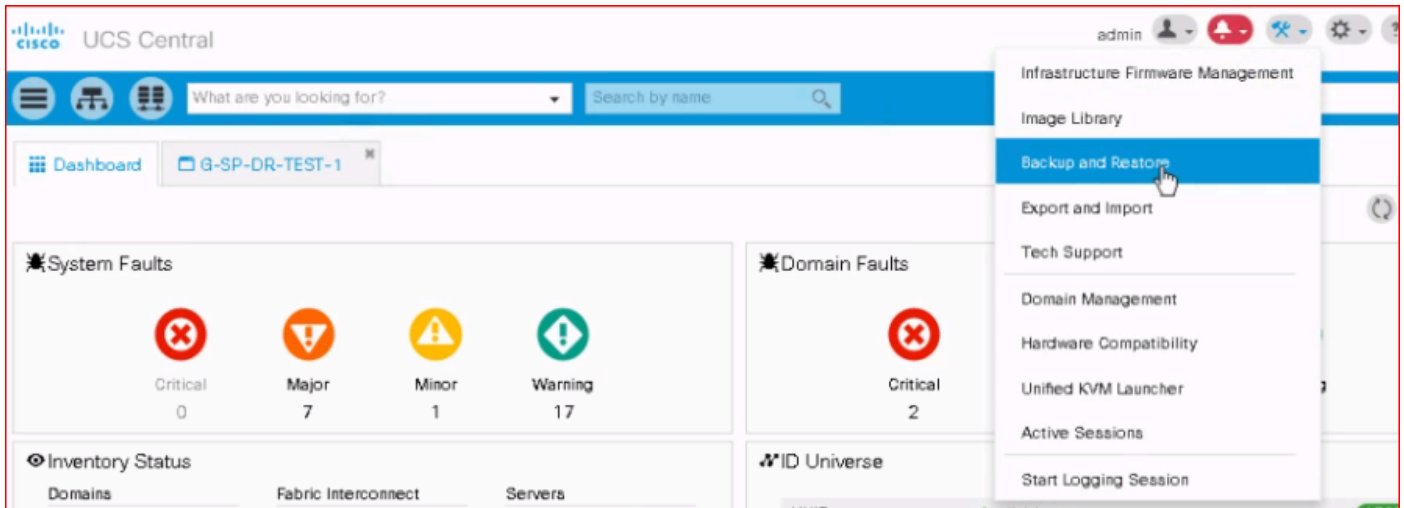

**Note:** Backup restoration to Cisco UCS Central Release 2.1(1a) is supported from version 2.0(1s) and later.

---

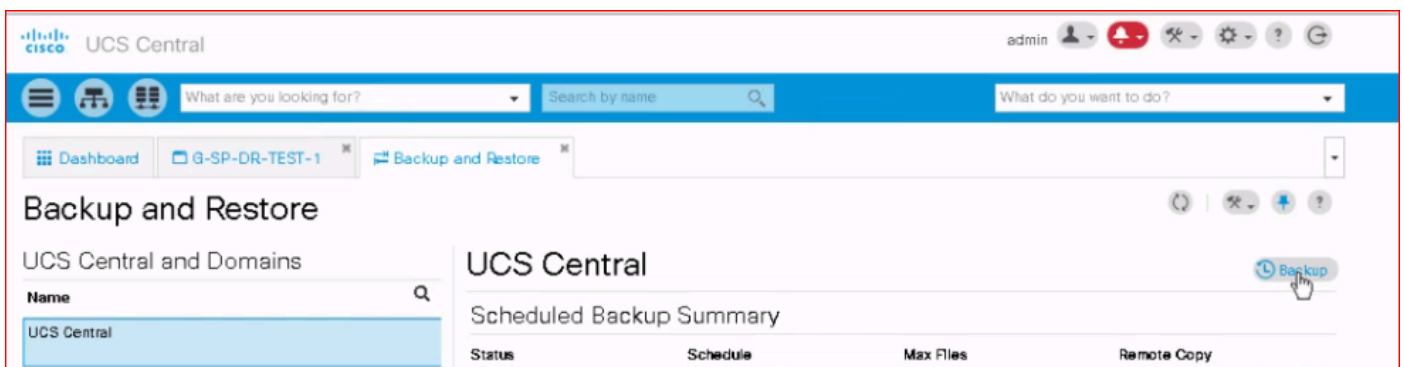

## Step-by-step process to restore the UCS Central

### 1. Capture backup from running UCS Central machine.

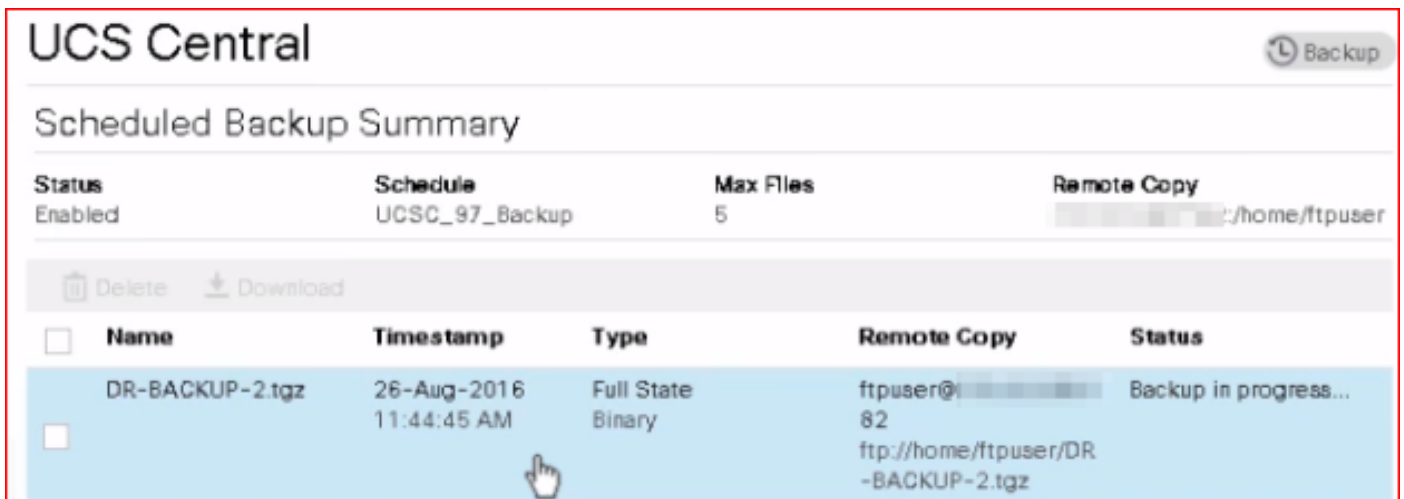

(a) Select Backup and restore option from the tools menu.

(b) Select Backup option.

