

# UltraM: VM Recovery after ESC Retry Expires

## Contents

[Introduction](#)

[Problem](#)

[Solution](#)

## Introduction

This document describes how to recover a Virtual Machine (VM) of Virtualized Packet Core (VPC) in Cisco Ultra Services Platform (UltraM) after the VM has been inaccessible for some time and Cisco Elastic Services Controller (ESC) tries to recover it.

## Problem

Compute node is removed (or inaccessible) in UltraM setup. When ESC tries to recover the node, but it is unable to do so because the node was inaccessible. This scenario can be simulated when you leave power cables from a compute node. One way to simulate this scenario is to remove power cables from Unified Computing System (UCS) blade. After ESC fails to recover the VM, it goes into the "ERROR" state under OpenStack and stays "booting".

In the example, the SF card 5 is on vnfd1-deployment\_s6\_0\_e03f87f5-63b6-4053-8d0f-0c9df963162c:

```
[local]rcdn-ulram-lab# show card table
```

| Slot   | Card Type                            | Oper State | SPOF | Attach |
|--------|--------------------------------------|------------|------|--------|
| 1: CFC | Control Function Virtual Card        | Standby    | -    |        |
| 2: CFC | Control Function Virtual Card        | Active     | No   |        |
| 3: FC  | 1-Port Service Function Virtual Card | Active     | No   |        |
| 4: FC  | 1-Port Service Function Virtual Card | Active     | No   |        |
| 5: FC  | 1-Port Service Function Virtual Card | Booting    | -    |        |
| 6: FC  | 1-Port Service Function Virtual Card | Active     | No   |        |
| 7: FC  | 1-Port Service Function Virtual Card | Active     | No   |        |

```
[stack@ultram-ospd ~]$ nova list
```

```
+-----+-----+-----+-----+-----+
+-----+-----+-----+-----+-----+
+-----+-----+-----+-----+-----+
```

| ID  | Name  | Status | Task State | Power State |

```

After ESC tries to recover the failed VM, it marks the VM as fail instances in OpenStack and doesn't retry to recover from now on.

Here are logs from ESC where VM recovery fails:

```

```

## Solution

1. Power up the computer with power on button and wait till hypervisor comes up:

```

[root@ultram-ospd ~]# su - stack
[stack@ultram-ospd ~]$ source stackrc
[stack@ultram-ospd ~]$ nova hypervisor-list
+-----+-----+-----+-----+-----+
| ID | Hypervisor hostname | State | Status |
+-----+-----+-----+-----+
| 3 | ultram-rcdnlab-compute-10.localdomain | up | enabled |

```

|    |                                      |      |         |
|----|--------------------------------------|------|---------|
| 6  | ultram-rcdnlab-compute-5.localdomain | up   | enabled |
| 9  | ultram-rcdnlab-compute-6.localdomain | up   | enabled |
| 12 | ultram-rcdnlab-compute-3.localdomain | up   | enabled |
| 15 | ultram-rcdnlab-compute-9.localdomain | up   | enabled |
| 18 | ultram-rcdnlab-compute-1.localdomain | up   | enabled |
| 21 | ultram-rcdnlab-compute-8.localdomain | up   | enabled |
| 24 | ultram-rcdnlab-compute-4.localdomain | down | enabled |
| 27 | ultram-rcdnlab-compute-7.localdomain | up   | enabled |
| 30 | ultram-rcdnlab-compute-2.localdomain | up   | enabled |
| 33 | ultram-rcdnlab-compute-0.localdomain | up   | enabled |

```
[stack@ultram-ospd ~]$ nova hypervisor-list
```

| ID | Hypervisor hostname                   | State | Status  |
|----|---------------------------------------|-------|---------|
| 3  | ultram-rcdnlab-compute-10.localdomain | up    | enabled |
| 6  | ultram-rcdnlab-compute-5.localdomain  | up    | enabled |
| 9  | ultram-rcdnlab-compute-6.localdomain  | up    | enabled |
| 12 | ultram-rcdnlab-compute-3.localdomain  | up    | enabled |
| 15 | ultram-rcdnlab-compute-9.localdomain  | up    | enabled |
| 18 | ultram-rcdnlab-compute-1.localdomain  | up    | enabled |
| 21 | ultram-rcdnlab-compute-8.localdomain  | up    | enabled |
| 24 | ultram-rcdnlab-compute-4.localdomain  | up    | enabled |
| 27 | ultram-rcdnlab-compute-7.localdomain  | up    | enabled |
| 30 | ultram-rcdnlab-compute-2.localdomain  | up    | enabled |
| 33 | ultram-rcdnlab-compute-0.localdomain  | up    | enabled |

## 2. Identify Instance ID in Nova List:

```
[root@ultram-ospd ~]# su - stack
[stack@ultram-ospd ~]$ source corerc
```

```
[stack@ultram-ospd ~]$ nova list | grep ERROR
```

```
| 085baf6a-02bf-4190-ac38-bbb33350b941 | vnf1-deployment_s6_0_e03f87f5-63b6-4053-8d0f-0c9df963162c | ERROR | - | NOSTATE |
```

### 3. Initiate manual recovery on ESC with the CLI and instance ID from previous step:

```
[admin@ultram-vnfml-esc-0 ~]$ cd /opt/cisco/esc/esc-confd/esc-cli
```

```
[admin@ultram-vnfml-esc-0 esc-cli]$ ./esc_nc_cli recovery-vm-action DO vnf1-deployment_s6_0_e03f87f5-63b6-4053-8d0f-0c9df963162c
```

Recovery VM Action

```
/opt/cisco/esc/confd/bin/netconf-console --port=830 --host=127.0.0.1 --user=admin --privKeyFile=/home/admin/.ssh/confd_id_dsa --privKeyType=dsa --rpc=/tmp/esc_nc_cli.hZsdLQ2Mle
```

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<rpc-reply xmlns="urn:ietf:params:xml:ns:netconf:base:1.0" message-id="1">
```

```
<ok/>
```

```
</rpc-reply>
```

### 4. Check logs, OpenStack Horizon to confirm that the instance has been recovered:

```
[admin@ultram-vnfml-esc-0 ~]$ tail -f /var/log/esc/yangesc.log
```

```