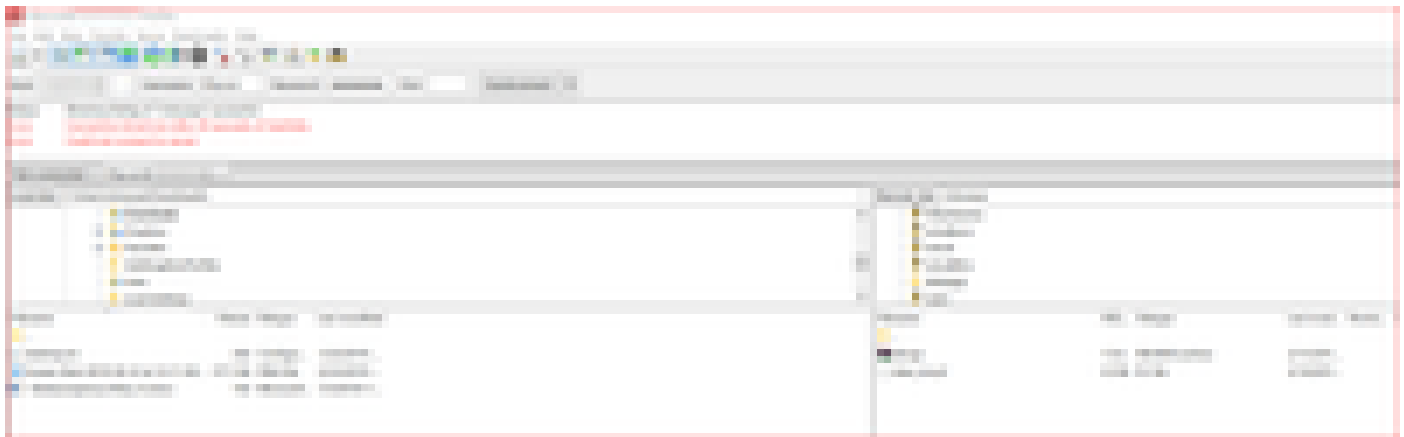

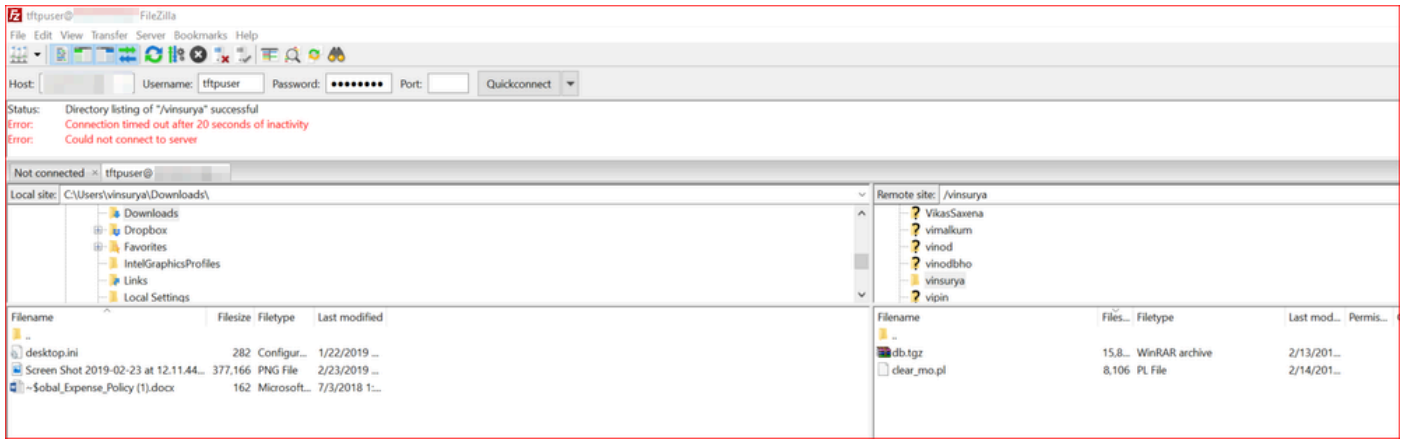

(c) Create the backup file.

2. Download and copy the backup file to local FTP server using client tool (FileZilla).

[Step applies in case of Remote copy to FTP not configured]

### 3. Download the virtual appliance image(OVA) of the UCS central from [Cisco Software Download site](#).

### 4. Install OVA on any Hypervisor host as a Virtual Machine or on a Bare metal host.

5. Access the VM from KVM console and select restore operation.

```

VM communication interface:                [ OK ]
VM communication interface socket family:   [ OK ]
Guest operating system daemon:              [ OK ]
Starting system message bus:                [ OK ]
Starting monitoring for UG VolGroup00:      2 logical volume(s) in volume group "Uo
lGroup00" monitored                        [ OK ]
Starting monitoring for UG VolGroup01:      1 logical volume(s) in volume group "Uo
lGroup01" monitored                        [ OK ]
Starting snmpd:                             [ OK ]
Starting sshd:                              [ OK ]
Starting xinetd:                            [ OK ]
Starting pmon:                              [ OK ]
Starting postgresql service:                [ OK ]
Starting console mouse services:            [ OK ]
Starting crond:                             [ OK ]
Shutting down pmon:                         [ OK ]
Validating the installation medium's disk (/dev/mapper/VolGroup01-LogVol00) speed
Average disk read speed measured: 221
Disk speed validation - Succeeded
Setup new configuration or restore full-state configuration from backup[setup/re
store] - restore_
  
```

6. Provide the network credentials along with the FTP credentials and the file path for transferring the backup file.

```
Setup new configuration or restore full-state configuration from backup[setup/restore] - restore
```

```
Enter the UCS Central VM eth0 IPv4 Address :   
Enter the UCS Central VM eth0 IPv4 Netmask : 255.255.252.0  
Enter the VM IPv4 Default Gateway : 
```

Restore operation can be done on a standalone system or the first node of a cluster. It is not required on the second node of the cluster.

```
Enter the File copy protocol[ftp/scp/ftp/sftp] : ftp  
Enter the Backup server IPv4 Address :   
Enter the Backup file path and name : DR-BACKUP-2.tgz  
Enter the Username to be used for backup file transfer : ftpuser  
Enter the Password to be used for backup file transfer : 
```

```
Proceed with this configuration? Please confirm[yes/no] - yes
```

—

Note: For UCSC versions **after 2.0(1u)**, the **decryption key** for **backup** file is mandatory for

---

backup restore operation.

---

Ensure the '**Password Encryption Key**' set in UCS Central. This key is required to decrypt the backup file during the restore process.

Password Encryption Key

Confirm Password Encryption Key

Password Encryption Key Set:: **Yes**

7. When the machine boots up, it comes up with the network credentials from the backup file along with the password option.

```
Cisco UCS Central
UCSC-151-DR login: _
```

8. Re-assign the network credentials from console, through the command option to get GUI access of UCS Central.

[ Step applies if the new IP config (from Step 6) differs from the IP of the source UCSC machine.

Refer to the Procedure, Guidelines and Recommendations :- [Changing Cisco UCS Central IP Address](#)

9. The UCSC GUI must be accessible through the IP address assigned, reflecting the exact fault state summary of the source machine.
